Hello all,

since the end of February the database of radio-portal contains more than
25.000 hobby related links for SWLs and radio amateurs. I take this
opportunity for a short notice. :-)
If you have not tried the various search options before, click on "FAQ" for
an explanation.

As a special service for newcomers there is a separate search option for
hundreds of radio related FAQs:
http://www.radio-portal.org/elmer.html

Hello and thanks for your reply. The currently cordless phones we are using has a transceiver that hooks into a rack and the phone line is connected to it. That is high up on the wall and the phones are really talking to that wall unit. But the way the office is set up, it can be a maze.

Ike, do you mean Type 2 800 or Type 2 900. I see no mention of Type 2 200
in the 780 manual. Also remember that for each trunking frequency you
program into the 780, you must press and hold the Trunk button for at least
two seconds after entering the frequency for each channel until the 'M'
shows on each channel in the group, otherwise, it won't work too well.

It used to be that way years ago. I buy my gear from a small ham radio shop in Indiana and that is still the way he does biz (only after he gets to know you). It is a shame that a great hobby like ours is contaminated by a few bad people that ruin it from the rest of us. I guess there is no going back.

Then the problem obviously lies with the way you programmed the radio
(since the other radio works side by side). Make sure you've set
these freq's as TRUNK freq's and that the system type is set
correctly.

The majority of the Fast Food chains across the USA can be found
on one of the following frequencies:

30.8400 --- 154.5700
33.1600 --- 154.5150
33.4000 --- 154.5400
35.0200 --- 154.6000
154.5700 --- 170.2450
154.6000 --- 171.1050
457.5125 --- 468.4875
457.5375 --- 468.3875
457.6125 --- 469.8875
457.5500 --- 467.7750
457.6000 --- 467.8250
469.0125 --- 464.0125

A fairly current list of Fast Food frequencies is avaiable at
the following http://www.grove-ent.com/EXfastfood.html

Depends what you want it to do really..

Personally, I would recommend the Uniden Bearcat 9000XLT as a perfect base station scanner,

As for handheld's, im not to sure.. ive only had 2 handheld's, so i dont have much to compare to really.

Hope this helps,

Thank both of you for your suggestions. It is set to Type 200 and Freqs are sets as TRUNK. I have deleted the frequencies from the most distant tower. It picks up the frequencies WHEN in manual but not on TRUNK, and then the signal is not very strong. So I have just about decided to wait until it warms but and quit raining and I will do something about my antenna. If that doesn't help I will just box it up and store it. I have read that manual over and over and I believe I am doing what I am suppose to. Maybe I'm too old to mess around with a scanner that is that advanced!!!!!!

I totally agree, I for one when I seel something over the internet do
cash the check or money order when I get it then put the money away
till I hear form the purchaser that he is satisfied with the item, the
last thing I need is to find out he is not happy and it is comeing back
to me and then I have to scramble to find the cash to send back to him.
I still have $200 USD in my wallet form the last item I sold on the net,
been there for 2 weeks now, as shipping form Canada to the USA seems to
take that long or longer sometimes.

Full refund including SHIPPING charges both ways!

> YOU have caused MANY problems here.

Because I (and many others) won't let you get away with your inane behaviour, you think I (and others) are causing trouble in the newsgroups. The truth is, it is YOU Toilet Boy who is the trouble maker.

> WHEN was the last time YOU posted ON TOPIC to this newsgroup?

ROTFLAMO!

When you get caught in one of your lies, you always do one of three things.

You: 1. Absolutely deny any wrong doing.

2. Divert attention from your lie(s) by demanding to know when your accuser has posted on topic.

3. Do both number 1 and number 2 above.

You think if you deny the lie(s), they didn't happen and if you deny them long enough, they'll go away. Guess again, Toilet Boy. The lies won't go away and the people telling you they remember your lies won't go away.

It continues to boil down to this inescapable fact: You, John 'Toilet Boy' Mackey are still a liar, fraud, and a hypocrite. Now we can add wuss to that list.

I think your problem is here. There is no tyoe 200. There is a "Type 2 - 800" or "Type 2 - 900". If the frequencies are in the 800 MHz range, you set it to Type 2-900. If the frequencies are in the 900 MHz range, set it to Type 2-900.

If you're listening to a public safety system, it's probably 800.

32. NEED: Male power connector plug for Bearcat BC245XLT

Newsgroup: rec.radio.scanner
Date: 2001-03-02 03:12:05 UTC
From: bobbydavis@yahoo.com
Message-ID: <3a9f0df3.6510341@news.earthlink.net>
Source record: 69271

I want to adapt by old Bearcat 200 car power cable to my new 245 unit.
I cannot find the correct male plug to use. The closest I have found
is a 1.1mm (Inner Diameter)/3.5mm (Outer Diameter) but the inner
sleeve is too narrow.

I examined the AC adapter's plug and it looks like the inner diameter
is actually a bit larger. I've been looking in specialty electronics
stores but cannot find a 3.5mmOD plug with a greater ID than 1.1mm.

Does anyone know where this plug can be found?

Thanks to all.
Fred

34. ICOM R3 info.

Newsgroup: rec.radio.scanner
Date: 2001-03-02 03:14:37 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <97n36s$7fo$1@coranto.ucs.mun.ca>
Source record: 69273

Can anyone tell me of any serious problems with the ICOM R3 receiver?

I ask because I know while ICOM always make good receivers, they
also tend to make them expensive to repair or maintain. A good
example is that some software including the original ICOM software
for the PCR1000 can change the data in it's EEPROM and make the
radio not work correctly. The it cost $$$ to have ICOM repair it.
You can get a software program on the net to save your original settings
but that's another story.

Also the ICOM R71A and R7000 have a small battery to hold values
in memory. If the battery is not changed correctly you have to
send the radio back to icom to be setup again. This cost $$$.

I don't hear of problems like that from other radio companies so
I wonder if ICOM did any strange things to what looks like a nice
radio.

One last question. If you use it to receive wireless cameras used
in racing cars at the race track, what range does it have
and can you search for video signals like audio ones or do you need
to know the frequency?

ICOM has some great radios like the R10 and (R9000 but way over priced).

I have used a cell and drove. I find it more distracting jsut cause I am trying to hear or concentrate on what the person is saying. so I stopped doing it. I have used my ham radio. it is less distracting. but it IS distracting. maybe it is cause wher eI have the speaker located. But I still find cell use more distracting thought. I have had a few accidents due to the other driver being on the phone. but some drive good. IMHO whatever you are doing in a car is distracting. but a CELL is worse then them all.

you need to build a 2lvfsk or 4lfsk. 4 levels are harder to build though. the 2 is easy. just a few wires and a 8 pin IC. and it will help you listen to packet on ham bands and so on. I won't say what all it can do. but it will help you much more. Due to using the comport and not a soundcard. I use the pcr-100 with the discrim mod and works great. are you sure that the mod actually worked. do you hear anything when you hook the discriminator tap to the input of the soundcard. ?

yep. stuff from there. I got a scanner once. it had something wrong with it. The worker asked what was wrong. I told him. He turns on the scanner and tries to act all that and tries adding a frequency. I had to wait there for 15 mins for him to try and program it. yay. we all know how to program radio shack scanners and/or uniden scanners. They are mostly all similar programming. anyways. after the 15 mins. he gives up and goes int he back and cannot find a replacement. So he gives me the one that is display. I said that was stupid. but took it anyways, since I hate to have a repaired and retuned scanner. Worse problems then the usual display model. I got a frequency counter there last year. They were, you guess it. Out. I had to take the display model again. the only good thing is that they left brand new batteries in it.

Went there recently and they did not even serve us. So we left. These employees spent their time playing on the internet then serv us. As usual they were once again using the computers they were selling. lol.

If we all became rich then we would not have to complain. Start a chain and laugh.

i've had a few experiences with radio schack in the past few weeks. i got my income tax back so i decieded to get back into scanners again. i was going to go to wal mart and get a uniden 100 channel but decieded to go rs. they had a 200 chanel for $129 and a thousand channel for $200. i got the 200 channel. it had some preset freqs for racing in 400 area. i don't go to racs so it didn't matter. i thoght about it and decieded i messed up not getting 1000 freq for just a little more money. i about used up my 200 freqs. so i went back to get one. but tey were out. so the lady said she'd go to another store to get a new one and have it by 9:00 am monday morning. so i go 8 miles to caldwell to get the radio. she's not there and neither is the radio. so they send me to the nampa mall. the guy is schocked i'm coming to his store to get a radio i paid for in caldwell. he goes into the back and gets a radio for me. he tells me it's a floor model. i start out the door but before i do i want to look at it. it has a big scratch on it. one book is missing and the other one has writing all over it. i say i'm not taking this. so i call the first store who tells me to go to meridian 12miles up the road. well they do have a brand new one. i was satisfied at this point but latr on i decieded to buy a power supply. i go back to caldwell to get one. the girl gets the power pack and puts in the tip for the power supply. she tells me this type takes positive tip to front blah blah blah. i take it home plug it in to the scanner and it only turned on one second then it would go out. i took the scanner and power supply back and she tried another one. it didn't work either so we decieded when her new supply of radios came in she would exchange it. well i thought that was great so i went in today to exchange the radio. another girl was there. i told her i wanted to exchange the radio. she decieded to try another power supply but she told me this is a neg tip power supply it needs to be put in neg. the first girl one week ago put the tip on backwords. end of story. don

You're lucky the story didn't end at "I powered up the radio (or let someone else do it) with reverse polarity and now it's dead. Radio Shack won't give me a refund/exchange."

The moral is, once it's yours, it's yours and you shouldn't let them touch it EVER! It wouldn't be inconceivable for one to et screwed in that situation.

Hello there,

I am looking for a Radio Shack DX-394 shortwave receiver. Please email me if you have one for sale, and the price you are asking. If you have a picture of the radio that would be very helpful.

Cheers,

Richard.

Bearcat III- HI/LO
Bearcat IV- HI/LO/UHF

Both are very clean, in great shape; w/ power cord & antenna. Both have good volume & squelch controls, are LED indicators working.

However, no receive on either one. Maybe my crystals, or possibly a simple repair.
Selling as is, your choice for $25 delivered.

lmk

HAMFEST March 4, 2001 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB and SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - March 4, 2001

LINDENHURST, LI - NY

On March 4, 2001 the Great South Bay Amateur Radio Club will again
sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and access-
ories, software, books, technical manuals, ARRL information, Amateur Radio
License Exams, Door Prizes.

Advanced registration is $18.00 each table. Tables at the door are $25.00
each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations.
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no
charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst.
For exam candidates please remember to bring your original FCC Amateur
Radio license (if licensed), any C.S.C.E. forms that are pending, plus a
photocopy of each, pens, calculator, formal form of ID (preferably photo
ID), and the examination fee, to the exam session. Current ARRL/VEC fee is
$10.00, exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights
of Columbus Council.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 PM following the Newsline Report on the W2GSB
repeater, 146.685 -600 136.5 PL required. You may also write to:

Check Strong Signals site:
http://www.strongsignals.net

reviews on most newer units.

A friend has one and is quite happy with everything save for the fact that the Video screen EATS BATTERY PAOWER MUCHO FAST and the DC plug makes the screen go nuts.

As for frequencies a check on any of the sites devoted to race frequencies will be the best bet.

Antenna Specialists (and other after-market producers) make splitters
for the radio antenna to hook to your scanner - you'll probably hafta do
like I did and buy what you can find and re-do the connectors with
adapters or the different style that you need...

I use Radio Shack catalog # 270-031 power cord. It's made for radar detectors, but works great with the BC-245, BC-230, Pro-90, etc.

Im getting some extra cash soon with the sale of the Bearcat,

Now im interested in getting myself a YUPITERU MVT-7300 for around $680 i think...

Does anyone have any thoughts or experiences about these scanners?

The specs look good, but there arnt any reviews out on it yet from what i can tell..

MAIN FEATURES:

Frequency Coverage: 531kHz - 1320Mhz continuous
Modes of FM, WFM, AM, NAM, USB, LSB, CW
Step sizes: 50Hz, 100Hz, 1kHz, 5kHz, 6.25kHz, 8kHz, 9kHz, 10kHz, 12.5kHz, 15kHz, 20kHz, 25kHz, 30kHz, 30kHz, 100kHz, 125kHz
1000 memory channels (10 banks 100)
10 user programmable search bands
Green or Orange LCD backlight
Scan/Search Speed: 30 channels/steps per second
Antenna: BNC
Size: 60mm (w) x 120mm (h) x 32mm (d)
Weight: 310g

Would love some feedback, coz i dont know what kinda handheld is good. as i said before, this one looks great, But i would prefer some brand thats kick ass, and has good reviews..

the AOR series maybe?

thanks,

Digitalebola

U.S. energy beam lightly scorches protesters - "Easier than an a-bomb"
by John Chipman The National Post 03/01/2001

http://www.nationalpost.com/home/story.html?f=/stories/20010302/489908.html

The Pentagon unveiled its latest weapon yesterday, a non-lethal beam that fires electromagnetic
waves at the skin, heating it instantly to painful levels without internal or permanent damage.

Touted by enthusiasts as the biggest military development since the atomic bomb, the Vehicle
Mounted Active Denial System (V-MADS) is easily transportable and is considered ideal for "crowd
control."

By using certain portions of the electromagnetic spectrum, it penetrates the skin to a depth of
about 1/64th of an inch.

Used properly -- that is, for less than three seconds -- it causes no serious long-term injuries.
The U.S. Marine Corps, which developed the V-MADS over the past 10 years along with the U.S. Air
Force, would not say what happens if the weapon is misused.

"This is going to save lives," said Major Dave Anderson at a briefing in Washington yesterday,
where a model of the weapon was on display. "It gives the commander another option that is not
deadly force ... We are very excited."

Easily mounted on a vehicle or a roof, it can be fired from up to 750 metres away, making it
especially useful in dispersing crowds.

"I can tell you we have no plans on using this on Canadians," noted one U.S. official yesterday.
"We don't see our embassy in Ottawa being besieged any time soon."

Maj. Anderson said the waves utilized by the V-MADS fall between microwave and infrared rays on
the spectrum.

The waves, whose exact length, frequency and amplitude are classified, cause water molecules in
the skin cells to vibrate. That rapidly produces heat and causes discomfort. The invisible waves
can pass through clothing but halt just beneath the skin's surface.

Maj. Anderson said the heat irritates nerve sensors in the skin but does not damage internal or
reproductive organs. The weapon's beam has no effect on electrical equipment, such as pacemakers
or computers.

Project officials said the human body begins to feel pain at about 113 degrees Fahrenheit. The
V-MADS weapon heats the skin to about 130 degrees Fahrenheit in less than three seconds.

"I lasted about a second before I pulled my hand away," said Maj. Anderson, who described the
sensation as similar to touching a hot light bulb. The sensation stops, with no lingering effects,
as soon as the person leaves the beam's path.

A report this week in Marine Corps Times described the technology as rivaling the atomic bomb.

"That's a bit of a stretch, but it's in the ball park at least," said John Pike, director of
GlobalSecurity.org, a Washington defence policy organization.

He said it could be a very useful tool during peacekeeping missions in which outnumbered soldiers
must disperse a hostile crowd without causing any permanent injuries.

"What they want is something that will heat people up enough that they will run away, but not heat
them up so much that they will explode," Mr. Pike said, adding it is too early to tell whether it
will be effective.

First, scientists must continue tests to guarantee V-MADS is truly non-lethal, he said, and then
convince a skeptical public.

"I think the first problem will be difficult and the second problem will be very difficult," Mr.
Pike said.

Military officials say the effective range of 750 metres means V-MADS would allow soldiers to
remain outside the reach of most small arms fire.

Scientists are developing a vehicle-mounted version, and Maj. Anderson added they are also looking
at plane-, ship-mounted and hand-held models. The weapon will not be ready for field use until at

least 2008.

Maj. Anderson maintained that people's involuntary reaction to resist pain will force subjects to
flee before the weapon can do any permanent damage. But the V-MADS' operator will determine how
long it is trained on a subject, and when pressed, Maj. Anderson admitted it could be dangerous if
used improperly.

While military officials say its development cost -- US$40-million over 10 years so far -- and
complexity will keep it out of enemy hands, Mr. Pike was not convinced.

"It's a heck of a lot easier than an atomic bomb. Just do the math, the military said it spent
less than $50-million developing this thing. There's a heck of a lot of countries that have
$50-million to spend."

And with that comes the threat a rogue state such as Iraq could develop a more dangerous version
and use it against American troops, he said.

"The fact that Captain Kirk says set the phasers on stun, definitely means the phasers have
another setting. Just because the Americans have them set on stun does not mean the Iraqis
would."

we.. first of all. it is illegal to own ham equipment without a licence. and not sure how you even bought it. but anyways. Sounds like you are alteast gonna try getting your licence. I am not 100% sure of what is on the US side of the test. canada only has two types of licences. basic and advanced. besides morse. anyways.

Study the block diagrams lots. things on the antenna's and types of antennas. how to figure out a wave length from a frequency and vice versa. sounds hard but it is pretty easy and straight forward. There are a few more things to really study. but I forget them at the moment. I guess I should look over the study guide. but I only have had my licence for 5 years. if I knew what would be on the US test. I could help more. But, some of the things we don't have to learn on the test in canada. Go to your local radio shack. They usually have info on your local ham clubs. some clubs teach classes. I found out that way and passed.

Hope you lots of luck and congrats for when you get your licence.

Wrong. It is only illegal to transmit without a license. Many - if not most - hams build or buy their equipment first, then use the receiver to learn morse code and amateur procedures.

Zoof

No, it's not.

It is illegal in the USA to _TRANSMIT_ using ham equipment without the
proper license. Anyone can use ham gear to receive.

Barry

What a wonderful time we live in. What type of monster would sit around thinking of ways to heat people up in an effort to control them? I guess madmen like this will never be happy until they either kill us all off or are able to fully control us with their technology. If these people are not stopped, can you even imagine what our future will be like? Concepts like freedom, individual rights, and self-determination, will cease to exist.

Three seconds is a long time to hold a narrow beam on a moving target.

Especially if that target is merrily cranking off lead in the direction
of the one with the scrooch gun.

National Incident Notification Network has been in Full activation since February 1,2001

As a place for all the scanner buffs or scanner nuts across the USA. To enjoy our hobby and to share interesting events with others, Dispatchers are All Volunteer they Dispatch for the joy of the hobby.

NINN is in it's developmental stages but I am confident that this Service will become a valuable tool for Emergency Service Providers, Fire Service, News Media. Basically People that would benefit of Having Information of a Major Fire or Hazmat situation just around Corner

If you have a scanner you can become a Dispatcher,
Monitor the events in your area, something big happens,
Post It! The alert pages are very user friendly, if you still are unsure,
Email the list owner and I would be glad to assist you.

If you want to be part of the action a short Dispatcher Application. Is available here, http://www.ninn.net/dispapp.html

NINN Main Page http://www.ninn.net/
NINN Oregon Chapter http://www.ninn.net/states/oregon

The CE-232 does not blank out the LCD on the 2006, the LCD is not going to wear out in your lifetime, its the backlight that people have problems with.
What you are looking at is the CE-232 wIth Pro-Turbo uses the scanner and all its circuitry, that includes the CPU and memory.

The 456 (note the 4 in there, which means this was supposed to work in the 2004 and is what I was told by them when they were letting out a little info about it) does not use the memory or CPU in the 2006, the 456 has its own cpu that takes over the CPU of the 2006 and the memory that it uses is your computer memory or hard drive space.
Disconnect the computer from the 456 and now you have your 2006 back and none of the frequencies that you had when running on the computer

The CE-232 and Pro-Turbo use's the memory in the scanner and will also use any extra memory that you may add to it, e.g. the 6,400 memory MOD in BIll's books or even the 25,600 memory MOD, you also need to add the KEYBOARD MEMORY CONTROLLER from his books for it all to work.

>
>How do the two setup compare for say basic scanning duties?

THe CE-232 and Pro-Turbo work very well and the nice thing is it programs your scanner so when you do not have you computer hooked up to it you can still have the channels all programmed.
I almost always have Pro-Turbo running on my computer, it does everything I have a need to do.

>
>I'm not a programmer so I cant see myself writing scripts
>for the 232.
You don't need to be a programmer to use script's, or even write them, there are plenty of them out there that you can use. There are also the ones that most people will use as part of the program itself

>
>Any comparisons welcome.

Check out what you can do with Pro-Turbo at

http://members.home.net/pro-turbo/index-main.html

or

http://www3.sympatico.ca/len.c/

and you can download the documentation for it at

http://www3.sympatico.ca/len.c/downinfo.htm

or

http://members.home.net/pro-turbo/downinfo.htm

I heard about this about a month ago, but it's been around for awhile.
Masers were the first indication that this stuff existed. Add a simple
focusing lens and a bit of research, and you have a long-range BBQ ray
gun. The scary part is that different organs resonate at different
frequencies - the skin, brain, eyeballs, liver, etc. The operator can
simply dial up a menu, point and fire. With good selectivity, it could
possibly nuke someone without damaging their surroundings, even inside
their home. I can only speculate, but the US govt habit of testing its
secret weapons on an unsuspecting public makes me think that this
weapon may be responsible for some cases of "spontaneous combustion".

Way to go Toilet-Boy. Even with your little pretend friends its

300 actual users hate Toilet-Boy
4 pretend people support Toilet-Boy

Keep working at it Toilet-Boy but try and find some support that has been on
Usenet longer than a day or two.

I assume those must be Canadian dollars. An 8500 only costs about $1400 US.

The power supply makes the screen go nuts because it isn't meant to power
the R3, it's just a battery charger. Your friend needs to buy an ac adapter
with a higher current rating.

sorry. I thought I added that about transmit. oops. th only thing they won't let you do here is buy the equipment from a store. but if you buy it elsewhere it is NOT illegal. as you all said except transmit. I guess I should re read stuff better before I post. I hope the originator of this post still good luck with the test when he does it. It is nice to see our hobby grow.

Hi,
My UK 8200 developed a corrupt eeprom while resizing memmory banks. Could someone please be kind enough to send me a UK 8200 EEPROM dump (you can dump your eeprom
with ARC software, see www.butel.nl) so that I can have my canner functioning normally again? I love my 8200.

Thanks in advance!
Thomas
thomas@asan.com
P.S. My 8200 is version one but has the newest firmware (I sent it to the factory
for an upgrade).

Dwight, I am 96% sure that hams were involved in the design of this project.
You know...those strange dweebs who wear 3 or more HT's on their belt
with coke-bottle glasses, who are highly sought after by engineering deparments
of defense contractors? They've just found a way to project the "RF burn"
effect outward. Probably by finding the resonant fredquency of the cellular
membrane of human skin and tuning a transmitter to that frequency.
(aKa: it's a microwave oven without a door and little lamp for people)

Probably something dreamed up by an eccentric cloistered ham in NY or NJ who sells
tubes on the weekends at hamfests...

More like big profits for some contractor Dwight, who'll sell this equipment
to the military for a 50,000% inflated price - remember the $1500.00
toilet seats? There back and Busch Jr. is in the white house - scary.

109. Need Cody Wyoming Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-03-03 14:30:13 UTC
From: GKeown <keown@io.com>
Message-ID: <3AA0FFF5.660F@io.com>
Source record: 69148

I posted this here a while back but did not receive much feedback, so I thought I would try again.

I am looking for info on public safety frequencies being used in the Cody, Wy. area. I have the data available from PerCon and Radio Shack's Police Call, but I need to know which of those frequencies are actually in use and by whom, etc.

I am about to move to that area and my VHF monitor has to be shop programed...I would like to get that done before I move since I have a friend who will do it free here) and I don't want to program in a bunch of unused or unwanted frequencies.

I am interested in state, county and municipal frequencies.

Thanks.

Hmmmm, seems like if this were used in a "crowd" situation, those at
the back (read that closest to weapon) could become "toast" when a
"panic" to evacuate the area ensues (like everybody trying to
'bottle-neck' it thru a door or small escape route). Or when someone
passes out or gets injured from the mad rush, they wouldn't be able to
get out of beam's path.
Bet the guy that came up with this was one of those Dumb-A** people
that stuffed a Poodle in a microwave to dry it off!!!

Doh!!! =---> Poooffff!!

Yes, such an automatic power strip exists, but they are very hard to find.
I recently bought a Woods No. 15719 from
http://www.fcsurplus.com
at a very reasonable price. Although this one was new in the box, they are
apparently not available anymore except as surplus. This Woods unit is also
a surge supressor. It has a master outlet, 3 switched outlets, 3 unswitched
outlets, and a phone line-protection jack. It also has an sensitivity
adjustment for the switch feature. I think you need to make sure that the
master device draws enough current to operate the switch. I'm using a
computer, which works fine.

126. John 'Toilet Boy' Mackey and Off Topic Posts

Newsgroup: rec.radio.scanner
Date: 2001-03-03 21:10:08 UTC
From: Richard Kendrick <n7nt@primenet.com>
Message-ID: <3AA15DB0.3667E6BC@primenet.com>
Source record: 69165

Toilet Boy, you seem terribly fond of accusing people of posting off topic, especially when you are caught in another one of your lies. The persistent lying aside, your complaints about off topic posting would be all well and good if you weren't such a hypocrite the matter. Let's see just how big of a hypocrite you really are.

I've analyzed your postings over the last six months and the numbers speak for themselves. All of the posting came from the period September 2000 through February 2001 and were sorted into four categories. They are:

1 - On Topic: Technical content such as advice about equipment modifications, how to build antennas, etc.
2 - On Topic: Nontechnical content such as posting frequencies, etc.
3 - Off Topic: Rants about Bill Cheek.
4 - Off Topic: Rants, lies, and other verbal stupidities.

And the numbers:

Month/ Year	Total	Category 1	2	3	4
SEP 2000	51	0	1	0	50
OCT 2000	70	0	0	3	67
NOV 2000	100	0	1	3	96
DEC 2000	44	0	0	13	31
JAN 2001	73	0	1	5	67
FEB 2001	111	0	1	22	88
Totals	449	0	4	46	399

Average Messages Per Month: 74.8
Percentages: On Topic (total): 0.9%
Off Topic (total): 99.1%
Rants about Bill Cheek: 10.2%

The data clearly shows that you, John 'Toilet Boy' Mackey are a hypocrite. The data also shows that you've wasted a lot of bandwidth on inane ramblings, something you've also accused others of on many occasion. When you deny being a hypocrite, you are a liar. As you're so fond of saying, it's "proof positive".

So, the next time you accuse someone of not posting on topic, we can confidently say "Now Toilet Boy, don't be such a whining little wussy. You know you're a hypocrite and a liar when you make such

accusations."

Come on, there were never $1500 toilet seats, this is the standard method to hide black projects, inflating prices for authorized non classified projects. At least Bush won't be selling the classified stuff to the Chinese.

135. ICOM PCR1000 EEPROM PROBLEMS.

Newsgroup: rec.radio.scanner
Date: 2001-03-04 01:09:17 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <97s4jt$d8j$1@coranto.ucs.mun.ca>
Source record: 69178

Can anyone tell me who well the PCR1000BUR 1V2 software calibration and eeprom back up program works?

The ICOM IC-PCR1000 has problems with some software corrupting the EEPROM. ICOM can fix it with a software program called EX2099, some test equipment (frequency counters, scope, multimeter, etc) and about 3 hours work.

The PCR1000BUR program claims it can do it in software in minutes. Does this program calibrate the ICOM as well as the EX2099 or does it just get the radio back to acceptable values to use the radio but not fine tune for optimal performance like EX2099?

Any other software out like this better or worse?

136. ICOM PCR100 with problems too?

Newsgroup: rec.radio.scanner
Date: 2001-03-04 01:12:27 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <97s4pr$d8j$2@coranto.ucs.mun.ca>
Source record: 69177

Does the ICOM PCR100 have EEPROM problems like it's big brother
the PCR1000?

Does the PCR100 have VSC and notch filter?

What features are missing from the PCR100 besides SSB and
DSP compared to the PCR1000?

In Canada, it is illegal to own Amateur Transmitting Equipment without a
license (note Canadian spelling of "Licence" in original post). Not
enforced
but could be a hassle. I travel in Canada and have lived there in the
past.

While BUD was prematurely thinking:

In Canada, it is illegal to own Ham Gear without a license and yes
along the Border, the Telephone & Wireless stuff get blurry so Bell
Alantic and Bell Canada intertwine. (Verizon handles wireless in the
Niagara Region) (ALSO, see spelling of LICENCE (Canadian))

If you backed up your eeprom before the curruption with PCR1000BUR . then
you could restore the eeprom with the original or working backup. the
calibration and such is all programmed into the eeprom, that is to my
knowledge. but I do not own a 1000 yet. just a 100.

What difference does it make Toilet-Boy, you will twist it around, demand verification and then when confronted with the truth you will start all over again with a lie. What I am saying is your only supporters don't exist. Never a person that has a known name always a new one and gap tooth slobbering John-Toilet-Boy Mackey pretending someone actually believes his tripe. Lie on Toilet-Boy it is what you do best. It is all you do. Nothing radio related. Nothing of substance just Toilet-Boy in fantasy world. His own personal and private circle jerk. The best a bed pan changer like you can do Toilet-Boy.

Lets not make this a political issue, or divide ourselves by trying to blame individual groups. Its not about Democrats or Republicans (the research had to have started while Clinton was in the White House, but I don't doubt Bush will love it).

Instead, this is about everybody outside of the power elite, and _ALL_ of us will have to live with this stuff in the future.

Your attributed the above to the wrong person, W4JLE. I didn't write the material you quoted - it was written by someone else in reply to something I had written earlier. And you may want to read what I wrote in reply to that (about not turning this into a political debate between the two parties).

Can someone tell me if the Radio Shack Pro-2017 can be modified to receive cordless telephone frequencies? It appears to have the frequency range.

I have a friend who purchased one.... for what reason I'm not sure, but she would like to be able to receive cordless telephones... Is this model capable of doing the job?

```

Since it's stated purpose is "crowd control," I don't think that the beam on the fully functional unit will be that narrow. Since it's vehicle mounted, one could sit inside an armored vehicle, or in a concealed position, to use it.

Just for kicks, what happens if it is left on for say 2 minutes instead of the recommended 3 seconds. Do you come out looking like a cup of coffee hot from the microwave? What if you put it in a storeroom in a skyscraper, preset a timer, and just left it on?

The possibilities are endless...and a little scary.

At time I got the EEPROM corrupted without having a backup.

I tried several backups available on the net and compared them.
IIRC I used Talk-PCR to write to the EEPROM.
Also had some values in mind how the PCR1000 worked under stable
conditions on some steady signals.
At least I got it back working without any measuring equipment, with a
bit better selectivity and sensitivity as it was by factory
default.....I think :-)

I don't own a PCR1000 for 2 years now... has been a nice toy :-)

160. FDNY is going digital on the fireground

Newsgroup: rec.radio.scanner
Date: 2001-03-04 12:45:18 UTC
From: fd347@aol.compostpile
Message-ID: <20010304074518.16506.00000341@ng-mh1.aol.com>
Source record: 69099

The new handy-talkies (Motorola XTS-3500R) are going into service the first week of March 2001. There are 2 types, model 1 (for engines, ladders, battalions, and special units) and model 3 (for division chiefs and above).

The major difference between the two is that the model 1 radios will not have an LCD display nor will they be able to go to any zone but zone "A". However, battalions and units in SOC will have 3-zone capability. Model 3 radios will have 3 zones, A, B, and C.

Aside from the fact that these radios will use UHF, the major advantages over the Sabers and MX330's are the additional channels for secondary or adjacent incidents, and additional command channels. Under the old system there was only 1 fireground frequency and 4 tactical frequencies. Now there will be 2 fireground channels each with it's own command channel.

Here is the channel plan as it is now:

ZONE "A" Models 1 and 3 - Fireground and Repeaters
Ch 1 HT 1 Fireground Simplex
Ch 2 HT 2 Fireground Simplex
Ch 3 HT 3 Fireground Simplex
Ch 4 Queens Fireground Simplex
Ch 5 Brooklyn Fireground Simplex
Ch 6 Manhattan Fireground Simplex
Ch 7 Bronx Fireground Simplex
Ch 8 Staten Island Fireground Simplex
Ch 9 Hi-rise In-Building Repeater
Ch 10 Battalion Mobile Repeater
Ch 11 Subway Repeater 1
Ch 12 Subway Repeater 2
Ch 13 EMS/Fire Fireground
Ch 14 Railroad Repeater
Ch 15 Unassigned
Ch 16 Unassigned

Channel 1 is designated as the primary tactical channel. All units will use it in the same way we used 153.88 in the VHF system. Should a second incident occur nearby those units will use channel 3 as their primary tactical channel.

If the incident on channel 1 escalates the staff chief on scene will use channel 2 as a command channel. If the incident on channel 3 escalates that chief in charge will use either channels 4, 5, 6, 7, or 8 depending on the borough.

ZONE "B" - Inter-agency and Select Communications
Ch 1 Interoperability - Citywide

Ch 2 Interoperability - Manhattan
Ch 3 Interoperability - Queens
Ch 4 Interoperability - Brooklyn
Ch 5 Interoperability - Bronx
Ch 6 Interoperability - Staten Island
Ch 7 Not yet assigned
Ch 8 Not yet assigned
Ch 9 Not yet assigned
Ch 10 Not yet assigned
Ch 11 Not yet assigned
Ch 12 Not yet assigned
Ch 13 Not yet assigned
Ch 14 Not yet assigned
Ch 15 Not yet assigned
Ch 16 Not yet assigned

ZONE "C" - Dispatch Communications
Ch 1 Not yet assigned
Ch 2 Not yet assigned
Ch 3 Not yet assigned
Ch 4 Not yet assigned
Ch 5 Not yet assigned
Ch 6 Not yet assigned
Ch 7 Not yet assigned
Ch 8 Not yet assigned
Ch 9 Not yet assigned
Ch 10 Not yet assigned
Ch 11 Not yet assigned
Ch 12 Not yet assigned
Ch 13 Not yet assigned
Ch 14 Not yet assigned
Ch 15 Not yet assigned
Ch 16 Not yet assigned

To my knowledge there are no guidelines at this time governing the use of zone B. In my opinion it looks like it will be at least a year before dispatch (future zone C) is converted over.

I regret that I do not have the actual frequencies for these channels at this time. But since these are digital radios it really doesn't make a difference. . . yet. Notwithstanding that, as soon as I learn the frequencies I'll post them here.

I have a RS scanner that has lost audio output. It has been modified to receiver cellular and speed up the scan rate, so RS has told me they won't touch it until I "unmodify" it. The circuit board etchings indicating which diode is in which solder position on the circuit board are illegible. Can anyone help?

What kind of anti American rock did you crawl out from
under ? This weapon is a NON lethal tactical weapon. I
suggest you put your sorry ass in a "peace keeping", or
"law enforcement" role that US military forces deployed
on in the past - and then when a hostile crowd (a crowd
including both military and civilians), is intent on
decaptitating your head and carrying it around on a pole,
you come back here and report how you shot and killed all
the women and children brandishing knives... or would you
rather hold your fire and give up your life - because you
have such moral ideals.

If my men are under fire by civilians, and if I have a non lethal force option to employ, i will use it, but, given the absence of one, escalating to lethal force is the last alternative.

Any professional soldier will tell you they do not wish to harm civilians, this is the impetus for this new technology. It is an effective deterrent, publicity not withstanding.

And before you shoot your socialist mouth off, I suggest you remember the incident in the streets of Mogadishu, Somalia back in 1993. Where the body of a US Army Ranger was being dragged naked thru the streets, an angry mob, including women and children - cheering at the sight. I suggest you read the book "Black Hawk Down".

People like you would prefer my comrades and I in arms, simply ask the enemy really nicely "oh would you please not hurt us?". While they cut our throats and spit on, and burn the American flag for the anti western crowds that have not so friendly intentions for the U.S.

This technology is another tool, another option for our commanders in the field to accomplish their missions. The ultimate tactical applications, and ROE's regarding the technology would no doubt have to be worked out, but having it is better than not having it.

I had a modifed pro 43 worked on by RS repair service.... I never
mentioned the radio had been modified and they never asked. My
speaker failed. This occured a few years ago. The radio came back
fixed and the modificaiton I did was still in place.

Are they REALLY digital, or is somebody upstairs misusing the word "digital"
again? As I recall, the City used to advertise its new trunked system as
"digital" because it is controlled by a computer. The radio traffic is
still analog.

K S ï¿½ F (The Infamous Liar of the Internet!!) wrote:
>
> Richard - Your calculations are meaningless since you FAILED to
> post individualized data you used to reach the calculations for independent
> verification.

ROTFLMAO!

This is a prime example of when your caught dead to rights, you attempt
to deflect the focus in order to weasel out of the situation. The
definition of "individualized" is to treat or notice individually and
to adapt to the needs or special circumstances of an individual. My
data was tailored to YOU Toilet Boy, hence it doesn't fail as you so
weakly claim. Nice cross post moron.

The relevant part you snipped:

The data clearly shows that you, John 'Toilet Boy' Mackey are
a hypocrite. The data also shows that you've wasted a lot of
bandwidth on inane ramblings, something you've also accused
others of on many occasion. When you deny being a hypocrite,
you are a liar. As you're so fond of saying, it's "proof positive".

And the pertinent category definitions:

1 - On Topic: Technical content such as advice about equipment
modifications, how to build antennas, etc.
2 - On Topic: Nontechnical content such as posting frequencies, etc.
3 - Off Topic: Rants about Bill Cheek.
4 - Off Topic: Rants, lies, and other verbal stupidities.

And the data:

> > ---
> > Month/ | Total | Category |
> > Year | | 1 | 2 | 3 | 4 |
> > ---
> > SEP 2000 | 51 | 0 | 1 | 0 | 50 |
> > OCT 2000 | 70 | 0 | 0 | 3 | 67 |
> > NOV 2000 | 100 | 0 | 1 | 3 | 96 |
> > DEC 2000 | 44 | 0 | 0 | 13 | 31 |
> > JAN 2001 | 73 | 0 | 1 | 5 | 67 |
> > FEB 2001 | 111 | 0 | 1 | 22 | 88 |
> > ---
> > Totals | 449 | 0 | 4 | 46 | 399 |
> >
> > Average Messages Per Month: 74.8

> > Percentages: On Topic (total): 0.9%
> > Off Topic (total): 99.1%
> > Rants about Bill Cheek: 10.2%

And the all important conclusion:

So, the next time you accuse someone of not posting on topic, we can confidently say "Now Toilet Boy, don't be such a whining little wussy. You know you're a hypocrite and a liar when you make such accusations."

My Panasonic can be clearly heard on the 900mhz band. I emailed Pan. and got an answer saying something to the effect of: Spread Spectrum only makes it more difficult to tune the phone in, not impossible. This is a bullshit statement as far as I am concerned because they tout the secure aspect of this phone.

Unless they did the mod, they should not have a problem working on it.
It's illegal for them to mod the radio.
Try another radio shack for repair or even any electronics repair shop.

Hi!

I'm planning to purchase a base antenna for my WinRadio 1550e receiver. I've heard a lot a good comments about the Diamond D130J.

Any comments on his antenna (or any other) will be appreciated

Does anybody has the physical dimensions for this antenna?

Thanks!

191. FA Regency MX4000 Scanner Mint Condition L@@K $41.00 Item #1218481661

I am selling one Regency MX 4000 Scanner on E-Bay I am original owner and its in mint condition. I have the owners manual and AC wall adapter. The unit is a 20 channel AM/FM programable scanner with an LCD and 23 touch key pad for easy programing. You can purchase a optional battery pack (NOT INCLUDED) so you can walk around with it or use it anywhere! You can search in 5KHz or 12.5 KHz. This scanner is an old one but a good one. I accept Pay Pal for immediate shipping.Cost for shipping is 12.00 in the USA Only includes insurance and priority mail. Frequency range is: 30-50MHz (Low Band) 118-136MHz (Aircraft band) 144-148MHz (Amateur) 148-174MHz (High Band) 440-450Mhz (Amateur) 450-470MHz (Standard) 470-512MHz (Extended) 800-950MHz (800 ???)

192. Has anyone dealt with Bill Turner on Staten Island, NY?

Newsgroup: rec.radio.scanner
Date: 2001-03-05 01:43:54 UTC
From: foxblaine@aol.com

Source record: 69126

Please advise if you have. I responded to an ad he had on QTH.COM (Listing #93878) in which he had SEVERAL rigs up for sale or trade. I made an offer on an FT-847 which he accepted. He asked me to go ahead and ship it, and gave an address of:

Bill Turner
599 Midland Ave.
Staten Island, NY 10306

I became a bit weary due to his vague and infrequent answers to my e-mails, so did a bit of investigating. Did a reverse address search on him and spoke with someone at that address on Staten Island who has NO IDEA who Bill Turner is. Searched the QRZ database and could only come up with one call that matched, and that was in New York City. No luck tracking down a phone # there either. Thank GOD I haven't sent my rig out yet. I'd like to hear from ANYONE who has dealt with this guy.

His email is Bturner1957@aol.com -- What REALLY worries me is that I made a vague reference of my employment in the law enforcement field and that he could call me on my cell phone in the squad. AOL allows you to check the status of e-mails you send to other AOL users, and I see he read it, but no response at all from him.

Thanx in advance...and Bill, if you're legit, let me know so we can get on with the deal, and apologies in advance if it turns out you are legit.

73~~~

That's right, anytime we are victims of our own failed foreign policy,
we will just turn up the microwave for a few minutes and everything
will be all right. Just kind of look at it a Napalm that doesn't
destroy property. Neat stuff huh?

I would suggest that you look at the history of modern warfare before
you shoot your mouth off about the desires of the "professional
soldier). Try looking at how many civilians were killed at the
bombings in Germany. Try looking at the collateral damage from our
effective use of nuclear weapons in modern warfare. Were any
civilians killed in the bombing of Iraq? How about Bosnia? We never
killed civilians in Vietnam.

What happened to the soldiers in the Blackhawk was the result of
failed foreign policy and piss poor tactical planning. Cooking every
person within 700 yards would have made the outcome much different.

The option of cooking your enemies is another option available to the field commander. Plus, who says that is the only way that the technology can be deployed? Could a bigger one be put aboard a plane? Cook the people and keep the property.

Much better than a neutron bomb. Of course, the military never thought about that because they stay up all night worrying about hurting civilians....yeah right. Plus, do you really think that the only ones to use this technology will be the US military?

Are you that naive?

FACT# 1. Quite crossposting your trash Toilet-Boy. You keep adding newsgroups just too gain more attention and piss more people off.
FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR name and came running Toilet-Boy.
FACT# 3. I have presented my proof along with 3 other people that you were swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your defense is the repeater owner hears EVERY conversation on all 5 of his repeaters 24/7 and he didn't hear toilet-boy so it must not of happened. This is similar to toilet-boy putting his hands over his eyes and believing nobody can see him.
FACT# 4. You did exactly what I said in line one below. Word for word Toilet-Boy
FACT# 5.You answer to the name toilet-boy

There are five facts for you Toilet-Boy.

Now go plug your ears and maybe the voices will go away Toilet-Boy.

> anyone help?

I assume you know where these diodes are located so I'll spare you the details.

They are numbered from TOP to BOTTOM of the front-panel board as follows:

D503
Dxxx (not labeled)
D502
D504

The "decoder ring" for these diode can be found at http://www.mods.dk/

Looks to me like D503 and D502 should be installed... the rest uninstalled.

Hi,

I'm having a problem that I was hoping someone would be able to shed some insight on. I've got the Radio Shack Pro-94 Handheld scanner. The manual says, to go to a specific freqency, hit MAN freq MAN. So, I try hitting MAN 162.475 MAN (162.475 is my local National Weather service), and the unit returns back to me 'Error'.

Am I missing something?

Thanks,

Jeff

Well, thats nice rhetoric, Mr. Professional Soldier, but that nonsense is not fooling me. I'm fully aware of the military training scenarios featuring American citizens as the target (so-called terrorist groups - often conservative right-wing groups defined as "terrorist" groups). As any truthful professional soldier will tell you, this type of training has become commonplace within the military over the last few years.

And this mission (control of "terrorist" groups in the US) is certainly one of the primary factors driving the development of "crowd control" weapons in the military.

As for the "non-lethal" nonsense, let me remind you that just about everytime the military has been used for "law enforcement," the situation has become lethal.

Now you want to hand soldiers (and eventually police departments) a weapon touted as "non-lethal" if used correctly, when those very soldiers have shown that they cannot be trusted to use a gun correctly in those situations (remember, thats why the military does not give bullets to soldiers on guard duty).

Somehow, your claim that this is "non-lethal" technology does not really comfort me that much.

> If my men are under fire by civilians,
> and if I have a non lethal force option

> to employ, i will use it, but, given
> the absence of one, escalating to lethal
> force is the last alternative.
>
> Any professional soldier will tell you
> they do not wish to harm civilians, this
> is the impetus for this new technology.
> It is an effective deterrent, publicity
> not withstanding.

Ah, judging from the first paragraph directly above, I see you're also aware of the military training scenarios featuring so-called "terrorist" groups as the target (or at least aware of the mentality behind that training).

Anyway, the two paragraphs above don't add up when taken together. If "your men" are under fire, are you going to sit around waiting for this V-MADS weapon to be deployed? Of course not. You're going to shoot first and let God sort out the dead afterwards. So obviously, protection of civilians is not the real impetus for this new technology like you claimed in the second paragraph. Instead, this technology is obviously designed to control non-violent crowds (crowds that pose no lethal threat to your soldiers).

> And before you shoot your socialist
> mouth off, I suggest you remember
> the incident in the streets of
> Mogadishu, Somalia back in 1993.
> Where the body of a US Army Ranger
> was being dragged naked thru the

> women and children - cheering at
> the sight. I suggest you read the
> book "Black Hawk Down".

V-MADS technology would not have made any difference in Somalia, my friend. Thanks to the overly aggressive tactics used, our soldiers succeeded in turning the entire population of that country against us in just a matter of days (even groups that initially supported our involvement). V-MADS technology would not have changed that at all.

Even that specific incident (the crowd dragging the soldier) would not have changed with V-MADS technology. Since that incident was totally unexpected, V-MADS technology would not have been immediately available to use. By the time it would have reached the location, the incident would have been over.

> People like you would prefer my
> comrades and I in arms, simply ask
> the enemy really nicely "oh would
> you please not hurt us?". While
> they cut our throats and spit on,

> and burn the American flag for
> the anti western crowds that have
> not so friendly intentions for
> the U.S.

Don't give me that "comrades in arms" fighting the enemy nonsense, because it just doesn't fly. This technology, as advertised, is not about fighting the enemy . This weapon is being advertised as a crowd control tool. And, as far as I know, the military has not yet defined non-violent crowds as the enemy (yes, since you've already said you would use conventional weapons against violent crowds that threatened your soldiers, we are talking about non-violent crowds).

And, if you're fighting an enemy, you're not going to use weapons like this in a non-lethal manner. If this type of weapon is used at all, it will be used to kill the enemy. As such, it becomes nothing more than another weapon to kill with (so drop the high moral facade, my friend).

And, finally, I strongly object to your attempts to paint me as anti-American or anti-military. Throughout this entire discussion, my comments have been solely directed at the use of this technology as a crowd control tool. Not once have I commented on the use of this technology against a real enemy in a warfare situation.

Furthermore, I don't see how one can be painted as anti-American because of opposition to a weapon anyway. The United States has huge chemical weapons stockpiles. Is it anti-American to be opposed to chemical weapons? What about biological weapons (we have a stockpile of those also)? What other weapon must I not object to if I want to avoid being called anti-American?

Agreed. In fact, they let the cat out of the bag with the press release (its based on RF). Since we're talking about radio here, it should not be that difficult to figure out - almost anybody familiar with radio could come up with the frequency used with little experimenting and the equipment should certainly not be that difficult to build. Somehow, I suspect we're seeing the beginnings of a whole new arms race.

The interesting thing is that pretty much anyone can build this thing --
and, if the government is claiming that it's NOT a dangerous weapon,
then if the intended victims "do unto others before they are done unto,"
there isn't a lot of room for the Feds to complain, is there?

Wouldn't you love to be in THAT courtroom?

ATTY: "Officer, you testified that the defendant was using a Scrooch
Gun on you. Yet we have heard testimony that the defendant had an
Amateur Radio license, and was transmitting at legal power and frequency
. . ."

They would simply ban the frequencies use for the general public and make it
a federal penalty to even possess it.

Though no 1 antenna is great on all frequencies there are some that you can adjust as needed.

I have a few from Radio Shack, a mobile mag mount ham/scanner antenna which I keep near the window; no problems as far as I see, second is a expandable whip type which can be raised/lowered as needed: tuning instructions are included in the package, though I have always pretty much kept it fully extended and attached to a Pro-2014. (Most monitoring is Public Safety and such at 140 to 860 MHz and air frequencies 120-130 MHz) results are good.

For other antennas try http://sss.strongsignals.net where I just saw a few reviews for antennas.

Hope this helps,

BTW: there are a few other antenna links at the PBScanner site, follow link in signature.

"Like new" and "mint" are different things. Mint means absolutely no marks or scratches, barely used, with all original paperwork in the original containers. When a radio has been taken out of the box and put into regular use, it is no longer "mint."

Message-ID: <a7i7at4pig56cqjbu96gcf8e42ja767ilg@4ax.com>
Source record: 69069

Folks, take it easy. This is really nothing new. I'm surprised nobody has built one of these things to this day.

Those of you who have used heat lamps and microwave ovens will realize that these researchers are talking about millimeter wave-lengths and less. I suspect the frequency they'll try to use will be something in vicinity of 60 GHz (one of the frequencies water absorbs well). For comparison, most microwave ovens run at something like 2.4 GHz.

The lower the frequency the deeper the heat will penetrate. Some of the old diathermy machines used to run at 27 MHz. That's right, MHz.

So what can you expect from a weapon like this? It will hurt. It can also be defeated in much the same way as a high intensity light beam, by hiding behind something.

The first danger to consider besides a mild burn is the formation of cataracts in the eyes. Yes, this weapon could blind you just as arc-welding without eye protection will blind you.

But before you well reasoned folks start screaming about how unethical this weapon is, has anyone reviewed what over exposure to CS gas ("tear gas") can do to the body? Now this weapon doesn't look so bad, does it?

At least you can hide from a weapon like this.

And for those of you who worry that this will be some sort of HERF bomb, remember: it needs LOTS OF POWER. And it will need a good sized antenna too. Despite what the fear-mongers spew, this is not a coke-can size of technology --plain old physics will tell you that.

Putting this in perspective, I'm rather encouraged to see that the Department of Defense has been doing their homework on the field of non-lethal force. It's overdue.

And if anyone is the least bit concerned about a rouge dictator acquiring or using such weapons, just remember, there is a whole lot of stuff out there already. Lethal weapons are still cheaper and easier to deploy, and this technology does nothing to change that equation.

Hi
Obviously Tom Sevart is not going to make good on this JUNK Icom R71A
he sold me for 400.00 stating it was an excellent radio, which is a
parts radio. It comes with Remote Control and has FM in it, if that
means anything.
I'm forced to sell it as a parts radio, because it doesn't work.
So, being an honest person, thats how I have to sell it.
As is, parts only.
Please make an offer. Again be aware of Tom Sevart N2UHC
Here was a copy of his ad.
I have an R71A for sale in excellent condition. Coverage is 100 KHZ -
30
MHZ AM/FM/USB/LSB/CW/RTTY. 32 memory channels. Optional FM board
installed
& remote control included. Owner is a non-smoker. I am asking $400
firm.
The receiver can be seen at http://photos.yahoo.com by clicking on
"Radio
Pics." I want to sell this receiver so I can buy an R75. If
interested,
contact me at n2uhc@yahoo.com.

K S ï¿½ F (The Infamous Internet Liar!!) whined:

> WRONG! YOU have AVOIDED to discuss your topics
> in a matter based on TRUTH. When asked to present
> your data for individualized verification, you refuse. YOU
> are the CLEAR LIAR!

ROTFLMAO!

The topic is your hypocrisy regarding off topic posting. My analysis was designed to show just how often YOU post off topic, it it succeeded to the point that you are frothing at the mouth.

It's your contention that I've lied about the date I've presented. Since you've pretended to be an advocate for the truth in the past, let's test your assertion on whether I lied about the data or not.

It is my assertion that:

My data accurately shows the quantity of messages you posted over the specified time period. The categorical break down as to topic is as accurate as it was generous. As far as "individualized verification" of the data, it was specific to YOU Toilet Boy, no one else. Hence, it was *highly* individualized. Do you need help understanding that you are the individual described in the data? Do you need help verifying who you are?

If you need to see the messages, I can repost all 449 messages, however, it would be more bandwidth efficient to post the 4 measly on topic messages.

Just in case you need the data for reference when you compose another lie, here it is. Oh, by the way, nice cross post moron.

So Toilet Boy, just what is it you are having such a problem with? Is it the accuracy of the message counts (they're correct), or is it what the data shows (the numbers don't lie, you're a hypocrite), or is it that you have a problem with the messenger (too bloody bad)?

I've analyzed your postings over the last six months and the numbers speak for themselves. All of the posting came from the period September 2000 through February 2001 and were sorted into four categories. They are:

1 - On Topic: Technical content such as advice about equipment modifications, how to build antennas, etc.
2 - On Topic: Nontechnical content such as posting frequencies, etc.
3 - Off Topic: Rants about Bill Cheek.

4 - Off Topic: Rants, lies, and other verbal stupidities.

And the numbers:

Month/ Year	Total	Category 1	2	3	4
SEP 2000	51	0	1	0	50
OCT 2000	70	0	0	3	67
NOV 2000	100	0	1	3	96
DEC 2000	44	0	0	13	31
JAN 2001	73	0	1	5	67
FEB 2001	111	0	1	22	88
Totals	449	0	4	46	399

Average Messages Per Month: 74.8
Percentages: On Topic (total): 0.9%
Off Topic (total): 99.1%
Rants about Bill Cheek: 10.2%

The data clearly shows that you, John 'Toilet Boy' Mackey are a hypocrite. The data also shows that you've wasted a lot of bandwidth on inane ramblings, something you've also accused others of on many occasion. When you deny being a hypocrite, you are a liar. As you're so fond of saying, it's "proof positive".

So, the next time you accuse someone of not posting on topic, we can confidently say "Now Toilet Boy, don't be such a whining little wussy. You know you're a hypocrite and a liar when you make such accusations."

>Am I missing something?

I tried it, (p32) and no, it doesn't work with mine either. time to write to
RS? :)
On the other hand, why bother? The 94 has the weather freqs pre-programmed into
the 'svc' key. (p24) Svc button is also covered on p29.

I try to keep my manual handy, as I would be lost without it.

252. FS: Drake SW8 and Pro-46 scanner. Both excellent condition

Newsgroup: rec.radio.scanner
Date: 2001-03-06 01:31:22 UTC
From: Mike Taylor <mtaylor27@yahoo.com>
Message-ID: <3ef8atkkg0sdlva03dfsvqfs1fq39vjmk7@4ax.com>
Source record: 69090

For Sale:

Drake SW8. Near mint condition. Very little use, all indoors. A
great radio. Going hamfest/Ebay price is around $460.00.

Radio Shack (Uniden) Pro-46 scanner. This is an early model (8A3)
Pro-46, which is keypad-modifiable to unlock undocumented frequency
ranges. Going price on this is hard to find, as they are a bit rare.
I'm asking $130.00.

I'd rather sell them both at once, and will do so for a nice discount
if they go together. Buyer pays for shipping of their choice from ZIP
46637. Make me an offer!

SNIP

To make it even more simpler, (especially since NO ONE from the
"parg.org" domain has initiated ANY of the problems currently on this
NG) simply filter out the following:

Anyone from "@cts.com" since that ISP is the well known refuge for spammers.
Also filter out "who@knows.com".

"Like new" and "mint" are different things. Mint means absolutely no marks or scratches, barely used, with all original paperwork in the original containers. When a radio has been taken out of the box and put into regular use, it is no longer "mint."

-Dave, NF2G

Good point, but without SEEING the radio, how can YOU tell it is NOT "mint"??Just curious.....

Actually, I can't tell ANYTHING about the condition of the radio. The original poster described it as both "like new" and "mint" in the same sentence. Buyer beware! If he doesn't know what those terms mean, then maybe the radio is in some other condition.

> Then quit posting YOUR trash!

Uh Toilet-Boy you asked for me to present the facts and I quote

"If you were speaking the truth you would NOT be fraid to present your facts."

I am speaking the truth so I present the facts and you are back to crossposting a response. Tisk tisk Toilet-Boy.

Where's Fact# 2 Toilet-Boy? You snipped it. Let's see that fact again:

"FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR name and came running Toilet-Boy."

Fact#2 is a golden Fact . The Famous Fact# 2. The fact Toilet-boy wouldn't quoate cause it's the truth - Just call Toilet-Boy and John-Mackey comes a running.

> > FACT# 3. I have presented my proof along with 3 other people that you were
> > swearing and throwing a tantrum on the 523 repeater
>
> You presented NO proof & the repeater owner denies that there was
> ever any such problem. He says he doesn't even know who YOU
> are!!!!!!!!!

Now Toilet-Boy tells the typical John Mackey lie. Let's look at Fact# 3 as it was really written.

" FACT# 3. I have presented my proof along with 3 other people that you were swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your defense is the repeater owner hears EVERY conversation on all 5 of his repeaters 24/7 and he didn't hear toilet-boy so it must not of happened. This is similar to toilet-boy putting his hands over his eyes and believing nobody can see him."

Seems you left a bit out in your snipping Toilet-Boy. I wonder why I have had exclusive use of his 440 repeater for the last couple of years. Makes no difference you can't dispute Fact#3 at all. You had to snip and tell your lies Toilet-Boy. Defeat again.

But wait! That's not all! We had FACT# 4 and FACT# 5 Toilet-Boy. Now what did you do with them??? Guess I'll refresh your mind, help the Toilet-Lad out.

FACT# 4. You did exactly what I said in line one below. Word for word Toilet-Boy

FACT# 5.You answer to the name toilet-boy

WOW! I hit those two RIGHT ON THE NOSE Toilet-Boy. FACTS not some made up and snipped lies like Toilet-Boy does.

So to recap it for you Toilet-Boy:
FACT# 1. Quite crossposting your trash Toilet-Boy. You keep adding newsgroups just to gain more attention and piss more people off.
FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR name and came running Toilet-Boy.
FACT# 3. I have presented my proof along with 3 other people that you were swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your defense is the repeater owner hears EVERY conversation on all 5 of his repeaters 24/7 and he didn't hear toilet-boy so it must not of happened. This is similar to toilet-boy putting his hands over his eyes and believing nobody can see him.
FACT# 4. You did exactly what I said in line one below. Word for word Toilet-Boy
FACT# 5.You answer to the name toilet-boy

There are five facts for you Toilet-Boy.

its funny because many media outlets took some very good shots of this unit on video. one could simply measure the waveguide and resonance chamber and easily figure out the frequency. of course, the right amount of power is another issue, but 20 rats and an assortment of different gain dishes would fix that problem. the $50 million? inflated salaries for the last ten years..any good geek could do it under $10k easy.

Panasonic phones using secure technology is not secure at all,

Using program baud line (linux) using AMD 1 GHZ machine, using (Shift) and Scale. It can be decoded.

Am sure panasonic will hate me for this.. :)

I downloaded the manual from www.BC780XLT.com I just checked and, now I
get an
error that the remote site cannot be found. I downloaded the file, it is
4.59 MB in Adobe PDF. I still have the file on ZIP disk.I could sent it to
you.

I have an AOR AR3000A in mint condition. I have the manual, AC and Dc
power supplies, no box.

I am looking to swap for one of the following:

Icom 706 MkII or IIg
Yaesu FT100
Yaesu VR5000
Drake R8B

other possibles include:

Kenwood TS450SAT
Kenwood 742 w/10 FM
Collins 51S1 or 75S3B or C

Willing to entertain offers and will negotiate on trades for the above.
This radio has full coverage from 100KHZ to 2036 MHZ, 400 memories,
RS-232 port.

293. Speech Inversion Descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-03-06 14:11:17 UTC
From: ctpds49@aol.com
Message-ID: <20010306091117.22135.00000021@ng-ch1.aol.com>
Source record: 69032

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

I can't remember exactly which models, but some of the RS handhelds
that I have had (the newer ones anyway) returned an error message
like that when I entered a frequency that was already entered
somehwere else. Once I figured that out, it wasn't too disturbing
when I saw the error message again. One model (again, I don't
remember which) made me verify that I wanted to enter the same
frequency into a second channel location, but it would let me do it.

Hope that helps a little.

Roger

What I said thee who answers to the name Toilet-Boy was and I quote:

"I am speaking the truth so I present the facts and you are back to
crossposting a response. Tisk tisk Toilet-Boy."

...and your message I was referring to was one you crossposted. So again you
are proven a LIAR Toilet-Boy. It's just so easy with a WUSSY LIAR like you
Toilet-Boy. Now go snip something else and play some more make believe
Toilet-Boy. The ONLY thing you are capable of doing Toilet-Boy.

THE UNDISPUTED FACTS
FACT# 1. Quite crossposting your trash Toilet-Boy. You keep adding
newsgroups just to gain more attention and piss more people off.
FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR
name and came running Toilet-Boy.
FACT# 3. I have presented my proof along with 3 other people that you were
swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your
defense is the repeater owner hears EVERY conversation on all 5 of his
repeaters 24/7 and he didn't hear toilet-boy so it must not of happened.
This is similar to toilet-boy putting his hands over his eyes and believing
nobody can see him.
FACT# 4. You did exactly what I said in line one below. Word for word
Toilet-Boy
FACT# 5.You answer to the name toilet-boy

There are five facts for you Toilet-Boy.

Source record: 68956

K S ï¿½ F (The Infamous Internet Liar!!) wrote:

> WRONG!

I claimed you were a hypocrite for accusing others of off topic posting and provided my proof. You claimed in rebuttal that I had lied and falsified my data. When you were challenged to show where my data was faulty, you were unable to do so.

Again, what part of my data is faulty? Is it:

a) The quantity of messages I used for my analysis. Did I miss any messages?
b) The statistics of my analysis. Did you have more or less than four valid on topic posts?
c) The conclusion of my analysis. Are you afraid to face the truth about yourself (that you're a liar)?
d) The messenger. If you don't like the messenger, too bloody bad. There is nothing you can do about it.

This is the same kind of tactic you tried with Bill Cheek. You'd make some baseless claim and never back up those claims when pressed to do so. Your behavior is similar to yelling fire in a theater. But, you underestimated Cheek because he stood up for himself. It's okay for you to harass people and make lame accusations against them but when the tables are turned and you're on the other end, you whine and cry foul. That's how you prove you are a hypocrite every time you post.

To assist you in answering the questions posed above, here is my analysis on your off topic posting for reference.

I've analyzed your postings over the last six months and the numbers speak for themselves. All of the posting came from the period September 2000 through February 2001 and were sorted into four categories. They are:

1 - On Topic: Technical content such as advice about equipment modifications, how to build antennas, etc.
2 - On Topic: Nontechnical content such as posting frequencies, etc.
3 - Off Topic: Rants about Bill Cheek.
4 - Off Topic: Rants, lies, and other verbal stupidities.

And the numbers:

Month/ Year	Total	Category 1	2	3	4

```
-------------------------------------------------------------
SEP 2000 | 51 | 0 | 1 | 0 | 50 |
OCT 2000 | 70 | 0 | 0 | 3 | 67 |
NOV 2000 | 100 | 0 | 1 | 3 | 96 |
DEC 2000 | 44 | 0 | 0 | 13 | 31 |
JAN 2001 | 73 | 0 | 1 | 5 | 67 |
FEB 2001 | 111 | 0 | 1 | 22 | 88 |
-------------------------------------------------------------
Totals | 449 | 0 | 4 | 46 | 399 |

Average Messages Per Month: 74.8
Percentages: On Topic (total): 0.9%
Off Topic (total): 99.1%
Rants about Bill Cheek: 10.2%

The data clearly shows that you, John 'Toilet Boy' Mackey are a
hypocrite. The data also shows that you've wasted a lot of
bandwidth on inane ramblings, something you've also accused others
of on many occasion. When you deny being a hypocrite, you are a
liar. As you're so fond of saying, it's "proof positive".

So, the next time you accuse someone of not posting on topic, we
can confidently say "Now Toilet Boy, don't be such a whining little
wussy. You know you're a hypocrite and a liar when you make such
accusations."

> The "HYPROCRISY" is where YOU ignore the overwhelming
> amount of YOUR OWN off-topic postings.

How do you define "overwhelming"? Fifty, one hundred, two hundred, or
what? If you want an answer, provide the definition.
```

you takes your chances... I do not usually esd but the scanners I work on are older and probably don't have cmos type i.c.'s. Even when I work on monitors I don't esd. If I find that there is a lot of static, which doesn't happen often as I am working in a damp basement, I will touch a ground point to make sure I am not charged up.

You must be listening to a local repeater. I believe NASA uses freqs in
the GHz range (or at least much higher than a normal scanner can pick
up) for direct communication back to Earth.

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

328. ICOM R10 Delay problem.

Newsgroup: rec.radio.scanner
Date: 2001-03-07 02:50:57 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <9847mh$n7p$1@coranto.ucs.mun.ca>
Source record: 68969

If I change the delay to 5 sec instead of pause and I press
scan in VFO mode the receiver keeps scanning after 5 sec
even if the signal is still there. This is how it should work
BUT if I press program scan or auto memory write and then
scan to start scanning it stays on the signal until it
stops transmitting. I know there is nothing wrong
with the radio but what have I set wrong or what am I
doing wrong?

I want to program in 144.000 to 148.000 kHz and have
the radio auto program all channels it finds but it
stops on signals and will not keep going unless the
station stops. I also want to program afew other ranges.
I tried using VSC and it does work but not always.

Thanks for any help.

That's incorrect, the space station uses 143.625MHz and other freq's in the 130MHz range at the present time. However recent additions to the station have provided the ability to use satellites for communications, so you'll hear less and less on VHF as time goes on.

What I said thee who answers to the name Toilet-Boy was and I quote:

"I am speaking the truth so I present the facts and you are back to
crossposting a response. Tisk tisk Toilet-Boy."

...and your message I was referring to was one you crossposted. So again you
are proven a LIAR Toilet-Boy. It's just so easy with a WUSSY LIAR like you
Toilet-Boy. Now go snip something else and play some more make believe
Toilet-Boy. The ONLY thing you are capable of doing Toilet-Boy.

THE UNDISPUTED FACTS
FACT# 1. Quite crossposting your trash Toilet-Boy. You keep adding
newsgroups just to gain more attention and piss more people off.
FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR
name and came running Toilet-Boy.
FACT# 3. I have presented my proof along with 3 other people that you were
swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your
defense is the repeater owner hears EVERY conversation on all 5 of his
repeaters 24/7 and he didn't hear toilet-boy so it must not of happened.
This is similar to toilet-boy putting his hands over his eyes and believing
nobody can see him.
FACT# 4. You did exactly what I said in line one below. Word for word
Toilet-Boy
FACT# 5.You answer to the name toilet-boy

There are five facts for you Toilet-Boy.

I bought it. It works great. $75 bucks is well worth it for me not 'dialing'
in alpha tags letter-by-letter for hours.

(Oh and no, I'm not handing out any pirated copies, so don't ask.)

Uniden Bearcat 9000 XLT for sale,

All in perfect "as new" condition as its only a month or so old,

I'm just wanting to change to a handheld model, and I cannot afford to keep two scanners unfortunately..

Any info about the scanner can be given apon request.

Its frequency range is 25mhz to 1,300 mhz, its got 500 memories, ALPHA tagging of channels, and about 50 other wicked features.

Selling Price

$350 Australian Dollars,

Postage is the buyer's concern, and I only really want to accept Money Order's.

Please reply to datathief@dingoblue.net.au

Thankyou :)

what kind of setup would i need to hear space stations's etc?

Currently I have a bearcat 9000 (which i hope to sell for a handheld
scanner) which goes to 1,300mhz, and i have a diamond discone antenna
mounted on my roof

I am located in Melb, Australia

Anything with an external antenna

> I am located in Melb, Australia

That would be a problem then, as the 130-145MHz freq's are only used to
communicate with receive sites in Russia & the US.

The International Space Station frequencies are:

145.800 - packet downlink (and voice ops on occassion)

145.990 - packet uplink

145.200 - ITU Region 1 voice

144.490 - ITU Region 2 & 3 voice (USA is here)

I still hear Russion on the 143.625 frequency - I believe they kept
that as their control frequency (as it was on MIR) - Good luck to all
listeners (and talkers!)

I worked yesterday, and we drilled on these new radios. I saw a dept. videotape on it. According to Motorola, they transmit in digital. My understanding is the radios's have digital-analog converters in them. So, the over the air transmission's would be digital, and the radio will convert it to analog. I spoke with disp. 359 about these radios, and his feelings were the same as Frank's. The job is secretive about frequencies and capabilities. Frank, if you find out the frequencies on the chanels, can you e-mail them to me? Also, channel's 4-8, are those going to be the mobile frequencies? We had some confusion in the firehouse about these channels.The guys are concerned with their "mixer off" frequencies.

363. NYPD channel plans and questions

Newsgroup: rec.radio.scanner
Date: 2001-03-08 00:08:05 UTC
From: Peter Dougherty <ve3thx@canada.com>
Message-ID: <uohdat0pqqoqig1i8gbidg8ssvr2rrlgig@4ax.com>
Source record: 68902

Hi folks,

I have a question or four for the die-hard NYPD monitors out there. Since moving into NY last fall I've been listening on and off to the local precincts near me and the main SOD frequencies with great interest, but I'd really like to get a better understanding of how the department's radios are programmed. I purchased the 6th edition of NY/NJ Scanner Master, which gave me some very insightful info, but alas, it's mostly out-of-date now.

For example, I live in the 104. I hear a request for "so-and-so go to 9". Obviously it's a tactical channel, likely simplex, and likely in either the 470 or 476 range. While it might have an "official" name, whatever it is is simply programmed into mode 9 in the cops' portable or mobile radio and that's how they refer to it. It's that channel plan that I'm looking for (not just for my area but for the city).

(2) What is meant by the term "Patrol Borough" and the abbreviations PBQN, PBQS, PBBS, etc, that I see on many frequency lists?

(3) Who uses the Citywide frequencies, and what are the different Citywide frequencies used for? (CW vs, CW2, etc).

(4) Finally, from time to time I hear a word that sounds like "resurrect." What am I hearing and what does it mean?

If there are any dedicated NYPD and FDNY monitors who might be willing to help this relative New York newbie by e-mail or other more direct means, please feel free to drop me a note (pjd at panix dot com)

I have a Optoelectronics R-10 Interceptor. This picks up nearby radio transmissions from 300 mhz to 2 Ghz. This is continous coverage no frequency ranges are cut out! Works fine and comes with an AC adaptor. The nicad battery pack has gone dead but you can get a replacement from Optoelectronics. Selling without antenna (I like it, I'm going to keep it). Price is $120 plus shipping, check ebay for my references. Thanks!

Maybe.....
Do you have any local HAM clubs? Perhaps query a store
which sell scanners. Is there a goverment facility (for Holland)
which monitors the frequency spectrum?

Good luck!

>"resurrect." What am I hearing and what does it mean?
>

I can't help you with most of the NYPD stuff but in this case the word you're hearing is "read-direct". It means "I heard the message, no need for Central to relay. e.g., "4 Adam central, tell 4 Boy I have his paperwork." 4 Boy would then key up, before Central has a chance to and reply, "Read direct."

>If there are any dedicated NYPD and FDNY monitors who might be willing
>to help this relative New York newbie by e-mail or other more direct
>means, please feel free to drop me a note

I'm always available for questions and explanations in my particular field.

CH9 in all the portables in the car to car or tac ch.

in the 104pct (zone 31) it is A TAC
485.6125 with a pl of 203.5
you can see a complete list of all the tacs
at www.n2nov.net

what sounds like reserect is read direct
thats a unit saying that he heard a meesage directed to him and doesn't need
the dispatcher to repeat it

Patrol Borough units are sort of like what the task force unit were years
ago,they are uniformed officers who are available to respond as needed for
special events,riots etc etc

the CW freqs are used by all types of units , boro det's,boses,etc etc

373. Re: ICOM R10 Delay problem.

Newsgroup: rec.radio.scanner

I know what my problem was. The setup has a delay BUT the
program scan groups also have a delay setting. When you
scan a program bank it uses it's own delay setting. I just
had to change that one and it was fine.

Carl Hodder (sba3020@InfoNET.st-johns.nf.ca) wrote:
: If I change the delay to 5 sec instead of pause and I press

Yes, try www.rdr.nl ; this is the department of anything concerning the
radio-frequency spectrum in the netherlands.

Bye,

Murat

391. Denver area Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-03-08 14:28:35 UTC
From: MarkW <markw1@prodigy.net>
Message-ID: <co5fat0d122gej0eihgmbrkrjk5moqpl6p@4ax.com>
Source record: 68929

Hello, I'm relatively new with scanning and have a Bearcat handheld scanner I'm ready to set up. I live in the Denver/Boulder area and bought a policecall which has all the frequencies but it appears they list all licensed frequencies and some of these are no longer used (such as some frequencies used before going to trunked systems) and as well often it's hard to know what many frequencies are used for. I've found a few lists on the web of freqs. but many are a couple years old or more so I know they could have changed. Does anyone know where I can get a relatively recent list of frequencies for this area?
Thanks.

"K S F (The Famous Toilet-Boy!!) wrote...

> You NEVER gave ANY facts, only your un-supported & baseless accusatons!
> Give some verifiable FACTS!

Above we see the one who runs to the name Toilet-Boy repeat hi un-supported & baseless accusations. He asks for verifiable Facts so lets go REAL SLOW for Toilet-Boy. Dispute them with some proof rather that just your say so Toilet-Boy.

THE UNDISPUTED FACTS THAT TOILET-BOY CANNOT REFUTE!!!

FACT# 1. Quite crossposting your trash Toilet-Boy. You keep adding newsgroups just to gain more attention and piss more people off.

Toilet-Boy actually didn't cross post this last time. Wow Toilet-Boy you did what you were told!

FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR name and came running Toilet-Boy.

Yes, every message I have written has been directed to Toilet-Boy. You know your name Toilet-Boy!

FACT# 3. I have presented my proof along with 3 other people that you were swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your defense is the repeater owner hears EVERY conversation on all 5 of his repeaters 24/7 and he didn't hear toilet-boy so it must not of happened. This is similar to toilet-boy putting his hands over his eyes and believing nobody can see him.

Do your Toilet-Boy dance now! Tell us all how a repeater owner knows EVERY USER on EVERY REPEATER 24/7 Toilet-Boy. Your behavior on here mimics what you did on the repeater Toilet-Boy. FACT!!!!!!

FACT# 4. You did exactly what I said in line one below. Word for word Toilet-Boy

Proven by you again and again.

FACT# 5.You answer to the name toilet-boy

FACT FACT FACT. Look at any message I have posted and you responded to this week. All are to Toilet-Boy and you answered them like the good little Bed-Pan-Changer you are!

There are five facts for you Toilet-Boy.

Your turn Toilet-Boy.

Go to the light Toilet-Boy!!!!!!!

What is a good way to get alternator humm of of my radios. I thought it was a ground loop problem, but ruled that out. Most radios have filters in them to filter this out. but I have some other radios that don't. what can I use to filter this alternator humm interference out ? I tried a capacitor but maybe it was the wrong size. I tried a few things with no luck. I expect that I should know how to fix the problem since I am a ham. but. This new alternator that I replaced sicne the old one broke is worse then the old one. I don't have a problem with igntion humm though. thanks in advance for the advice

Radio Shack sells a pretty effective filter specifically for alternator whine. It is wired between your power source and the radio and can handle up to 10 amps current. I have one on my radio and it took out all of the whine on both transmit and receive.

> SNIP

You replied to my message Toilet Boy, yet you use headers from Glen Hansen
with a misquote. it's easy to tell when you're off your medication again.

Just in case you were trying to avoid my post, here it is for your reading pleasure. If it is my post you were refering to, the evidence is contained herein, where it always has been. Are you so stupid (most likely) that you can't read it or what?

I claimed you were a hypocrite for accusing others of off topic posting and provided my proof. You claimed in rebuttal that I had lied and falsified my data. When you were challenged to show where my data was faulty, you were unable to do so.

Again, what part of my data is faulty? Is it:

a) The quantity of messages I used for my analysis. Did I miss any messages?
b) The statistics of my analysis. Did you have more or less than four valid on topic posts?
c) The conclusion of my analysis. Are you afraid to face the truth about yourself (that you're a liar)?
d) The messenger. If you don't like the messenger, too bloody bad. There is nothing you can do about it.

This is the same kind of tactic you tried with Bill Cheek. You'd make some baseless claim and never back up those claims when pressed to do so. Your behavior is similar to yelling fire in a theater. But, you underestimated Cheek because he stood up for himself. It's okay for you to harass people and make lame accusations against them but when the tables are turned and you're on the other end, you whine and cry foul. That's how you prove you are a hypocrite every time you post.

To assist you in answering the questions posed above, here is my analysis on your off topic posting for reference.

I've analyzed your postings over the last six months and the numbers speak for themselves. All of the posting came from the period September 2000 through February 2001 and were sorted into four categories. They are:

1 - On Topic: Technical content such as advice about equipment modifications, how to build antennas, etc.
2 - On Topic: Nontechnical content such as posting frequencies, etc.
3 - Off Topic: Rants about Bill Cheek.
4 - Off Topic: Rants, lies, and other verbal stupidities.

And the numbers:

Month/ Year	Total	Category 1	2	3	4
SEP 2000	51	0	1	0	50
OCT 2000	70	0	0	3	67
NOV 2000	100	0	1	3	96
DEC 2000	44	0	0	13	31
JAN 2001	73	0	1	5	67
FEB 2001	111	0	1	22	88
Totals	449	0	4	46	399

Average Messages Per Month: 74.8
Percentages: On Topic (total): 0.9%
Off Topic (total): 99.1%
Rants about Bill Cheek: 10.2%

The data clearly shows that you, John 'Toilet Boy' Mackey are a hypocrite. The data also shows that you've wasted a lot of bandwidth on inane ramblings, something you've also accused others of on many occasion. When you deny being a hypocrite, you are a liar. As you're so fond of saying, it's "proof positive".

So, the next time you accuse someone of not posting on topic, we can confidently say "Now Toilet Boy, don't be such a whining little wussy. You know you're a hypocrite and a liar when you make such accusations."

> The "HYPROCRISY" is where YOU ignore the overwhelming
> amount of YOUR OWN off-topic postings.

How do you define "overwhelming"? Fifty, one hundred, two hundred, or what? If you want an answer, provide the definition.

What Brand of Scanner, what do you want to Unblock?

Depending on the Model, Date of Manufacture and ability; some scanners are able to be modified to restore some frequencies, but you will need to provide more information for help.

Brand, Model, Date Code and what you want to try and do.

You can also use any number of search engines: "Brand x Mods"

Palm Beach Scanners- Florida, USA.

Alinco has a nice unit out that is the smallest ever scanner; priced at around
$300.

Icom has another small unit but I understand it was not well received by users.

Radio Shack did have crystal controled units that did 2 channels but have not
seen one of those in some time.

424. Column Editors Wanted - Scanner Digest Newsletter

Newsgroup: rec.radio.scanner
Date: 2001-03-09 02:03:38 UTC
From: Lou <Security@Headquarters.gov>
Message-ID: <udegat0cvcj21g0ga9edvsbipv6i52lmdr@4ax.com>
Source record: 68863

We're relatively a new scanner publication (print version) that covers areas from Maine to Virginia and beyond. We produce a bi-monthly newsletter covering scanner topics to many regions. We've looking for interested individuals who would like to be part of an all-volunteer staff to submit regional columns on scanner topics. We're also looking for scanner enthusiasts who would like to write a column on any scanner topic of general interest.

All those who submit material that is used within the Scanner Digest Newsletter receive the publication for FREE! Whether your associated with a public safety agency, have knowledge of radio communication systems, or are really into scanning "buff" we would like to here from you. Dedicated to bringing our readers detailed regional scanner information with explanations on how various systems work.

Looking for scanner enthusiasts interested in regional column editor position for the following areas:

Amateur Radio
Marine - Coast Guard
Civilian Aviation
Commercial Aviation
Entire state of Maine
Entire state of Rhode Island
Western New York State
Central Pennsylvania
Western Connecticut
Philadelphia Metro
Western Ohio
Any area of Florida

Be sure "Column Editor Wanted" is placed in your subject line and e-mail all inquires to:

ScannerDigest@*usa*.net

Please remove * * around usa

or U.S.P.S. inquires to:

Lou Campagna - Publisher
Scanner Digest Newsletter
POB 207
Jamison PA 18929-0207

For a limited time, we will make available two (2) sample newsletters for the price of one. Typically we get $2.00 for a sample copy of the

Scanner Digest Newsletter mailed out via bulk rate but will ship out 2 sample issues via first-class mail to your postal address.

Subscriptions are $22.00 per year which will get you 6 issues (bi-monthly). Send check or money order made out to: "Scanner Digest" and mail to address listed above.

Thanks for your time and consideration.

Lou Campagna - Publisher.

AOR AR 8200 Series 2 for sale. Brand new in box, never used. This is the Euro version which means it is totally uncut. Includes optional case, and 4 MAHA 1550 mAH nickel metal hydirde batteries. This radio was an impulse purchase just after Xmas, (thought I deserved a gift!) but never used. It is an EXCELLENT Receiver, but WAY too much radio for my purposes.

$500.00 shipped, USA only, NO COD, NO TRADES.

I will ask for a US Postal money order ONLY on this one.

E-mail if interested.

I recently bought the DJ-X10E, it's a very capable receiver, I find the dual VFO facility very useful. The menu driven facilities make it easy to use, but can slow down operations at times. It's sensitive and the audio quality is very good.

I also have an IC-R10, which I have ised for several years. I find it very difficult to choose between them, but if pushed, would probably choose the Alinco.

Cross-posted to: rec.travel.air,rec.radio.scanner,alt.radio.scanner

I do not understand WHY airlines are not allowing or making a big deal about
personal electronics on board their logic makes no sense.. well it kinda does

put a laptop next to a spectrum analyzer and you will see processer radio frequency noise
not just on discrete frequencies but over a wide band. I've put my sensitive scanner radios
next to a PC and can get noise over a wide range of frequencies, the noise changes
depending on what the CPU is doing.

I have done the same whith the scanner and with a sony Watchman portable TV, and with a
handheld radiotelephone, also known as a cellular phone.

I can understand the phones...first the cell network is designed to work with low power
devices and the mobile units should only be seen by one or two cell sites, when airborne,
the mobile probably can be seen by many different cell toweers also, the airlines have
installed GTE Airfones and profit from every call that is made.

as for the TV...well, would watching TV deprive the airline of selling me a movie or
charging me for inflight entertainment.... the sony watchman does not interfere..

I would have no problem using a Ham or transceiver in a Cessna or Bonanza or BEach that I
am piloting... but not in a commercial airliner.... not sure
how the harmonics would interact with the VOR or com reception...
probably not a problem..

all avionics must be certified and RFI and interferance testing is part of the
certification process..

JOHN
composed and sent using vi, the editor all unik geeks love
C
Ham radios and other transceivers, I would not want to operate these on a commercial
airliner but would have no problem doing it in a Cessna or Bo

The PRO-2026 is a clone of the famous Uniden Bearcat 760XLT. A great scanner in it's day, but pretty limited in comparison to what's available today. (Only 100 channels, doesn't trunk, slow scan speeds, etc.) The earlier models (pre-April, 1994) still have some appeal, though, due to their ability to be modified for full 800Mhz coverage.

Radsat's pleased to announce a "new" website about Radio and Satellite
TV, well a mirror site anyway.
If you wish to lok at this site, or the origional site, you can go
to.....

www.welcome.to/radsat OR www.radsat.da.ru

Do you want you site linked from mine? Is it about Radio or Satellite TV or
both?
Then send an e-mail and I will do so after vetting your site and approving
its contents. Send your URL to radsat@wyenot.com

does

You're right, it kinda does. I would be the first to agree (IMHO, as
always)
that this is to a large degree a "we don't really understand this, but we're
sure we don't want the liability" response. On the other hand, it does make
sense to severely limit the POSSIBILITY of interference during the most
critical phases of the flight (T/O and landing). This would become even
more of a concern as GPS becomes more of a primary navigation system,
and consumer electronics moves up into the frequency ranges where
interference with the GPS becomes more of a possibility. The GPS
signals from the satellites are relatively weak already.

Further, it's pretty clear why you wouldn't want laptops and the like - the
heavier sorts of electronic equipment - out and free to fly about the
cabin during those phases of the flight as well.

> I would have no problem using a Ham or transceiver in a Cessna or Bonanza
or BEach that I am piloting... but not in a commercial airliner.... not sure
> how the harmonics would interact with the VOR or com reception...
> probably not a problem..

No, but then if you're piloting, you already know when the transmitter
is on, and would know to ignore anomalous VOR, etc., indications
at the time. You also wouldn't get very far in an airliner with an
HF transceiver, not without an external antenna - and a VHF
transceiver, especially those for the 2m, 220 MHz, and 440 MHz
bands definitely run the risk of disabling or at least degrading
reception in the adjacent aviation bands when they're on. It's
not just the harmonics you'd have to worry about - I doubt that the
adjacent-band rejection capabilities of ANY receiver will be good
enough to be SURE that the transceiver wouldn't upset something.

>
> all avionics must be certified and RFI and interferance testing is part of
the certification process..
>

Sure - but that certification is no guarantee in these cases. For
instance, due to an unfortunate conflict between the way the

aviation frequencies were selected, and the way a lot of video standards were written, one very likely place for graphics hardware clock harmonics to wind up is 121.5 MHz...

One question Bob. When the aircraft is landing and taking off it is closest to the ground, right? Well we sure hope so. The aircraft is most exposed to the various electronic devices including transmitters. Imagine how many cell sites, CB, Ham and commercial transmitter, x-ray machines, plastic curing by RF, and other clean and dirty sources the plane flies by on takeoff or landing. Lets just talk harmonics and overload though. Ouch!

Glenn

BTW, I don't have a problem with the airlines being cautious. Turn them off and put them away please. :-)

Depends on the price and what you want to hear. If your town is using a trunking system the 2006 may be a bad choice. Take a look at http://www.strongsignals.net/ and see what the newer radios can do and what features they have. Read read read! Then compare what you are paying for the 2006 to what you can buy in a newer model.

The 2006 is a good scanner but it is old and getting older.

I imagine it isn;t the noise outside but the proximity to the a/c.
Radio waves would weaken over distance that are several a/c lengths away
from the a/c but what's going on inside....

That is one hell of a scanner. I know, I have had one for a few years. It currently has both the CE -232 interface and the Opto 456 in it. They both work well, and don`t interfere with each other a bit (of course, you can`t run them at the same time !). Fast, with a great receiver, high sensitivity, triple conversion, and easy to use. (Not to mention the ability to , uh ,pick up "certain frequencies" that we dont mention ..... Might just be the finest scanner GRE ever made for RS.....

Some consider this one of the best all around scanners. However, lack
of trunking capability is a bit of a drawback. These go all day on
EBAY at ~$250 and up.

I love mine.

I found that quite interesting- you guessed right.
Thanks for your "off topic" post. I think that most readers of this newsgroup have no problem with interesting links like this once in a while, especially since you explained the contents clearly in your text.

Dunno. I use Xnews freeware, which will let you rescore a group at any
time.

Straw man. People don't filter because discrimination is /complex/, they
filter because some people will never, ever say anything worthwhile. Any
thread they touch becomes a wasteland. And because filtering for
worthwhile keywords and authors makes skimming 50 or so groups relatively
painless.

I thought there was a disconnect in the reply to my message
until I realized that Mr. Hansen is one of those in my filter list.
L.V.X. is correct. While one could weed out the trash by scanning
through the messages, it's much easier to let the computer
pre-filter the list. 20+ years of working with computers has
taught me how to make my life much easier. While computers
still cannot match a human in deductive reasoning, they are
very good at simple and repetitive task like filtering data.

The 2026 also has no capability to add a CTCSS board or an RF amplifier either. That said, I have a friend that has one and is very happy with it. There is no mod for his, but that's ok, he gets the cell just great on the image freqs if he wants them. A great little workhorse, just don't break the bank for it. Post a price and see if people think you should pay that much for it.

I have only found one person since I have been on the net that fits your
description in many many years of usenet. Guess I am not as discrimanting as
you.

>And because filtering for
> worthwhile keywords and authors makes skimming 50 or so groups relatively

Point well taken. I do at times filter specific keywords in threads but
rarely an author. Different strokes or drummer.......

As one can tell I tend to take some things a bit less seriously than others.
To me this is like sitting in a crowded pub except you can hear and join
into any conversation in the room. Sometimes those assholes that sit in the
corner get out of hand. Oh well. No blood and they are easy to ignore.

Yes! What I like to think of as the "sports bar" model of usenet.

I'm an infrequent poster here, and I have no trouble skipping over the
stuff that's of no redeeming value. But in one NG where I'm part of
the regular gang, I had to killfile two individuals. I just could not
maintain the willpower to ignore them. My enjoyment of that NG has
skyrocketed now that they don't exist.

Wouldn't you like to be able to vaporize the loudmouth in the corner?
:-)

Kill files are great when will power isn't enough. Think of them as a
personal food taster who makes sure you don't ingest anything bad.

It is more a pain then a real security system.
Kits a commonly available now.
We studied the system basics back in the mid 60's USAF so the military was
already using this system at the time.

483. LAPD Digital

Newsgroup: rec.radio.scanner
Date: 2001-03-10 19:25:00 UTC
From: Larry Levy <levys@earthlink.net>
Message-ID: <5kvkatgi5mr48vst59ostsp6ocee2fufks@4ax.com>
Source record: 68820

Hopefully, our resident LAPD Communications expert, Harry Marnell will see this, but if anyone else has any info, I'd really appreciate it.

Many of the LAPD 484 Mhz frequencies seem to have gone digital. There is way too much traffic on these now scrambled freqs for it to be undercover ops, so I am thinking these are simulcasts of various 506-507 Mhz dispatch freqs.

If so, are we now seeing the dreaded LAPD switch to digial comms?

Thanks,

-Larry

Its a good idea to go to Dick Smiths and buy a scanner, unles you want
a BC9000xlt. They have discontinued the 9000xlt to make way for the
780xlt. YOu might be lucky to find a store with one left in stock, but
I heard they are all sold out.

Source record: 68825

I have a PRO-64 scanner in very good condition to sell.

400 Channels
Triple Conversion

Coverage:
29-54 MHz
108-174 MHz
380-512 MHz
806-824 MHz
849-869 MHz
894-960 MHz

Date code is 7A7

The radio can be programmed with a computer with a free program called LOAD64 that can be found at http://www.clark.net/~kplotkin/scanner.htm.

No modifications have been made to this radio. Instructions for a "Virtual Downconversion" mod can be found at http://www.clark.net/~kplotkin/ging.htm.

The owner's manual can be viewed online at http://support.tandy.com/support_electronics/36549.htm.

I would like $75 for this radio. I will pay for insured shipping to anywhere in the United States from Lubbock, Texas. I can accept payments with PayPal or money order. I'll take a personal check, but will wait to ship until it clears.

This radio has been SOLD, thanks to all who replied.

Dan

AOR AR 8200 Series 2 for sale. Brand new in box, never used. This is the Euro version which means it is totally uncut. Includes optional case, and 4 MAHA 1550 mAH nickel metal hydirde batteries. This radio was an impulse purchase just after Xmas, (thought I deserved a gift!) but never used. It is an EXCELLENT Receiver, but WAY too much radio for my purposes.

$500.00 shipped, USA only, NO COD, NO TRADES.

I will ask for a US Postal money order ONLY on this one.

E-mail if interested.

Dan

LAPD was suppose to switch over to Astro Digital Non-Trunk by Dec. 1999. They decided to postpone, can't remember why, may have been because of the DNC, until December 2000. I don't know what is the current status now.

I have an opportunity to purchase a "Radio Shack Pro - 92 Trunking
Scanner" for around $180.00 . Is this a safe and smart investment?
Does this scanner pick up Cell or Cordless? Can it be modified easily to
do so if it doesn't already recieve them ?
Trunking radios .... is that like the motorola radios with the two way
radio , cell phone , pager stuff all in one unit?
Thanks for your help

I left CB radio 19 years ago when I got my novice ticket. It felt good communicating with people that knew what they were doing and were proud of their accomplishments in getting licensed. Over the past year things have gotten shitty on the bands and operators are stupid. It sounds just like the CB I left 20 years ago except that the rig's readout is showing a ham frequency. To bad there isn't a better radio service I can go to now that the bands are full of idiots. Thanks FCC, Thanks ARRL, I'm back to 11 meters in the middle of a ham band.

504. Antenna Switcher

Newsgroup: rec.radio.scanner
Date: 2001-03-11 08:32:54 UTC
From: Emilio Goldstien <Emeliog@sofa.net>

I have 11 antennas on top of my dodge colt. I got the best ones available. SOme are for shortwave, others are for police, and 2 are for the space shuttle. I need a way to be able to switch my scanner to the different antennas so I don't have to pull over and do it by hand.

Is such a device available? I doubt they make one for my vehicle, but I will try any available.

Thanks in advance

Sure you did. The fact that you posted this message to nine newsgroups, used a fake identification, and made numerious false statements about ham radio, clearly shows this as an attempt to stir up trouble instead of voicing an honest complaint. If you want to stir up trouble, try not being so transparent next time. Until then, you rate less than a one on the old troll-o-meter.

Hi there!!

I'm developing a frequency database program and would like you all to send me frequencies from all over the worl so that I can put it into the database. When the program is finished and is filled with frequencies it will be released as freeware.
I will post a note as soon as it is availible.
So please take a few minutes to give me some frequencies.
I would appreciate if you write like this:

TX Freq, RX Freq, Modulation (AM, FM etc..), City, Country, Info
146.2125, 150.2125, FM, Norberg, Sweden, Taxi Norberg

Please send the frequencies to: frequency_database@hotmail.com

Thanks for your time.

73, Magnus

You need to get your meter checked, TR. This message was way too transparent to rate a ten. It also lacked the style and sophistication to be a highly rated troll. My meter still shows it as less than a one (and its a generious meter).

Scanners have been my hobby since the first day they hit the market. I have upgraded thru the years since the first change to UHF. The "Code" of the hobbiest was not to misuse the information and maintain a low profile as not to stir up controversy.
Now we have "advertised" live scanners on the Internet so that we can involve the unresponsible masses. If I were to set my scanner live, I would do it discretely for my own personal use.
Yes I know some TV stations run live scanners on their web sites.
IMHO the live scanner will only excelerate the change to digital systems which will kill the hobby for the most of us.

> Now that digital seems to be a way of life for many communities now, isn't it about time that some pressure be put on the FCC and Congress from members of this group? We demand the certification of digital capable scanning equipment for hobby purposes. There are only 500 or so Congress people and 275 MILLION population in the USA.

You were doing pretty well until you got to that last sentence. Of what possible significance is that statistic? How many of the 275 million Americans actually care about listening to public safety communications? (Hint: Damned few in the political sense.)

> Just seems to me that we are wasting a lot of effort by not making some demands of our own. It's true that the wireless phone companies give a lot of money to congress people to get their wishes carried out, but it's the PEOPLE who elect congress, not the Wireless companies.

Missed again. How much of the expense of your local congressperson's last campaign did YOU help him or her to meet? Remember too, the current administration is pro-big business. The megawireless companies should have an even easier time getting what they want for the next four years.

Try Michigan Radio....they are located on Groesbeck in Roseville (I think that's the city), and I think it is around 10 mi or 11 mi rd. If you are headed south on Groesbeck they will be located in a tannish colored strip mall on the left. Sorry I don't have the address, but I know where it is! Neat place.

The amount of people who listen to scanners are very small.
The majority of this very small group are good people who just like excitement.
Then there are criminals who spoil it for all of us.
There will always be a way to thwart the system though, even encrypted digital
radio transmission. Why? Because the same people who design the radio's are the same
people who go their own way for money or disgruntled and end up helping the bad side.
For example, the exact people who designed the RCA DSS Satellite dishes and electronics
in Mexico are the same people who are now running clandestine "card" operations which allow
you to get all satellite channels. They did it because RCA treated them wrong or didn't
show them
appreciation, so they became loyal to themselves instead of the company.

On the other hand, criminals have to use technology in order to keep up
with the police and there are apparently many criminals using scanners.

I think not. Let's think about this. You are a criminal who wants to tune into the cops to commit crimes...Are you going to lug around a laptop and RF modem to listen to cops or are you going to go to Rat Shack and grab a scanner for much less? Live scanner feeds don't add to crime at all. If anything it let's people who know little about scanners and Trunktracking to listen in. Imagine that, actual citizens might actually hear what their police & fire really do. I have a live scanner feed going and I have never had any police agency even E-mail me with concerns. If they asked me to take a TG off the list, I would. Fact is, they don't care because they know there is nothing wrong with it.

Message-ID: <3AABC99E.1F6C@bellsouth.net>
Source record: 68761
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc

I have 3 (counting the AM/FM). There are only 2 comm. antennas: one is a homebrew 3" screwdriver, the other is a dual-band 2M/440. Incidentally, I, too, used to have an "antenna farm" and a car full of various ham and military-type rigs. But as the technology advanced, I was able to reduce the number of antennas--much to my satifaction. Finally, with the advent of the IC 706 series, I eliminated a scanner, a 6M rig, a CB, and another separate 440 radio. So now I have ONE radio and 2 antennas. I don't talk on CB (I just listen for traffics snarls), and I discovered by accident that the screwdriver would work 6M (harmonically).

About 25-28 years ago, there was a surplus dealer in Charlotte, NC that stockpiled hundreds of military VHF antennas. They had a small black coil at the bottom and were, supposedly 5/8 wavelength. The whip was OD green and slid up and down within a locking ring. The top of the whip (stinger) was flexible. There were markings on the bottom portion that indicated the frequencies between about 130-170 MHZ. Perhaps some of the readers have seen these. I substituted a steel whip for the original mast/stinger, and it makes for a low profile VHF/UHF antenna. I never had any instructions for these antennas, so I assumed it was strictly for VHF, and I used it this way for many years. (I bought a bunch of them in the late 70s and sold them at hamfests. Original price was $5.00 from the surplus dealer). Recently, I changed the radio out of an old vehicle and into a '93 Lumina. While setting up the antenna, figuring to remove the Larsen dual band from the old car, I discovered that that military antenna worked VERY well on UHF! How nice!

I never was "too" crazy about having bunches of antennas on my cars, but I always operate under the premise that if I *HAVE* to have an antenna to do a certain job, then so be it. I have friends that seem to get a kick out of having many antennas on their cars. One guy I know, really nice guy even tho the general public regards most people with lotsa antennas as "weird", has 7 various and sundry antennas strung across the back of his Olds. The odd thing is, *some* of them are duplicates. For example, he has 3, yes 3, scanners that cover the same bands/ranges and 3 antennas to go with them. He has 2 CB radios and 2 antennas (??????). There are 2 2M rigs and 2 antennas for those---and so on. I'm not criticizing him, but I cannot fathom his reasoning for it, either. Is it *really* needed, or is he just "showing" off? Diff'rent strokes.....

Then you need to get a new meter. His meter detected a troll, period. Don't you think that something as dumb as a meter would register a 10 on, as you say, something as transparent as "ARRL's" post? Also, try using your spell check. When a person flames another but in the process misspells a simple word as "generous", they tend to lose all credibility.

Hi
I have two SSB transceivers for sale/trade, they are both in as new condition
both are boxed and complete with all leads, brackets and manuals.

Modifications have been carried out by a Professional Radio Technician employed by Lowes Electronics in the UK (personal friend)

1--President Lincoln 25.000 to 30.000 MHz all modes, AM/FM/USB/LSB/CW.

2--Ranger TR-696F as above but 26.100 to 30.000MHz all modes inc Weather

I am asking ?150.00p for each radio or ?250.00p for the pair
that would be $220.00 each or $366.70 USD
I would also be interested in a trade for a base-HF Receiver 0-30MHz
must be good condition.

The scanning community is a small group, partly because it takes special radios
to enjoy to it. A small threat. Put it on the Internet. Now there is the
potential of 50%+/- of the homes in your town to listen in. Threat of misuse
much larger.
Criminals unfortunately will always be there.
New radios to decipher the new systems is a given, but that equals more
downtime for our hobby and more bucks out of our pockets.
I repeat, why accelerate the change?

The criminal element is going to be there regardless of what the hobbyist does.
If half of your community is listening in, some of that half will abuse the
privilege. Some of our younger citizens have not developed a sense of values
as of yet.
I am not saying what you are doing is wrong, I am just throwing out food for
thought.
If you flaunt what you've got, whatever it is, you have a greater chance of
losing it.

get a normal ham radio switch box. you can get em for most HF equipment to switch between HF antennas. all it is, Is a box that has one out and about 4 input. but all are so-239's. if you have make a sheilded box. Throw a switch in it.with the amount of connectors. and switch between them. that will work. i am speeking crudely. but I can tell you in more detail if needed..

Hello

I Just sold my bearcat 9000, and I'm after a good little handheld unit,
preferably not realistic or Uniden..
Anyone have any ideas? I'm heavily leaning towards the new MVT 7300, but
would appreciate some feedback from experienced users.

Thankyou,

545. FS : RELM HS-200 portable scanner - SOLD

"The inFamous KS&#65533;F" ALIAS Toilet-Boy , HIDING @ mackey@parg.org> wrote

> When was the last time YOU posted on topic, Glenn Hansen, KB7PKC?

At least 4 in the last four days Toilet-Boy. Many more before that Toilet-Boy. You haven't posted 4 on topic posts in the last 4 days Toilet-Boy. Nor 4 on topic posts in the last 4 weeks Toilet-Boy. Nor 4 on topic posts in the last 4 months Toilet-Boy. Nor 4 on topic posts in the last for years Toilet-Boy.

You may have posted 4 on topic posts in your life but that is only with the most liberal interpretation of on topic posts Toilet-Boy.

Now, what's you point Toilet-Boy? Denial Toilet-Boy, that's all you are good at.

BTW Toilet-Boy, I don't post my callsign with my name on this group. I am embarrassed to be associate with anything you are Toilet-Boy.

THE UNDISPUTED JOHN TOILET-BOY FACTS
FACT# 1. Quite crossposting your trash Toilet-Boy. You keep adding newsgroups just to gain more attention and piss more people off.
FACT# 2. See my message below. It ADDRESSES YOU Toilet-Boy. You KNOW YOUR name and came running Toilet-Boy.
FACT# 3. I have presented my proof along with 3 other people that you were swearing and throwing a tantrum on the 523 repeater Toilet-Boy. Your defense is the repeater owner hears EVERY conversation on all 5 of his repeaters 24/7 and he didn't hear toilet-boy so it must not of happened. This is similar to toilet-boy putting his hands over his eyes and believing nobody can see him.
FACT# 4. You did exactly what I said in line one below. Word for word Toilet-Boy
FACT# 5.You answer to the name Toilet-Boy
^^^^^^^^^^^^^^^^^^^^^^^^^

I have a number of antennas for sale as a bunch.

1 trunk lip mount antenna with 2 interchangeable whips.
one 3 1/4" for 800mhz. and one 14" with coil for 800 mhz
gain, uhf, and vhf hi & low. with coax and bnc connector

1 maxrad magnetic mount with rubber base for non- scratch
includes a a 14" whip for multiband vhf lo, hi, uhf and 800mhz
with coax and bnc connector

1 magnetic mount with 14" whip for multiband vhf lo, hi, uhf
and 800mhz with coax and bnc connector. old, but works well.

1 rubberduck gain antenna for 800mhz, 9" tall and black
with built-in elbow connector and bnc connector.

1 rubberduck gain antenna for 800mhz 6" tall and black
with bnc connector.

all for 40.00US includes shipping via US post.
(international postal check or certified check)
please.

thanks

The Pro 92 has been on the market for well over a year and has been one of the favorite scanners of radio listening enthusiasts. It is not only a lightweight alternative to heavier models, but provides much better audio capability than more expensive scanners that don't have speakers.

This model is a "Trunker" which means it follows the transmissions of radios as they change channels. Not all radios change channels, but when they do, the Pro 92 will be right there helping you follow the action.

The police are very wary of radios like the Pro 92, as well they should be, since all of their conversations can be overheard using this radio. I've had mine confiscated more than once, and even spent some time in the local jail just for playing it really loud.

I urge you to use caution and not turn up its volume at hostage scenes. This has been determined to be a "detriment and hindrance to operations", and could jeopardize the situation, and even cause someone to be killed again.

Also remember that listening in on phone conversations is your right by law, because these radio waves pass through your body, and therefore become your property for a millionth of a second. Just remember not to announce what you hear like some people do on this newsgroup, as that kills off the hobby. There are many nitwits out there that advertise their activities which causes laws to be passed, and technology to advance beyond the reach of their wallets and antenna festooned houses.

Also there are several versions of the Pro 92, because Radio Shack never got any of them quite right. Which model you get depends on which Radio Shack you visit, and how little the employee knows.

All in all, I'd say you should give the money to charity where it might do some good, instead of spending it on a self gratifying and annoying-to-others habit.

How are they going to abuse it if they are sitting at home on their computer? It's cheaper to buy a TrunkTracker than it is to buy a computer.

If my Police agency came to me and told me some of the concerns they were having, I'd have no problem removing TG's or helping them out. Heck, if someone were to figure out a way to listen to it while they were committing a crime and the cops knew, it'd be real easy for me to stick in a tape from 5 days ago while they go raid the place.

FWIW, most of my connections come from areas far far away. Canada, UK, Holland...I can't figure out why but who cares.

It was a joke, Jeff. There isn't a meter, and my message wasn't a flame.
And I certainly wasn't seeking "credibility" with nonsense such as this.

As for the fake meter, it isn't an on/off meter (on for troll, off for no
troll). It is a meter that rates a troll on a scale from one to ten. Since
this troll was so obvious, it simply doesn't rate very high as a troll in my

opinion.

However, since you control your own fake meter, you're free to rate the troll how you want. And I assure you that I will not hold your troll rating against you. [insert big grin here]

> Have you ever heard the phrase, "Government of the people BY (not BUY) the people?"

Yes, it's a phrase that someone who is earning a doctorate in criminal justice would hear from time to time. It is also a phrase that someone who is cognizant of political realities would learn to take with a grain of salt.

> I don't think the scanner companies that have been around for awhile could stay in business using the attitude that "there's only "x" number of people listening to public safety radio.

Name one company that builds scanners as its primary business. I don't think you can. The ones that might have operated that way are long gone. Uniden, GRE, Tandy Radio Shack, Icom, Yeasu, AOR, etc. are all electronics companies, not scanner companies. For example, Uniden includes cellular phones among its major product lines. That's where the money is, not in scanners.

> What's frightening is that apparently, they aren't even fighting this revolution.

Why should they? Their main businesses are protected by the government. Scanners don't amount to more than a mildly profitable sideline.

Interesting thoughts.If a crook wants to listen and use a scanner or a scanner feed on the net for commiting a crime then they will. The last time I looked a criminal wont follow the law, rules or whatever. They will do what ever they need to wether we provide the ability or not. Also I dont have any statistics to back this comment up but I would suggest that the number of criminals out there that would use a scanner to commit a crime is very small.I think we as a scanner enthusiasts would benefit by letting the public know that we are not using scanners to create problems for society but rather to keep us informed of goings on in our community or in an area of interest to us. This is still a free country as long as we dont try to shut out the public from knowing what goes on.
Just my two cents worth!!

These are 4800 baud modems. Use Reed-Soloman error correction.

If you live in the southern Calif area and want to monitor LA County
Fire or Verdugo Fire MDTs, this is what you want. There should be many
other agencies across the country that use this equipment.

No, this isn't the 4800MDC format everyone can get with a cheap
data-slicer. Click on the URL below for a sample *.wav file if you
need to verify if the system in your area uses this protocol.

http://www.geocities.com/shojiki2000/iqsnip.wav

Looking to get $375 each but will entertain offers.
Please email me with any questions.

Thanks,
- Shojiki (add @hotmail.com for my email address)

>

There are now license free frequencies via MURS; with the new service you can do voice, data, video, and more, though the ERP is only 2W you can find some activity there.

See a page setup by PBScanner:

http://www.expage.com/murs

As far as blame to lay, it is the flap operators that made the Ham bands that way.

BTW: a post to a Ham related group would fit this issue much better as this Newsgroup is devoted mostly to scanners.

Best of luck, hope things brighten up for ya .

593. FS: VR-500 Receiver (Not blocked)

Newsgroup: rec.radio.scanner
Date: 2001-03-13 00:19:30 UTC
From: silver506@aol.com
Message-ID: <20010312191930.06848.00000977@ng-fj1.aol.com>
Source record: 68731

VR-500 is a high-performance miniature handheld communications receiver providing general coverage reception from 100 kHz to 1300 MHz on the CW, SSB (LSB and USB), AM, and FM (Wide and Narrow bandwidths) modes (this coverage includes the AM and FM broadcast bands, HF Short-wave Bands, VHF and UHF TV bands, the VHF AM aircraft band, and a wide range of commercial and public safety frequencies!).

Main Features:

Frequency Range: 0.1000 MHz - 1299.99995 MHz
Regular Memory; 1000 Ch, (100Ch X 10 Banks)
Skip Memory; 100 Channels
Search Band Memory; 10 Channels
Dual Receive Channel Memory; 10 Channels
Priority Memory Channel; 1 Channel
Smart Search(tm)
8 Character Alpha Numeric Display
Direct Keypad Frequency Entry

I also am selling the software to program this receiver and the cable to enable you to do so from your computer. Asking$250.00.

Cellphones drowning out police radios
Mobile communications explosion interferes
with signals -- and the results can be deadly
By Paul Davidson
USA TODAY

Cell towers cause 'dead spots' in police-fire radio coverageWASHINGTON --
''One Adam 12.''

''Car 54, where are you?''

The police radios that popularized those refrains on TV cop shows worked as reliably as quartz watches. In the real world, such dependability can be a matter of life and death.

''That's your lifeline; that's just a given,'' says Kansas City, Mo., detective Robert Blehm, who took that popular image to heart.

But as Blehm and his partner, Derek McCollum, ran after a drug dealer at 4 in the morning on Sept. 18, 1996, they got dead air when they tried to call for backup on their new handheld radios.

As they cornered the suspect, he shot them both. Blehm -- lying in the street, blood gushing from his shattered right leg -- tried calling again. Again nothing.

Finally, McCollum, shot in the chest but still able to move, stumbled up the street until he found a clear signal and summoned help.

The shooting victims were also victims of progress. The once-dependable police radio is literally being drowned out by a torrent of information-age services, such as wireless phones and instant messaging, that have made mobile communications available to millions of Americans. Even as police, fire and emergency medical services upgrade to pricey new radio systems, dozens of agencies -- including those in Seattle; Portland, Ore.; Denver; and Miami -- face increasing interference from more powerful commercial wireless services.

''This is a very big problem, and it's going to get worse'' as cellular's customer base grows, says Ron Haraseth of the Association of Public-Safety Communications Officials.

In Tigard, Ore., recently, police twice were unable to radio for backup while facing armed suspects because of cellphone interference. Part of the problem is the fact that Kansas City's police force and others, beset by

tight budgets and poor planning, have been unable or unwilling to build sufficient infrastructure to support their new, but more terrain-sensitive systems. And many agencies simply find their new, feature-rich radios tougher to use and more prone to breakdown.

In the 1960s and 1970s, ''there weren't as many users, and systems were simpler,'' says Chuck Jackson of Motorola, the top maker of emergency-service radios. ''There was a microphone and a speaker, and you talked over it.''

Some officials blame the Federal Communications Commission, which supervises the airwaves, for not doing more to head off the current traffic jam. And experts say the FCC's plan to divvy up a new band of radio spectrum -- ostensibly to fix the problems -- may just replicate current congestion.

FCC critics, moreover, say that the agency, under pressure to wring as many billions of dollars as possible from auctioning airwaves to commercial carriers, gives second-class consideration to public-safety agencies that get the spectrum for free. The FCC says it balances both interests.

However the blame is shared, the bottom line at street level is that the ongoing glitches have caused an untold number of close calls, at least a few injuries and may have contributed to the death of a police officer.

''It could mean life or death to police officers, firefighters and even citizens who are not able to get prompt emergency service,'' says Harlin McEwen, a retired police chief who handles telecommunications issues for the International Association of Chiefs of Police.

Public-safety radios traditionally worked in the relatively uncrowded 400-megahertz frequency band and lower. Interference was rare and came from taxis and other services on nearby channels, whose conversations were brief.

But as metro populations swelled, police, fire and medical agencies lacked enough channels to handle growth in their own ranks. The sprawl also complicated another concern: Departments typically cannot communicate by radio with neighboring agencies whose equipment works on different frequency bands. This still is a nationwide problem during major fires and other disasters involving multiple jurisdictions.

To fix both problems, a growing number of agencies across the USA the past decade have been upgrading to new equipment that works in the 800-megahertz band, which has more capacity and allows more features. And neighboring communities often move there in tandem, so they can communicate with each other.

Fix breeds new problems

But that slice of spectrum is the same space occupied by the exploding wireless industry. And it brings its own headaches:

* Wireless interference. Much of the commercial interference with public-safety radios comes from cellphones. And, for historical reasons, the cellphone company causing the most problems is Nextel Communications.

Until recent years, Nextel operated a mobile radio service for taxis, truckers and others. In the 1970s, the FCC interlaced Nextel's channels with those of other mobile radio services, including public safety. It did so because it thought each organization's channels were more vulnerable to interference from its other channels than from someone else's channels.

It's not clear whether this belief was correct -- the FCC had few resources for testing back then. But the legacy is that in each market, dozens of police and fire channels abut Nextel channels. For years, the layout caused few problems because both Nextel and public-safety agencies used a radio system design: a handful of towers on hilltops beaming wide-area signals.

Cellphones create coverage gaps

But in the mid-1990s, Nextel morphed into a national cellular phone company, which required it to dot cities with dozens more towers. The result is that its transmissions now can overwhelm relatively weak public-safety systems on nearby channels and create coverage gaps that can reach a mile, especially near cell towers.

Other wireless phone providers, such as AT&T and Cingular Wireless, also cause interference. But because their channels were granted in separate blocks, they wreak havoc only where they meet public safety's block. ''In almost every region of the country we're hearing complaints,'' says Mike Hunter, president of engineering firm RCC Consultants.

In Anne Arundel County, Md., police officers are plagued by eight ''dead spots'' where Nextel and Cingular have towers. The problem came to a head last year when an officer stopped a speeding car and could not reach dispatch. As he wrote out a ticket, another officer stopped to warn him that the driver was a shooting suspect.

''It was getting to where officers, who are pretty courageous, were starting to get very uncomfortable,'' says Anne Arundel Police Chief P. Thomas Shanahan. The county recently agreed to buy a new $15 million radio system.

In Phoenix, Nextel transmitters hamper the police radio data system, which does background checks during traffic stops. ''Certainly people guilty of crimes have been let go because the officer couldn't get through,'' says radio manager Melvin Weimeister.

In Portland, Ore., Nextel's system -- which has 80 towers in the area vs. the county's 14 -- ''is like the biker gang that moved next door, banging and raising hell,'' says Joel Harrington, who handles city communications there. Officials are considering a more robust $50 million radio network, he says.

Most of the time, the interference means hassles rather than disaster: Officers must travel farther to get a signal, carry cellphones and bring backup when entering static-prone areas. And Nextel, officials say, has been a good neighbor, agreeing to switch channels, reduce transmitter power and sometimes even move towers.

''We take reports of interference with public safety very seriously,'' says Larry Kervor, Nextel's vice president of government affairs. But the company, he says, is ''fully in compliance with the FCC.''

The FCC, in turn, says that years ago it simply did not anticipate Nextel's cellular service.

Remedial measures are of limited value, says Tom Eckels, an engineer with consultancy Hatfield & Dawson. A long-term solution would be to move Nextel and public-safety channels into separate blocks. But it would take huge sums to reprogram equipment. Many towns couldn't afford it.

Portland and other cities are considering moving to the 700-megahertz band to be vacated by UHF television stations as they switch to digital broadcasting. But radio equipment for that band won't be ready until mid-2002.

And some experts contend that the FCC's new plan for that band will make it just as crowded. The agency first designed the 700 band with public safety in its own block and more space between that block and other wireless carriers. But the FCC revised the plan last year, and critics say it now allows carriers to operate powerful transmission towers in channels that are too close to public safety.

''It's a significant concern,'' says Steve Sharkey of Motorola, which asked the FCC to reconsider. The FCC turned it down, saying interference should not be a problem.

McEwen of the police chiefs group charges, ''The FCC changed the rules to get more money from auctions, but they're putting public safety at risk.''

Tom Sugrue, chief of the FCC's wireless bureau, replies, ''That's just wrong.'' He notes that ''radio spectrum is a limited resource that everyone wants'' and that the FCC must balance competing needs.

* Need for more towers. Although radio signals in the 800-megahertz band are clearer, they typically don't dance around hills, trees and buildings as deftly as their predecessors. They also have more trouble penetrating big new, reflective-glass buildings.

The solution is to build a bigger network. But budget-conscious cities often don't realize or want to accept that upgrading to 800 megahertz requires adding many more towers than their older systems needed, RCC's Hunter says.

In Kansas City, officials decided: ''This is how much we want to spend, and this'll do,'' says Bob Lawrey, communications manager for city police.

The city recently had to enhance its new 800-megahertz, $18 million system with $10 million worth of additional antennas.

''I was pretty upset that they expected us to do this job, and they gave us substandard equipment,'' says Blehm, 29, the wounded officer who has settled a lawsuit against his assailant, the city, the city's radio consultant (SFA) and the maker of the radios (Ericcson).

Assistant City Manager Rich Noll said officials thought the original network would be sufficient.

Orange County, Calif., installed an $80 million radio system last year. But the system design did not adequately account for the area's maze of malls, apartments and offices.

Recently, as a SWAT team searched for a suspect in an Irvine office building, Orange County officers could not radio colleagues outside to let them know the team was coming through the door. The county is now debating more antennas.

In Delaware, firefighters often resort to blaring sirens to let colleagues know that a blaze is spreading or a floor is caving in. That's because Delaware's new $52 million, statewide radio system doesn't work in five communities, including tourist hotbed Rehoboth Beach, or in large buildings. Motorola has agreed to add signal boosters at no cost, and the state will spend $10 million to improve performance inside buildings.

Police officer shot to death

Problems turned tragic in Atlanta. In 1997, as two officers responded to a domestic dispute, the man became aggressive. Officer Patricia Cocciolone says she tried to call for help, but her radio didn't work. The man emerged with a rifle and critically injured Cocciolone. He killed her partner, John Sowa.

Chip Warren, vice president of the police union, says the city has balked at spending to add antennas to its $39 million, 6-year-old system. ''This is putting troops' lives in danger.''

Atlanta Police Maj. Bill Gordon says the problem is not widespread and says Cocciolone's radio worked, contrary to her testimony and media reports.

Experts also note that every radio system has dead spots: buildings, low spots and other nooks where signals will not reach. Says Eckels of Hatfield & Dawson: ''Nobody ever can afford to build the perfect radio system.''

* More complicated equipment. New 800-megahertz radios sport fancy features, such as emergency buttons to alert dispatchers to trouble and automatic scanning for an open channel.

But some officers have had trouble using them. Before, they searched for open channels themselves, listening to colleagues' conversations as they scanned. Now, if the airwaves are busy, they hear a beep and must wait for a channel. ''We've had officers frustrated during a shooting because they get a tone,'' says Portland Assistant Police Chief Bruce Prunk.

A Kansas City dispatcher, bewildered by a new 60-channel radio, responded on the wrong channel to firefighters calling for hoses, forcing them to jump out a first-floor window to escape a blaze.

Though time and training should ease many of these concerns, the feature-packed new radio systems are also more glitch-prone.

''The systems are full of controllers and microprocessors and software,''
Hunter says. ''There's a lot more to go wrong.''

Bad things can happen if agencies can't talk
By Paul Davidson
USA TODAY

WASHINGTON -- Many public-safety agencies around the country cannot communicate on their radios with agencies in neighboring jurisdictions because they use incompatible equipment -- a gap that could lead to tragedy.

Sometimes even police and fire agencies in the same town can't communicate.

The problem is underscored during major fires, car chases and other incidents that draw response from several communities. ''No one should lose his or her life because we cannot communicate,'' says Derek Siegle, an FBI manager and member of the Public Safety Wireless network, an ad hoc group working on the problem.

Examples of miscommunication:

* During rescue efforts after the 1995 Oklahoma City bombing, local police, suspecting there might be a second bomb in the tattered building, ordered everyone to evacuate. State, federal and local fire officials did not get the message for several minutes -- until they were told in person. Fortunately, there was no bomb.

* After an Air Florida jet plunged into the Potomac River in 1982, Arlington, Va., fire and rescue workers sped to the scene, then tried in vain to call for help from Washington, D.C., counterparts.

* During a 1999 fire that destroyed a row of shops in Ellicott City, Md., local fire officials could not talk to counterparts from neighboring counties. Runners had to relay messages from firefighters at the front of the building to those in back. ''It makes it really hard to do business,'' says former Howard County fire chief Jim Heller.

The heart of the problem: Analog radio systems built for specific frequency bands, such as 400 megahertz, can't connect with radios on other bands. And digital systems from different manufacturers generally cannot talk to others at all because they are based on different digital standards.

Help may be coming. Some neighboring agencies have bought new 800-megahertz radios together to be compatible.

And the Federal Communications Commission recently set aside channels in the planned 700-megahertz band for communication between agencies. The FCC is requiring makers of digital equipment for that band to use a common standard

and also to make radios able to communicate with late-model analog equipment.

Meanwhile, emergency officials make do by sharing radios, carrying cellular phones, patching calls through dispatchers using phone lines and setting up makeshift command centers at the scene. ''You do whatever you have to do at that moment in time,'' Heller says.

Secure police communication protested
Digital radio systems shut out helpful public

By Karen Balsley
The Journal Gazette
Don Stilwell once helped police catch a criminal.

While driving on DeWald Street and listening to his portable police scanner a few years ago, he heard officers receive a call of a burglary at a nearby house.

Stilwell drove by the house, heard an engine start up, and jotted down the license plate number of what turned out to be the crook's car.

Stilwell, a Fort Wayne resident, would never have known the crime was taking place had it not been for his scanner.

His crime-fighting days, however, might soon be over.

With a new digital 800 megahertz system developed by Motorola slated to be in place locally by late fall, the public will no longer be able to listen to police, fire, and other agencies' transmissions in Fort Wayne and Allen County.

The Society of Professional Journalists, a national organization that works to protect First Amendment guarantees of freedom of speech and press, believes this kind of radio communication system "impedes the public's right to know and the media's role as a watchdog of the government."

There is no state statute, however, that says the public has the right to listen to radio traffic of government agencies.

No store-bought scanner invented to date is capable of picking up digital communication traffic. Only the radios designed for a specific agency's system can be used to listen in on police, fire and other emergency traffic using digital technology.

Local officials have pledged to cooperate with local media and allow them to purchase police radios - which cost several thousand dollars each.

Having lived in a household with a scanner since he was a teen-ager, Stilwell views the act of keeping tuned into police and fire radio traffic less as a hobby than as a call of duty.

"The police department can't do everything by itself," he said. "Without the public's help, a lot of things aren't going to be solved."

Digital vs. analog

Fort Wayne and Allen County's communications centers now use what are called analog systems. That means voices are transmitted over the airwaves, where they can be picked up by any radio or scanner in the area programmed to pick up the right frequencies.

The new system planned for the area uses digital technology. It will also use airwaves to transmit information, but instead of sending out actual voices, a computer inside a radio or the dispatch center first turns voices into streams of data. The encrypted data are reconstructed in the form of the speaker's voice when they are received by the computer in the listener's radio.

When that data is picked up by scanners or radios that are not part of an agency's communications system, a high-pitched squeal will be heard rather than voices, said Chief Deputy Mike Bedwell, director of Fort Wayne communications.

Fort Wayne and Allen County operate off two dispatch centers and have been working for years to develop a joint communication system. While the two will remain separate, county and city workers will have the ability under the new system to communicate directly to one another via hand held radios. Currently, a county officer who wants to get a message to a city officer must contact county dispatchers, who then telephone the city dispatchers, who in turn relay the message to the city officer over the radio.

The digital system can also be expected to improve sound quality and eliminate a lot of background noise and static, Bedwell said.

The state is working on developing a similar system that would allow such communication between agencies at local, county, and state levels. Meanwhile, Allen County and Fort Wayne will be keeping some of its analog equipment for use of non-emergency agencies, such as the street department, and use it to communicate with other counties, Bedwell said.

Digital communication technology is the way of the future, according to Bedwell. Across the country, including in some counties in Ohio, government agencies are replacing analog systems with digital systems.

A number of local officials say they are not necessarily in favor of preventing the public from listening in on police and fire radio transmissions, though they admit that doing so has its benefits.

"For the most part, the people who listen to scanners are supportive of police; they're our best friends," Allen County Sheriff Jim Herman said. "I have no problem with people having scanners, and I'd be happy to have them listen."

Shutting out the public

There is an ongoing debate as to whether private radio transmissions among government agencies is beneficial or detrimental.

A closed system, some officials argue, would prevent crime suspects from hearing law enforcement tactics first-hand. Others say closed systems prevent curious onlookers from cluttering up a crime or accident scene and impeding police, fire or other emergency personnel in doing their job.

Digital systems are encrypted by nature, but law enforcement officials nationwide have expressed concern over communications systems that criminals can easily hear, said Keith Kemmerline, assistant architect with Motorola. The company kept those concerns in mind when designing its newest system, he said.

An example of that safety concern was shown by seven men who broke out of the John B. Connally prison south of San Antonio on Dec. 13. Two days after their escape, two of them robbed a Radio Shack near Houston, taking, among other items, a number of police scanners.

On Christmas Eve, all seven allegedly robbed a sporting-goods store near Dallas, killing one officer. They then eluded officials for several more weeks.

Proponents of an open communication system, however, say the media and the tax-paying public have the right to monitor government agencies and argue that law enforcement agencies already have the ability to transmit confidential information.

The Society of Professional Journalists' Cincinnati's Pro chapter issued a letter to government officials of Clermont County, Ohio, protesting implementation of a $12 million, 800 megahertz radio system.

"Scanner traffic can alert the media to situations as routine as a traffic accident to as serious as a manhunt for a killer," wrote Tim Bonfield, president of the Cincinnati Pro chapter.

"We believe most police organizations already have the ability to quietly communicate sensitive or tactical information. We challenge law enforcement agencies in Clermont County and others that may be considering similar policies to demonstrate how public scanners have impeded law enforcement and to justify why these concerns would outweigh the long-established public interest in maintaining openness in government activities."

Fort Wayne police have had digital capabilities since 1998 in the form of laptop computers in their squad cars, Bedwell said. Dispatchers can also make voice channels private in emergency situations, he said.

Steve Key, a counsel for governmental affairs with the Indiana State Press Association, pointed out that there is no law stating that government agencies must allow the public access to its radio frequencies.

"SPJ's point is the public's ability to monitor the normal radio traffic allows them to keep up on the efficiency of law, fire, and emergency services," Key said. "By cutting off that ability to monitor, it makes it more difficult for the public and media to make intelligent determinations on how the police (and other agencies) are doing."

`A market for it'

While Allen and Clermont counties have vowed to provide media with access to encrypted communications that the public will not have, the Society of Professional Journalists argues that many media organizations, student journalists, photographers and free-lancers will not be able to afford the new equipment.

Radios like those used by the Fort Wayne Police Department, which Bedwell has been working to secure for the purchase of local media, cost about $3,000 each.

Herman agrees with Stilwell and other scanner enthusiasts that the public can serve as a watchful eye for the authorities.

Herman said there have been cases in which a vehicle being sought by officers has gone by the home of someone listening to a scanner and that listener has been able to help officers pinpoint where the vehicle had gone.

Many times, however, citizens with good intentions can lead officers to the wrong car or in the wrong direction, thinking they've spotted a suspect, Herman said.

Dave Diehl, a reserve officer for the Angola Police Department and a former Angola firefighter, supports the idea of a closed communication system and would like to see Steuben County make the move to digital technology.

"The digital system provides more of a secure method of transmission, and you don't get the onlookers at an accident scene when it's close to their home," Diehl said. "It takes four minutes to clutter up a fire scene on a quiet country road with spectators who heard it all on their scanner, making it dangerous for fire personnel to cross a road and get water to the scene.

"On the same token, (with a closed system) officer safety is not compromised when serving warrants because the `bad guy' has no idea that you just surrounded his house."

However, Diehl, who also works for a Radio Shack in Angola, added that the public would lose out on hearing what roads might be closed and about what havoc the weather may wreak. He said the store sells about four or five scanners a week, and sales tend to go up around tornado season or whenever bad weather hits.

While digital scanners will not be available when the digital system comes to Allen County, many believe they will be someday.

"I'm sure with the technology, someone will find a way to get around it," Stilwell said.

Kemmerline, Motorola's assistant systems architect, agrees, guessing such scanners could be available in less than 10 years. If and when that technology develops, he said, Motorola will look into providing software that would keep criminals from being able to listen.

He did not forecast much resistance on Motorola's part in continuing to keep the general public from hearing digital radio traffic.

"Someday, they will invent digital scanners," he said. "I don't see why not. There would be a market for it."

TrunkmaxPro's site sucks

#1 they want you to sign up for a searchable database of frequencies = which
you can get for FREE from the FCC now - or even percon

#2 Live 365 is free

give it up trunkmax - you suck

Recently my fuel gauge on the car has been sticking.
I think that there is some moisture in the pivot or spring that is freezing
and producing this effect.
Do you know of a way of freeing it without removing the dashboard?

Hi.

After about a week looking at what scanner to buy I decide on the ICOM
IC-R2.

Then I see this new Yaesu model (VR120) is out or nearly out.

No I do not know what model to go for. Any help?

Thank you.

Jose Luis

I am in the market for a handheld receiver. I had an Icom R-10 at one time and wasn't real impressed with it. I am now looking at the new Alinco DJ-X2000 and the AOR 8200 Mark II B. I would like some feedback from anyone who could give some unbiased opinions. The price of the Alinco and the AOR are within $20.00 of each other.

More likely it's the "sending unit" located in the tank.
Overfilling-"topping off"- the tank excessively can cause this.
Sometimes it has to be replaced to correct the problem.

Dick

Hi Dean -- unbiased opinions are made by non advertising labs. Biased opinions are what invariably comes from users or labs that carry product ads -- just kidding.

Anyway have you seen e.ham.net reviews for "biased" opinions, Has the two AOR reports but no reports on the Alinco.
At URL:
http://www.eham.net/reviews/products/8

Also has your ICOM R-10 at URL:
http://www.eham.net/reviews/detail/426
Would be interesting to compare notes since you owned one.

617. Cell Phones Kill Again! If You Tell a Lie Often Enough...

Newsgroup: rec.radio.scanner

Well here we have it folks, cellular phones are killers.
According to this USA today article the reason government trunk radio systems fail is because of cell phones. Not that the digital and analog trunked radio systems are flawed systems from beginning to end. Never mind that over the next 10 years billions of tax dollars will be spent by governments to have fancy digital systems where if there isn't a tower within one mile of a handheld or mobile unit the signal will not get through.
Is it really time to create a national fire network of entirely digital radios that we can hope the fire fighters will be able to call for help on? These advanced radio system are truly a Fleecing of America. Instead of using narrow FM channeling and systems that cost millions less the government through the FCC and APCO are pushing this expensive technology down the throats of the American taxpayer. Whether it is digital radio for government agencies or the flawed digital TV concept the taxpayer is being ripped off. The truth is that digital works fine for wired systems, but for radio transmissions it sucks and it is prone to all kinds of problems. That is the real problem with these radio systems not that there are cellular phones in use. For the analog trunked system hasn't Motorola ever heard of CTCSS? And why not move them to 400 MHz where the signals will travel farther and not be subject to nearby cell phone towers?

Cellphones drowning out police radios
Mobile communications explosion interferes
with signals -- and the results can be deadly

By Paul Davidson
USA TODAY

Cell towers cause 'dead spots' in police-fire radio coverage WASHINGTOn --
''One Adam 12.''

''Car 54, where are you?''

The police radios that popularized those refrains on TV cop shows worked as reliably as quartz watches. In the real world, such dependability can be a matter of life and death.

''That's your lifeline; that's just a given,'' says Kansas City, Mo., detective Robert Blehm, who took that popular image to heart.

But as Blehm and his partner, Derek McCollum, ran after a drug dealer at 4 in the morning on Sept. 18, 1996, they got dead air when they tried to call for backup on their new handheld radios.

As they cornered the suspect, he shot them both. Blehm -- lying in the street, blood gushing from his shattered right leg -- tried calling again.

Again nothing.

Finally, McCollum, shot in the chest but still able to move, stumbled up the street until he found a clear signal and summoned help.

The shooting victims were also victims of progress. The once-dependable police radio is literally being drowned out by a torrent of information-age services, such as wireless phones and instant messaging, that have made mobile communications available to millions of Americans. Even as police, fire and emergency medical services upgrade to pricey new radio systems, dozens of agencies -- including those in Seattle; Portland, Ore.; Denver; and Miami -- face increasing interference from more powerful commercial wireless services.

''This is a very big problem, and it's going to get worse'' as cellular's customer base grows, says Ron Haraseth of the Association of Public-Safety Communications Officials.

In Tigard, Ore., recently, police twice were unable to radio for backup while facing armed suspects because of cellphone interference. Part of the problem is the fact that Kansas City's police force and others, beset by tight budgets and poor planning, have been unable or unwilling to build sufficient infrastructure to support their new, but more terrain-sensitive systems. And many agencies simply find their new, feature-rich radios tougher to use and more prone to breakdown.

In the 1960s and 1970s, ''there weren't as many users, and systems were simpler,'' says Chuck Jackson of Motorola, the top maker of emergency-service radios. ''There was a microphone and a speaker, and you talked over it.''

Some officials blame the Federal Communications Commission, which supervises the airwaves, for not doing more to head off the current traffic jam. And experts say the FCC's plan to divvy up a new band of radio spectrum -- ostensibly to fix the problems -- may just replicate current congestion.

FCC critics, moreover, say that the agency, under pressure to wring as many billions of dollars as possible from auctioning airwaves to commercial carriers, gives second-class consideration to public-safety agencies that get the spectrum for free. The FCC says it balances both interests.

However the blame is shared, the bottom line at street level is that the ongoing glitches have caused an untold number of close calls, at least a few injuries and may have contributed to the death of a police officer.

''It could mean life or death to police officers, firefighters and even citizens who are not able to get prompt emergency service,'' says Harlin McEwen, a retired police chief who handles telecommunications issues for the International Association of Chiefs of Police.

Public-safety radios traditionally worked in the relatively uncrowded 400-megahertz frequency band and lower. Interference was rare and came from taxis and other services on nearby channels, whose conversations were brief.

But as metro populations swelled, police, fire and medical agencies lacked enough channels to handle growth in their own ranks. The sprawl also complicated another concern: Departments typically cannot communicate by radio with neighboring agencies whose equipment works on different frequency bands. This still is a nationwide problem during major fires and other disasters involving multiple jurisdictions.

To fix both problems, a growing number of agencies across the USA the past decade have been upgrading to new equipment that works in the 800-megahertz band, which has more capacity and allows more features. And neighboring communities often move there in tandem, so they can communicate with each other.

Fix breeds new problems

But that slice of spectrum is the same space occupied by the exploding wireless industry. And it brings its own headaches:

* Wireless interference. Much of the commercial interference with public-safety radios comes from cellphones. And, for historical reasons, the cellphone company causing the most problems is Nextel Communications.

Until recent years, Nextel operated a mobile radio service for taxis, truckers and others. In the 1970s, the FCC interlaced Nextel's channels with those of other mobile radio services, including public safety. It did so because it thought each organization's channels were more vulnerable to interference from its other channels than from someone else's channels.

It's not clear whether this belief was correct -- the FCC had few resources for testing back then. But the legacy is that in each market, dozens of police and fire channels abut Nextel channels. For years, the layout caused few problems because both Nextel and public-safety agencies used a radio system design: a handful of towers on hilltops beaming wide-area signals.

Cellphones create coverage gaps

But in the mid-1990s, Nextel morphed into a national cellular phone company, which required it to dot cities with dozens more towers. The result is that its transmissions now can overwhelm relatively weak public-safety systems on nearby channels and create coverage gaps that can reach a mile, especially near cell towers.

Other wireless phone providers, such as AT&T and Cingular Wireless, also cause interference. But because their channels were granted in separate blocks, they wreak havoc only where they meet public safety's block. ''In almost every region of the country we're hearing complaints,'' says Mike Hunter, president of engineering firm RCC Consultants.

In Anne Arundel County, Md., police officers are plagued by eight ''dead spots'' where Nextel and Cingular have towers. The problem came to a head last year when an officer stopped a speeding car and could not reach dispatch. As he wrote out a ticket, another officer stopped to warn him that the driver was a shooting suspect.

''It was getting to where officers, who are pretty courageous, were starting to get very uncomfortable,'' says Anne Arundel Police Chief P. Thomas Shanahan. The county recently agreed to buy a new $15 million radio system.

In Phoenix, Nextel transmitters hamper the police radio data system, which does background checks during traffic stops. ''Certainly people guilty of crimes have been let go because the officer couldn't get through,'' says radio manager Melvin Weimeister.

In Portland, Ore., Nextel's system -- which has 80 towers in the area vs. the county's 14 -- ''is like the biker gang that moved next door, banging and raising hell,'' says Joel Harrington, who handles city communications there. Officials are considering a more robust $50 million radio network, he says.

Most of the time, the interference means hassles rather than disaster: Officers must travel farther to get a signal, carry cellphones and bring backup when entering static-prone areas. And Nextel, officials say, has been a good neighbor, agreeing to switch channels, reduce transmitter power and sometimes even move towers.

''We take reports of interference with public safety very seriously,'' says Larry Kervor, Nextel's vice president of government affairs. But the company, he says, is ''fully in compliance with the FCC.''

The FCC, in turn, says that years ago it simply did not anticipate Nextel's cellular service.

Remedial measures are of limited value, says Tom Eckels, an engineer with consultancy Hatfield & Dawson. A long-term solution would be to move Nextel and public-safety channels into separate blocks. But it would take huge sums to reprogram equipment. Many towns couldn't afford it.

Portland and other cities are considering moving to the 700-megahertz band to be vacated by UHF television stations as they switch to digital broadcasting. But radio equipment for that band won't be ready until mid-2002.

And some experts contend that the FCC's new plan for that band will make it just as crowded. The agency first designed the 700 band with public safety in its own block and more space between that block and other wireless carriers. But the FCC revised the plan last year, and critics say it now allows carriers to operate powerful transmission towers in channels that are too close to public safety.

''It's a significant concern,'' says Steve Sharkey of Motorola, which asked the FCC to reconsider. The FCC turned it down, saying interference should not be a problem.

McEwen of the police chiefs group charges, ''The FCC changed the rules to get more money from auctions, but they're putting public safety at risk.''

Tom Sugrue, chief of the FCC's wireless bureau, replies, ''That's just wrong.'' He notes that ''radio spectrum is a limited resource that everyone wants'' and that the FCC must balance competing needs.

* Need for more towers. Although radio signals in the 800-megahertz band are clearer, they typically don't dance around hills, trees and buildings as deftly as their predecessors. They also have more trouble penetrating big new, reflective-glass buildings.

The solution is to build a bigger network. But budget-conscious cities often don't realize or want to accept that upgrading to 800 megahertz requires adding many more towers than their older systems needed, RCC's Hunter says.

In Kansas City, officials decided: ''This is how much we want to spend, and this'll do,'' says Bob Lawrey, communications manager for city police.

The city recently had to enhance its new 800-megahertz, $18 million system with $10 million worth of additional antennas.

''I was pretty upset that they expected us to do this job, and they gave us substandard equipment,'' says Blehm, 29, the wounded officer who has settled a lawsuit against his assailant, the city, the city's radio consultant (SFA) and the maker of the radios (Ericcson).

Assistant City Manager Rich Noll said officials thought the original network would be sufficient.

Orange County, Calif., installed an $80 million radio system last year. But the system design did not adequately account for the area's maze of malls, apartments and offices.

Recently, as a SWAT team searched for a suspect in an Irvine office building, Orange County officers could not radio colleagues outside to let them know the team was coming through the door. The county is now debating more antennas.

In Delaware, firefighters often resort to blaring sirens to let colleagues know that a blaze is spreading or a floor is caving in. That's because Delaware's new $52 million, statewide radio system doesn't work in five communities, including tourist hotbed Rehoboth Beach, or in large buildings. Motorola has agreed to add signal boosters at no cost, and the state will spend $10 million to improve performance inside buildings.

Police officer shot to death

Problems turned tragic in Atlanta. In 1997, as two officers responded to a domestic dispute, the man became aggressive. Officer Patricia Cocciolone says she tried to call for help, but her radio didn't work. The man emerged with a rifle and critically injured Cocciolone. He killed her partner, John Sowa.

Chip Warren, vice president of the police union, says the city has balked at spending to add antennas to its $39 million, 6-year-old system. ''This is putting troops' lives in danger.''

Atlanta Police Maj. Bill Gordon says the problem is not widespread and says Cocciolone's radio worked, contrary to her testimony and media reports.

Experts also note that every radio system has dead spots: buildings, low spots and other nooks where signals will not reach. Says Eckels of Hatfield & Dawson: ''Nobody ever can afford to build the perfect radio system.''

* More complicated equipment. New 800-megahertz radios sport fancy features, such as emergency buttons to alert dispatchers to trouble and automatic scanning for an open channel.

But some officers have had trouble using them. Before, they searched for open channels themselves, listening to colleagues' conversations as they scanned. Now, if the airwaves are busy, they hear a beep and must wait for a channel. ''We've had officers frustrated during a shooting because they get a tone,'' says Portland Assistant Police Chief Bruce Prunk.

A Kansas City dispatcher, bewildered by a new 60-channel radio, responded on the wrong channel to firefighters calling for hoses, forcing them to jump out a first-floor window to escape a blaze.

Though time and training should ease many of these concerns, the feature-packed new radio systems are also more glitch-prone.

''The systems are full of controllers and microprocessors and software,'' Hunter says. ''There's a lot more to go wrong.''

618. Bug Frequency Monitoring?

Newsgroup: rec.radio.scanner
Date: 2001-03-13 18:31:36 UTC
From: headshope@aol.comm.htspm

Got a question for readers,

Anyone make a point to search bugging frequencies?

Just the other night we were playing with WBFM to catch some SCA activity, and around the 89 MHz area we were hearing what could only be described as a bug from the content heard, either they were unaware of its placement or just did not care, or possibly forgot. Only question we kicked around was that most kits are battery powered and would require a resupply of power fairly frequently.

I remember Radio Shack was selling those Do-it-yourself wireless FM kits and until recently we ignored those frequencies. Now I have seen a few actives across the board; from the mentioned 89 to 140 MHz.

Not quite sure of the reason for employment; could be a room monitor situation but could also be an unauthorized placement.

Anyone out there make a point when mobile or otherwise to snoop the snoop frequencies?

We have a link to TSCM which has a listing of common frequencies used at http://www.expage.com/pbscanner2 , as reference.

If you have a 40ch sideband CB radio made by Tram, Cobra, Browning, Uniden, President, etc. I would be interested in purchasing it. Working condition is not important as long as it is cosmetically good. Get rid of that dust collector that you are never going to use. Payment by money order, no complicated nonsense here. Let me know what you have. Thanks. Email Wasupdare@aol.com

Government agencies are OUR agencies and they represent us.
We have a right to monitor their activities as a part of their representing us and our wishes.
They work for us, not the other way around. Well in an ideal world that is.
In reality they consider the whole nation works for them, the elite goverment employees.

The only time everyone in town would know where you are going is if you get pulled over by the police
and was caught for a crime.
I think we all have a right to the personnal issues reguarding criminals. They apparently have no problem
committing crimes against us which can be very personnal, like breaking into people's houses, rape or murder.
Even if you get a speeding ticket and you have warrants for crimes, we should have the right to know exactly
what kind of joker you are for not only being dangerous with your own life but possibly jeopardizing ours or our
security.

> Government agencies are OUR agencies and they represent us.

Yes, we've given them the authority to act in the best interests of
our society, as delineated by the legislative branch and enterpreted by
the judicial branch.

> We have a right to monitor their activities as a part of their representing us and our wishes.

By all means, please mad a dash for the Oval Office, so you can
fulfill your right & duty to
be privy to any & all government operations. If mommy won't drop you
off at the White House, you
can try to the nearest FBI Field Office or Resident Agency.

> They work for us, not the other way around. Well in an ideal world that is.
> In reality they consider the whole nation works for them, the elite goverment employees.

You do have the right to be the anonymous idiot that you are.

> Government agencies are OUR agencies and they represent us.

Yes sir, you are right there.

> We have a right to monitor their activities as a part of their
representing us and our wishes.

Why do you assume this is a right? Where is this right you speak of? Where
does it say you have the right to eavesdrop on an ongoing investigation?

> They work for us, not the other way around. Well in an ideal world that
is.

Actually they represent you not work for you. You can't hire and fire them
you can only elect them. BIG difference.

> In reality they consider the whole nation works for them, the elite
goverment employees.

No in reality the electorate gives them their power and can take it away
through voting. BTW who is "they"? Do you feel it is so somple that "they"
are all the same due to being a government employee?

After decades of experiencing "dead zones", garbled
transmissions and static, it would have been wonderful to have had
digital communications when I was on active duty.
I don't see what all the fuss is. Radios capable of
decyphering the transmissions will be available from the police
department, according to the article.

Here is a link to a site that has lots of information about these types of radios, and accessories you'll use with them:

http://www.strongsignals.net/

After looking over the information there, I decided to buy a Yupiteru MVT-7100 as it's reputed to be about the best for HF. Other than HF performance, the MVT-9100 has nicer features.

In any case, for me, it was a good choice.

They aren't available in the states, but it's easy enough to order one from overseas.
The 7100 costs around $300 from Bandercom or Javiation. I like the Javiation's leather case much better than the plastic one Yupiteru makes. Both firms seem to be fast and reliable.

Good luck

Mark

> Regards,

You didn't miss much. Here in LA, digital hasn't really lived up to it's promise. That's evident by the number of dual signal phones that are now on the market. They work with both digital and analog, so at least sometimes you can actually use the damn thing. PCS was just pathetic.

It seems that digital works great when you get a solid signal, just like analog. But when your surrounded by large buildings, hills, or a lot of electronics, you can lose just a tiny portion of the signal. With analog, you hear hissing and static. With digital, you don't hear squat, or the sound breaks in and out, so you lose half the conversation.

Hello All,
I have a Bearcat 250 scanner that has a bad EXAR NC57902 in it, leaving a blank display with a decimal point on the right hand side of the display. I understand that the chip is no longer manufactured and its function is to supply plus or minus voltages over 20 volts to other circuits. Question is, has anyone come up with an equivalent discrete circuit or have a more specific description of the chips function? Any help would be greatly appreciated.

Jim Halbert

Pro 2042 Modified
With baseband out / and "RF in" out connecters "2 rca connecter on back"
comes with Manual/Antenna
Excellent condition
$210 shipping included.

Pro 51 Modified
I took this receiver apart and tweaked it so on the outside it looks
totally stock But when you plugin a headphone jack its baseband
audio!!!! now you can decode all your baseband audio.
Comes with antenna/No manual sorry, its in excellent condition for
how old it is
RECEIVES CELL PHONE ON THE 900 Mhz band
$100.00 + Shipping OBO,

DX-394
im not sure i want to sell this, its a good reciever and all but if you
make me a good offer i will highly consider it thankyou..
would comewith Antenna/Manual
Excellent condition..

That's impossible. Nothing can be as bad as ch19. But then again I drive a
truck into NYC each day.

Two meter repeaters are not representative of most hams - especially in any
major city. Try working some two meter SSB, or better yet, spend some time
on HF. You will find a completely different type of operator.

Timmy, don't be so darn rude. Just because someone chooses to use an alias doesn't indicate they
are an idiot.

Speaking of idiots, before you toss a slurs, clean up your spelling and diction.

As for the subject at hand, I have always welcomed the public to listen to our frequencies. At
times they see much more then we LEO's do.

Not all of the public are ambulance chasers, just 1%. The rest are lawyers.

Have a positive day.

Pappy
Retired 30 year LEO

```
:
: After decades of experiencing "dead zones", garbled
: transmissions and static, it would have been wonderful to have had
: digital communications when I was on active duty.
: I don't see what all the fuss is. Radios capable of
: decyphering the transmissions will be available from the police
: department, according to the article.
: Regards,
: Ken (NY)
```

Most of the APCO 25 digital will not be encrypted. And
the only real limit is whether the department is willing to
put out the money to have enough towers and repeaters
to cover all the dead zones.

The problem with encrypted radios is that the first thing
that will happen is that a group of LEOs will have the
techs create a couple of talk groups that the bosses do not
know about. Since it is encrypted, not even the bosses
will be able to listen.

The other problem is that it immediately cuts everyone
off from everyone else. With analog or unencrypted digital
trunking systems (and that is all these are, trunking systems
with digital modulation), every officer or fire fighter can buy
a scanner to listen to other patrol areas or services. With
encrypted radios, no one can listen so if the bosses do not
put the talk group in the radio, you are screwed.

And the media is going to bitch about having to spend $4000
a radio just to listen. (no $400 scanners). Plus how often will
the bosses lock the medias radio out?

: This is an underhanded push to subsidise a national digital network where
government, state and county and communicate
: without its citizens being able to monitor their activity.

Most of the APCO 25 digital will not be encrypted. And
the only real limit is whether the department is willing to
put out the money to have enough towers and repeaters
to cover all the dead zones.

The problem with encrypted radios is that the first thing
that will happen is that a group of LEOs will have the
techs create a couple of talk groups that the bosses do not
know about. Since it is encrypted, not even the bosses
will be able to listen.

The other problem is that it immediately cuts everyone
off from everyone else. With analog or unencrypted digital
trunking systems (and that is all these are, trunking systems
with digital modulation), every officer or fire fighter can buy
a scanner to listen to other patrol areas or services. With
encrypted radios, no one can listen so if the bosses do not
put the talk group in the radio, you are screwed.

And the media is going to bitch about having to spend $4000
a radio just to listen. (no $400 scanners). Plus how often will
the bosses lock the medias radio out?

: > WASHINGTON -- Many public-safety agencies around the country cannot
: > communicate on their radios with agencies in neighboring jurisdictions
: > because they use incompatible equipment -- a gap that could lead to
tragedy.

What kind of charger are you looking for? Fast automatic charger or simple slow charger? Are you looking for a schematic to save money or are you wanting to build a more elaborate charger? Let me know, I've been working on a charger design and have bookmarked a lot of battery charger information. You can use a resistor with a wall wart or use a battery charger IC that will fast charge, peak detect and switch to a trickle charge. I also know of many ready made chargers for 4.8v batteries for low cost. Let me know and I'll get you more information.

>
>I've never been happy about unsecured radios. If I want everybody in town
>to know where I'm going, I'll use the PA.
>
>Pagan
>
As you make clear in a follow up to this trhead you are a LEO.
As might frequent post have made clear I am not much of a fan of law
enforcement. Either agencies of cops.
I have monitored police comms fro over 35 years. I have heard many crimes.
Being plotted by cops. Secure or not the public has no idea just how crooked
their guardians are.
LA's Rampart is just the tip of a sad iceburg.
Look at NY, New Orleans. The police are not our friends. They are our masters
afgents and our keepers. The hwole issue of secure vs open is pointless.
A lot of cops carry cell phones and use them to escape monitoring (or so they
think) by the public, thier bosses, the "media".
Disagree if you wish. But years of monitoring, local, state and feds
have shown that they are not the least concerned with lwas and justice, just
how much wieght they can throw around. I heard the police in Lexington Ky plot
and execute the murder of a sad, senile old man (Fred Featherstone).
No one cared. The media heard it all and reported nothing.
If you are honest, do good, refuse to abuse your position great, but you are
rare. And if you know which officers in your force do not follow the rules,
but you refuse to stop, report and testify against them then you are as guilty
as them. By not stoping your brother bullies in blue, you share their full
guilt.
I am just happy that all too few cops understand just how easy it is to
intercept cell calls, and that a lot are really so smart that they think "talk
groups" on a trunked analog (GE) system are "scrambled". IT was fun listening
to them make dope deals, call their girlfriends (or in one case a male lt
called his boy friend) all the time thinking they where scrambled.
Oh and just keep thinking that PCS and "scambled" are secure.
I should have made tapes or put it all on the web. Great fun!
If you are clean and decent then you have my respect, if, as is much more
likley, then you have my "thanks" for helping to ruin a great country.

656. They're putting a Cell Tower/Antenna on my building.

Hi,

I just heard from the super of My building,
that the owners of this building where I live are
having a Cell Tower/Antenna put on top of the
building.

Now the question is how is this going to effect
the reception of My (PRO-51)scanner? I already have trouble with Cell Phones
over-ridding the POLICE frequencies. Maybe it's a
good thing I don't have an out-door antenna?.

Please reply with any info that can help.
send reply to lbeecroft8041@home.com

Thank-You
P.S. I'm on the North side of the building, and
I have no ideal of where the antenna will be in
relation to my apartment.

Sure you will, W6DKN. Have you been to 3.860 MHz lately? The two-meter operators are not any better or worse than any other ham. I take that back, at least the two-meter operators don't usually go around promoting bigotry towards their fellow hams.

Screw the media. They have ceased being whatever "watchdogs of freedom" they once were. Now everything is about hype and sensationalism and getting the most carnage on the nightly news to boost ratings. You're very naive if you really think the media's complaints regarding encrypted radios stems from feelings of some patriotic duty to protect the republic from its own government. The real source of their complaint is that without police radios to listen to, they won't be able to make it to the scene of a four-car pile-up in time to capture the blood and gore on camera before it's cleaned up by the cops.

I'm glad you said that, because our equipement sucks. The vehicles are old, the front ends shake, most pull to the right, and they're dirty.

Also, our cell phones are shit, our station needs paint and repairs, a new control room, and while we're on the subject, we DO need better radios, with lots and lots of repeaters. Remember, we work nationwide. And what's with that useless, single ply toilet paper?

As a matter of fact, I've bought my own cell phone, shank resistant gloves, leather gear, handi-wipes, and just about every other expendable supply I use.

Plus, you have promised me and my fellow officers a raise, which has been denied by Clinton for the past 8 years. Make sure to include all the back pay and interest when you make out that check...make that money order. I don't take checks.

And about those encrypted radios; should I get ambushed, or the media and/or curious onlookers interfere with my job and cause further injury or death because YOU decided I didn't need encryption, expect a team of lawyers to tear your financial ass into little bitty pieces.

Frankly, sir, your not doing a very good job. I'll expect better in the future.

Mail that check Priority.

I very rarely use the radio. I also don't deal with personal crap on duty. What I don't like is, if I have to read a suspect's name or file number to dispatch, their info is thrown all over the place. By the same token, I'm none too please when some rookie babbles my name and location all over the airwaves.

So, if you know where the jerks are, why waste your time there? At least they occupy a small, known piece of the band so the trash is easy to avoid - unless you're the type that likes this stuff. (Yes, I have heard about the crap on 3.860, but I have no desire to waste my time with it)

Personally I prefer to work DX and do very little stateside work (which seems to be where most of the problem operators are on HF). I work 12, 17, 20, and 40 almost every day and I have never had anything but great QSO's. I do work VHF/UHF also, but I only do SSB or FM simplex and SATS. There are very few "garbage operators" in these modes.

At least on HF, the jerks stay in a small, relatively consistent spot and it is fairly common knowledge where they are, so they are very easy to avoid. Very different than the VHF repeaters in the big cities, where the jerks get their kicks from going from machine to machine to see what trouble they can cause (just like 11 meters).

That thought had not eluded me, however the gauge remains pegged when the
ignition is switched off and thus power is removed from the instrumentation.

Thank you for you response.

The point is that the 2-meter versus HF operator nonsense you mentioned earlier has absolutely nothing to do with it - the "jerks" are the same on both (the only difference between 2-meters and HF is the limited number of repeaters on 2-meters - harder to avoid the "jerks" if you stay mainly on the repeaters).

Therefore, you should not have said earlier that the "two meter repeaters are not representative of most hams" (you said "hams" here) and that he should "spend some time on HF" because he "will find a completely different type of operator." That is not true. There are no more "jerks" on 2 meters than on HF - they're only a little more difficult to avoid because of the limited number of repeaters.

If the "jerks" really disturb you, then I agree with your suggestion - simply avoid the repeaters. Its far easier to avoid them on the SSB frequencies (just like on HF).

Take care, W6DKN.

Lets take a survey of the number of jerks and lids out of 1000 QSO's on the
2 meter repeaters in Los Angeles, and do the same with 1000 HF QSO's on 17
meters. If you are correct, the ratios should be about the same...

It has certainly been my experience over the last several years in/around the Los Angeles area of So CA. Maybe in your area things are different. But, like most people, we base our opinions on our personal experiences.

And let's not forget that my original response was to a post stating that from listening to 2 meters, the poster concluded that ham radio in general was just like 11 meters.

> If the "jerks" really disturb you, then I agree with your suggestion -
> simply avoid the repeaters. Its far easier to avoid them on the SSB

They don't disturb me - in fact they have no effect on me one way or the other - because I choose not to pay any attention to them.

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

I do have members that live in such places as Oregon and New York. So, the part about living in central California is not set in stone.

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

--

There are too many to list, best thing is to search between 169 and 216MHz VHF and 512 to 806MHz UHF. Sony Radio Mics us frequencies in the 900mhz band.

I am a scanner newbie with a BC780XLT... I ran across some
interesting Sat Frequencies and this peeked my interest...
one for the Soviet Manned Space station is 30.0080.

However, it does not appear that my Step options will
allow this frequency to be programmed into my BC780XLT?

What is a good receiver for Satellite reception. Is it really
possible with normal scanners? Do you need outdoor
antennas?

Thanks...

That would be unused, since no one is on the station even if it was used you wouldn't hear anything ;>

Source record: 68620

If you go to the FCC's website and look up the license for the carrier thats going to install the cellsite you will see that they really don't put out that much power. Also the beam pattern of the antenna array keeps most of the energy about 2° below the horizon at best...a lot of them are at the horizon. At 800/900 Mhz and especially at 1.9Ghz the power drop off in free space is rapid..in other words I think your worried about nothing.
As far as interferance, if your receiver is halfway decent you wont notice much in the way of interferance. In a AMPS/NAMPS system the calling or polling channel is 880.030Mhz. If you hear raspy data this is where it will be coming from....Eddie

Hello, Bill.
I bought my VR-500 last May, but haven't spent a lot of time working with it. I like it very much. It seems to be very sensitive in 225-400 where I need it to be.
It is, however, deaf when used with the stock antenna. I bought mine with a telescoping whip and that's all, besides a rooftop antenna, that I'll use with it.
I recently bought the cloning software and it works very well. It's a Windows program, and very utility in nature. No frills, but it works well.
Mike

I very seriously doubt you have cell phones overloading your
scanner. Maybe a high powered pager transmitter but not
cell phones. Even a high powered cell base station shouldn't
be causing any problem.

Hey forget about your scanner and its reception man, think about your
health.
If they put up a cellphone tower right above you, the fillings in your
teeth may pick up the police for you.....
A small dose of 900 mHz wont hurt you..... A small dose of 900 mHz over a
long period of time, probably will.
How are you going to prove it when a foot starts growing out of the side of
your head? Their experts can come up with a lot more facts and figures that
you ever will.
If you can,,, try to stop it....
Just my opinion.

692. FS: PRO-2006 with full OS456 and Probe 6.0 Software

Newsgroup: rec.radio.scanner
Date: 2001-03-14 20:32:36 UTC
From: "Gary Stocking Jr." <hNoOpShPeAaMd@snet.net>

For Sale Realistic PRO-2006 Scanner, with Full Optoelectronics OS456 board installed and the latest version of Probe version 6.0 scanning software. This radio is mint, without a scratch, bright LED. Have box, screw in antenna, OS456 cable and all manuals. $600 which includes insured shipping to continental US. You will not be disappointed with this package! Check out the link below to see a picture, I also have closeups of the front and back available. Radio is the version with the Light switch for the LED to turn it on and off. Has been off since I've owned it as the radio is always under computer control. Thanks!

Hi
I'm not sure if the reset is the same on all pro scanners.but try this,
switch off
press and hold the 2 and 9 button (keep pressing) and switch on scanner.
this might work. Failing that and if there is no reset button, take out all
batteries etc disconnect all power and leave for 24 hours and then try it.
regards
S.J

D E C A T U R, Ga. Call it a quality of life crime.

Unlicensed vendors hawking their wares outside legitimate businesses, pestering passersby, playing on their sympathies to sucker them into shelling out money for things they don't really want or need.

The Dekalb County, Ga., police cracked down on the offenders and rounded up a gang of ï¿½ Girl Scouts selling Thin Mints and Tagalongs in the parking lots of local shopping centers.

The 8-year-olds were in violation of an ordinance against selling goods without a permit, and faced fines of at least $100.

Officials say the ordinance was put in place to spare people the nuisance of dealing with unlicensed vendors, and it turns out that Girl Scouts selling cookies fell under that category.

After the police department was flooded with complaints about the penalties, the tickets were voided, and a police major admitted the officer who handed out the tickets was a bit overzealous.

> the bosses lock the medias radio out?

As "open" traffic diminishes, the media will scrutinize more
and more mundane traffic.

After a while, they will learn that *ANY* transmission has the
potential to be politically embarassing at some later date.

The logical end will be the police chiefs setting policies to
work in encrypted mode at all times, unless specifically told

by the dispatcher to go into the clear....after a couple mistakes
by dispatchers, the dispatchers will then have to get an OK from
the shift supervisor before putting a channel in the clear.

Thus, we will have a police force operating with minimal
public scrutiny....

Heaven help us.

If you have a keyboard with actual physical buttons that move in and out
when pushed and released, check that one isn't stuck in the "in" position.
I've had this happen on an old PRO-2002, and I thought for days that the
scanner was gone, until I realized that the particular button wasn't
releasing.
Dirt had built up around the button, keeping it from moving in & out
smoothly.

Also, if it has the "soft-touch" keys that are beneath a membrane, the
membrane may have been forced in and "dented", for lack of a better
word, holding the key in. I had something fall against the keyboard of a
PRO-2004, and it dented the stiff membrane of the keyboard, causing a
lockup until I took an exacto-knife and carefully cut around the perimeter
of the membrane on three sides, lifted it, and re-shaped it so it didn't
press
against the button underneath. I sealed it again with a little crazy glue,
being
careful to keep it away from the center so as to not get any on the button
underneath. THAT'LL keep the button in for a while!

Source record: 68526

I'm no advocate of RF pollution in any form, but I do like to put things into perspective. The inverse square law says that as RF doubles in distance from the source, the intensity will decrease by a factor of 4. So unless you are sitting in front of the cell base antenna, only micro watts of RF energy will enter your head. Then there is the debate as to how much of the energy will enter your head.

I like to make this comparision. It takes 5 -10 minutes to heat up a bowl of spaghetti in a microwave oven. That's 2.5GHz of RF energy at an average of 650watts. Then you always find the middle is still cold!!. Now how much penetration into your brain would there be if a few micro watts of RF energy at 800 - 900MHz were bombarding it, taking into account the calcium in the 1/4 inch of skull surrounding it?? NOT MUCH!!!

As for the radio problems you will encounter, antenna placement will help rid of any interference.

Mike

If your agency or department uses crappy or worn-out equipment, why
stay? Pensions are portable now, aren't they? What is your union
doing about working conditions? Why are you paying them dues if they
aren't fighting for you? And as someone else pointed out, since you
are your own boss too, why aren't you doing something about it?
Pensions, I'll never retire after 20 or 25 years with 2/3'ds pay and
3/4's medical benefits or after 30 with 3/4's pay and full benefits.
Also, to get back to the topic of comms, isn't everything you say or
do on duty a matter of public record? I can understand the use of
secure comms for certain types of operations, but for patrol or
traffic duty? Most shit'ems and assholes can't figure out how to make
an honest living, never mind figure out a scanner or talk groups in a
trunked system. The bad guys who can probably won't come to the
attention of the officer on the street. Don't let this make you think
I am hostile to the job or the people who do it. I just think that
the entire system needs to be audited and open to public scrutiny.
This goes double for the politicians, who also work for all of us, and
need to be reminded of that fact.
Ken, you're not my friend, Captain Cully, are you?

Russ

places like michigan already have pretty secure scanner laws. i've lived in iowa and idaho now, we can go anywhere mobile with a scanner. go to michigan and try to drive with a scanner even in the trunck. you could be guests of the state of michigan just for having a scanner. popular communications had an article on that earlier this year. don

They sure are. I am retired. :-)

>aren't fighting for you?

The police union (PBA) is doing something about it. They are complaining as they have for the last thirty years or so. And if nothing is done by you people, they will complain more. In fact, that is precisely what I am doing now.
Police Officers as you are aware, are not allowed to strike or conduct job actions. If they do so, they suffer the penalty of dismissal. (NYS Taylor Law)

>And as someone else pointed out, since you
>are your own boss too, why aren't you doing something about it?

I never said I was a boss, you did when you wrote:
"Remember for whom you work. We pay your salary. WE OWN every piece of equipment you use or touch. We should be the ones to decide if your comms are encrypted."
So you are also responsible for improving the shoddy equipment the police have to use - including your lousy radios.

>Pensions, I'll never retire after 20 or 25 years with 2/3'ds pay and
>3/4's medical benefits or after 30 with 3/4's pay and full benefits.

Neither will police officers, at least here in New York State. It's 20 years with half pay here. And the medical benefits are the results of collective bargaining.

>Also, to get back to the topic of comms, isn't everything you say or

Yes, everything spoken or digitally transmitted is saved on
tape to be used for supervision as well as evidence in any court. Our
radios include programmed buttons for things like requests for
personal, request ambulance, request for assistance, officer needs
help, etc. There is no way of "hearing" these transmissions but they
are recorded somehow at communications. Use of verbal profanities is
cause for loss of pay so cops are very careful what they say.
In 34 years of police work, I got my only R&R conviction for
"innapropriate communication". I was assigned to an aided job two
precincts away from my own on a busy Friday evening in a one-man car.
When I requested directions to the location, before CB could respond
another operator in RMP ___ said, "It's east, Kenny." Which was a
flippant remark. My equally flippant response was "So's France." Of
course a two-star chief heard my response but not the other cop's and
directed a Sergeant to write me up. When I got called in, I was shown
a transcript of the tape and had to sign the "bitch book" which
details minor offenses and was fined four non-paid work hours to be
served after my regular tour. If I had used a profanity, I would have
been really ripped, probably two days pay or more.

>Ken, you're not my friend, Captain Cully, are you?
>

I've seen one department, just one, in this area (Los Angeles and Orange County) which has good equipment. It wasn't Beverly Hills either, although their stuff isn't bad.

In the last few years, I personally have spent about $3,000 on supplies, equipment, and other stuff strictly for use on the job. That's because I buy good stuff real cheap. Brand new, this stuff would have cost about $8,000.

This wasn't a bunch of fancy toys, either. Things like a voice recorder, to keep the liability low, and a small GPS capable computer for navagation when I travel, cell phone, and a host of other stuff that saves me time and saves YOU, the taxpayer, much money.

I just got my replacement baton. It's some kind of cheap imitation of the ASP expandable baton. Looks like crap, feels like crap, and it probably saved my agency $3...You know, lowest bidder. I'll use it for training, and buy a real ASP that'll cost about $70, and I won't have to worry about it falling apart or not opening when I really need it. This doesn't even faze me, although I sure had much better plans for that money. ;-)

> Pensions are portable now, aren't they? What is your union
> doing about working conditions? Why are you paying them dues if they
> aren't fighting for you?

Unions in jobs like these, police, firefighter, can, when working conditions are poor or when we are getting screwed in some other way, file paperwork. That's it. Type out a memo, place it on a desk. If it doesn't get fixed right away, they can...type out a longer memo, place it on a desk. If absolutely nothing gets done, reprisals take place, people get fired...well, type out a really long memo...

Can't go on strike. That's really the only teeth a union has. So no, there isn't much the union can do for us.

> And as someone else pointed out, since you
> are your own boss too, why aren't you doing something about it?

I don't know who pointed that out, but they were mistaken.

> Pensions, I'll never retire after 20 or 25 years with 2/3'ds pay and
> 3/4's medical benefits or after 30 with 3/4's pay and full benefits.

You also probably won't retire with bad feet, back, and whatever else gets beat up, shot or stabbed while chasing bad guys.

> Also, to get back to the topic of comms, isn't everything you say or
> do on duty a matter of public record?

No.

> I can understand the use of
> secure comms for certain types of operations, but for patrol or
> traffic duty?

If you get pulled over, do you want all your personal info going out to every kid with a cheap scanner? If your daughter gets hurt, do you want her personal info going out all over?

If a cop gets hurt or killed due to an ambush or the bad guys know they're about to be raided, do you want to pay his life insurance and possibly lawsuit settlement, plus the cost of recruiting, investigating, hiring, and training, both at the academy and OJT, of a new police officer to replace him or her? If memory serves, it cost about $15,000 to get little old me on the job, before training. That's about middle of the road for a federal officer.

> Most shit'ems and assholes can't figure out how to make
> an honest living, never mind figure out a scanner or talk groups in a
> trunked system. The bad guys who can probably won't come to the
> attention of the officer on the street. Don't let this make you think

> the entire system needs to be audited and open to public scrutiny.
> This goes double for the politicians, who also work for all of us, and
> need to be reminded of that fact.

I don't have a problem with the public seeing and hearing what I do and how I do it, as long as:

It doesn't create a danger to me, my partners, or the public.

It doesn't violate privacy, either mine or the public's.

It doesn't interfere with my job.

That's about it. Short list, not unreasonable, and pretty much applies to anything else in law enforcement.

Unsecure communications have all the above faults. While it may be in the public interest to be able to monitor what we say, that interest wouldn't be served unless ALL three conditions above are met first. Our first job is to catch and keep bad guys, not put on a "show" for taxpayers.

There are other ways to see what police do. Aside from actually watching them, which is pretty easy as they stand out like sore thumbs, you can go on a ride along, tour local jails and prisons, and just flat out ask "What do

you do all day?"

If you stick around in this newsgroup, you'll get some insight you won't find by asking a cop on the street. As some officers here are retired, and others, like me, use an alias, we can speak more freely, without worrying that anything we say will be thought of as to represent our department views and policies. In other words, you don't get politically correct happy speak, you get the down and dirty facts.

Pagan

Hello:
I have an AR 8000 with a problem with the mute in the squelch circuit. It seems the squelch works ok (e.g it starts and stops scanning with the presence of a signal) but it doesn't mute the receiver audio. I remember seeing a squelch mod for this radio some time ago and am wondering if a previous owner's attempt at this mod might be causing it. I'm ordering a service manual for the radio but it will take some time to get here. Does anyone have any info on this circuit? How about a scan or drawing of this part of the radio's schematic? Any info or help would be greatly appreciated.
Thanks
Jim

>disclosure of information gained by monitoring.

There frequently is personal information being sent over the air about rape and robbery victims. I don't think you really want that kind of stuff being monitored by pimply-faced kids using scanners, especially if the victims are family members. And of course disclosure of personal information regarding victims is illegal but isn't that what happens when someone listens in to those transmissions? There has to be a happy medium somewhere in all this.
Cheers,
Ken (NY)

You did a very fine job of bringing to light the many draw backs to 800 Mhz. trunking systems. One of the big problems with dead spots, that you started to point out is with Nextel. The Nextel sites are cause of problems to many public safety radio systems.

What is actually taking place is front end over load of the radio receiver. The newer portable and mobile radios that are being used in the public safety systems are part of the problem. The IF band width in them is not sharp enough to reject the strong off frequency signal from the Nextel tower site. Some of the older radios had a much better receiver in them and as such, the interference was not as noticeable.

If you start to do some checks on the radio system coverage, I think you will find that some of those holes are within a half mile or so radius of the Nextel tower location.

I have been told, that in most cases, the Nextel Rf engineering people will try to work the problems out. If you don't get a solution from the local people, try getting to the corporate office in New Jersey.

As long as the FCC allows the Public safety and the Nextel frequencies to be next to each other, these problems will continue. Maybe the move to the 700 spectrum might solve these problems. Only point to be made, is that it will do nothing to the multitude of existing systems in the 800 spectrum. All those systems would have to be changed out to get away from the Nextel problem. Not a very good move for the buck.

Maybe a better move would be to turn all the political power the public safety can muster and attack the problem in a different direction. Turn the political pressure on the FCC and congress. Most people forget that the FCC gets it directions and funding from the people in washington. Get these Washington paper pushers to start to understand the safety and finical problem that Nextel and the FCC have created.

And what caused the holes, was it a hole before Nextel put up there tower?

Everyone knows that public safety comes first, so I really doubt if the
local people would ignore you. Nextel has been know to keep cell sites
turned down that were proven to interfere with public safety. Most of these
were frequency related, and not technology related.
>

I just bought a Radio Shack Pro-92 scanner. I have tried to get several poilice department frequencies, but without success. most of the channels are 865.xxx-869.xxx however, there are some departments listed in the book that are just "944" or 457778. How do I enter those? When I try to enter it, it says "invalid frequency" Please, any help is appreciated.

Jay

I think you are entering the wrong sequence: see this page:

http://support.tandy.com/support_electronics/doc57/57987.htm

via: Tandy Online Manual Site at

http://support.tandy.com/support_electronics/57321.htm

Trunk Programing can be a Bear but once you get the hang of it....easy.

Hope this helps.

TC,

I was wondering how public service volunteers such as Civil Air Patrol fare in Michigan. I don't have a scanner in my vehicle, per se, BUT my ham rig (IC706MKIIG) has the capability of scanning if I want it to. I have read that hams are "exempt"(?) from this law, but I am not certain about it being that I don't live there.

Most of the states I read about that have scanner laws seem to be in the Northeast and Midwest. Down here (NC) we don't have scanner laws, and cops don't seem to mind if you have one in your car. Comms are plain dress voice. As a matter of fact, when you call the cops and tell them you are listening for their arrival on a scanner, they'll tell the officer that you are listening and will come out to meet them when they report on scene. I really don't understand why they are so uptight about the public listening to mobile scanners. Around here, if it is found that someone used a scanner to evade capture, it is then added to the list of charges, but merely listening is not illegal.

I once had an amusing incident last summer while cruising on Interstate 40 near Hickory, NC. I do have a small "antenna farm" on my car, and, while tooling along, I noticed what appeared to be a Sheriff's patrol car overtaking me from the rear quite rapidly. I wasn't speeding, but I noticed that the deputies slowed abuptly and paced me, seemingly observ-ing what they *might* have thought was a "suspicious" vehicle. But when they pulled alongside, I saw that the car was from INDIANA! What in the dickens was an Indiana Sheriff's deputy doing 600 miles out of his territory? Brother, were they ever giving me the evil eye! I was talking on my ham HF radio, and I nodded at them and held up my mike in a sort of greeting. Still got the evil eye, so I then gave them that stare kids often do when they open their eyes wider and kinda slump their heads as if to say, "WELL, what're YOU lookin' at?". OOOOO, did they ever want to stop me! But they had no jurisdiction, so, obviously pissed, they sped ahead where I hoped they would run into one of NC's finest in the black n' gray sedans who would present them with a present. I think it was the antennae that got their attention to begin with. Had I been in Indiana-and I have in the past, antennas and all without incident--I am sure I would've been trying to explain to them just what I was doin' with all 'them' radios!

Hello everyone I have a practically brand new Alinco DJx10t. This thing is awesom alpha numeric display, scans a wide area of frequencies except cell phones. I am willing to sell this on this great group before i put it up on ebay. Or I will make a trade. I am looking for a UHF mobile about 20 channels and can transmitt and receive in the 450-510mhz range Please email me back and I even have a couple pics of the Alinco. My e-mail address is Jimeckert@prodigy.net

Thanks all

Our 800 MHZ trunking system had the usual problems when it was being
installed and activated for the first times....but we have had very few
problems. I like it a lot better than our old analog system.

Hi all
I'm considering a new box.

I have a Yuppie MVT 7000 and a pro 44 but I like to use one box to search with and one to scan the found freqs with and as your problem well aware that's where the Pro 44 falls down so I feel its off to aviation scanning for that box.

So I'm in need of a no gaps hand healed covering AM WFM NFM at least more would be nice.

I must admit to being interested in the AOR 8200 series 2 but is it the best all round scanner ???

any help would be greatly appreciated.

RICK

739. Introduction to Scanning

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 | base/mobiles, the Uniden/Bearcat BC780XLT, BC895XLT, BC245XLT, SC200, and Radio Shack PRO-92 and PRO-94 | portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well. The ICOM IC-R2 and | Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated February 4, 2001

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Ralph Zancha, and ARRL for providing some of the information.

MARCH 2001

Mar 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Mar 4 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM.

Mar 11 (Sun): Tinley Park, IL - Giant Computer Show & Sale (see below). Tinley Park Convention Center, 185th St. & Harlem Ave. 9:30 AM - 3 PM.

March 25 (Sun): Grayslake, IL - Lake County Fairgrounds. North Shore Radio Club (formerly LAMARSFEST.) http://www.ns9rc.org. ALL INDOOR, Radio, Electronic and Computer Swapfest V.E. Testing 9AM to Noon, Door Prize Drawing Every Hour, Admission $6 at the gate / $5 in Advance. Door Open at 8 AM. Set-up at 6AM. Vendors may set up on Saturday 3/24/01 Set up hours to be determined, probably noon till finish. Free Parking. Cafeteria Open. Talk-in Simplex 146.52 & NS9RC Repeater 147.345 +.600. No sales of firearms or food products will be allowed.

APRIL 2001

Apr 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM.

Apr 1 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Apr 29 (Sun): Arthur, IL - Moultrie ARK. 8AM - 1PM. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937. Daytime phone 217-543-2178 evening 217-873-5287. Email: rzancha@one-eleven.net Or write to M.A.R.K., P.O. Box 91,

Lovington, Illinois, 61937.

MAY 2001

May 6 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

May 6 (Sun) - Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds (intersection of Suydam and Gletty roads). 8AM - 1PM. 3 indoor buildings. Admission $6.00. No VEC testing. Talk-in on 146.730/- or 146.520. Info: W9ICU at (815)895-3310, email w9icu@home.com. http://tbcnet.com/~jleonard/hamfest.htm (small to mid-sized hamfest. Nice drive in the country. Good restrooms. -AJ9S)

May 27 (Sun): Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell, Chicago, IL. 8 AM - 2 PM. setup at 6 AM. Indoor/outdoor flea market. Free parking. Tickets $5 at the door. Outdoor fleamarket space is free. Indoor table space is $1.50/ft. Info: George (773)545-3622 or Dean (708)331-7764 or write to CARC, PO BOX 410535, Chicago, IL 60641-0535.

JUNE 2001

Jun 3 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Jun 3 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: tel. 1-815-856-3773, (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 10 (Sun): Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. 2015 Manchester Rd (north of Roosevelt Rd, east of County Farm Rd). Gates open at 7 AM, buildings open to public at 8 AM. Admission $6. VE testing. Talk-in on 146.52 and 146.37/97 (107.2 Hz PL). Info: http://cyberconnect.com/orion/hamfest.htm or contact Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 708-442-4961 . Email: wa9rij@mc.net

JULY 2001

Jul 7 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Starts at 6 AM. Talk-in 146.52 MHz (WA9TXE). Info, call (414)762-3235.

Jul 8 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz repeater. http://www.w9az.com.

Admission $6. Info: Chip Moore, K9IOC, 289 S. Euclid Ave., Bradley, IL 60915. Email: karsfest@yahoo.com

Jul 15 (Sun): Washington, MO - Zero Beaters ARC Hamfest. Bernie E. Hillerman Park (Washington Fairgrounds) Free parking. Free admission. VE exams. Talk-in on 147.24 MHz repeater. Info: Keith Wilson K0ZH (636)629-2264, fax (636)629-1196. Bob Goza W0BOB (573)484-3718, w0bob@arrl.net. http://www.yhti.net/~w0bob/zbarc

Jul 22 (Sun): Sugar Grove, IL - Fox River Radio League Hamfest. Waubonsee Community College. Rt 47 at Harter Rd. Admission $5. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2001

Aug 5 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Aug 12 (Sun): Peotone, IL - 67th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $5.00 in advance with double stub, $6.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Robert Nelson, WB9FWR, 1720 Vollmer Rd., Flossmoor, IL 60422. (708)756-7984, email WB9FWR@aol.com. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 26 (Sun): Joliet, IL - Bolingbrook ARS Hamfest. Inwood Recreation Center, 3000 W. Jefferson St (Rt 52). Outdoor flea market setup at 6 AM. Admission $5. VE testing. Talk-in 147.33+ MHz and 224.54- MHz repeaters Info: Tom Ballard N9LJY, (630)739-3740. (Small to midsize hamfest with good restroom facilities - AJ9S)

SEPTEMBER 2001

Sep 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Sep 22 & 23 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Admission $8, good both days. Ladies program - Arts and crafts. Grounds open Thursday at noon. Flea Market open both days at 6 AM. Exhibit buildings open Sat 8 AM - 4 PM and Sun 8 AM - 3 PM. VEC testing. Free camping and parking. Talk-n on 146.16/76 MHz (107.2 Hz PL). Info: http://www.chicagofmclub.org.

Tel: 630-628-1501 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 2001

Oct 7 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

NOVEMBER 2001

Nov 4 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. No tailgating. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

DECEMBER 2001

Dec 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Tinley Park Civic Center, 185th St. & Harlem Ave., Tinley Park, IL or at the DuPage County Fair-grounds, County Farm & Manchester Rds., Wheaton, IL. Admis-sion is $6. for adults and children under 12 get in free. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held monthly from 9:30 AM to 4:00 PM. Admission is $6 with free parking. This show features com-puters, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Held in the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gur-nee Illinois. For info, visit the web site at http://www.ccxpo.com.

last changed June 11, 1998

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters

Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)
Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable
Aug 2000 - Phone patches; Identifying scanner crystals
Sep 2000 - Radio Shack PRO-2067 trunk tracking mobile scanner
Oct 2000 - ICOM IC-R3 portable wide band scanner
Nov 2000 - AOR AR3000A wide band receiver
Dec 2000 - Alinco DJ-X2T portable scanner
Jan 2001 - BUTEL ARC2 Software for the ICOM IC-R2
Feb 2001 - RT Systems ADMS-3 Software for the Yaesu VR-500
Mar 2001 - Uniden BC780XLT Trunk Tracker III

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. I don't receive any part of this
reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery

cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface

included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search

limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets

you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power

transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket

and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A

query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the

part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none.

Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

i have the DJ-X10 and i love it hard to use but once ya get the hang of it its pretty good

is the only difference between the 2 just the frequency steps has a user definable step and it recievers up to 2149.999 Mhz opposed to 1999.999 mhz on the older model?

well thanks and happy scanning

Never had the problem here in Canada. If I do happen to get stopped. the cops havew a short 3 minute conversation asking how the hobby is going. and saying it is a good hobby to get into. I think .... and say yeah. I never got in trouble or stopped cause I have a farm of radios and scanners in the car + a vid camera. for that just in case. They do somedays look at me strange when they are parked beside me. but that is about it. Gee. the ham licence plates stick out like a sore thumb. The only people that get spooked some days are people that are speeding. The think a white buick is a cop car. I crack up laughing . and keep on driving. This usually happens at dusk. cause you cannot see much. see lots of antennas. and other strange things on the car. But since they have gotten many new C cars that are unmarked. it does get confusing. I have seen things from a beaten up old chev car. to a new Dodge dakota with floodlighs and a roll bar. etc. now they should do that to photo radar. gee. those vans stick out like a sore thumb.

Disclosure generally means to a third party. Why is personal information about victims being broadcast on the radio? I can see DLs and tag numbers, but why personal information, or detailed info about the crime. That should be in reports that can be shielded until adjudication. Names, addresses and DLs are public information. SSNs should not be divulged under any circumstances. You (even in your official capacity) will not get my SSN unless I am compelled judicially. Unless, of course, you are going to withhold taxes from my pay or extend credit to me!

Calls like this are generated every day in every busy
jurisdiction: A 911 operator gets a call from a woman who says she has
just been raped by a man wearing a mask. She says she lives at 100
Main Street and saw the man walking slowly down the street eastbound.
The 911 op then fills out a card and it goes to the
communications dispatcher.
Dispatcher broadcasts an assignment to several patrol units

with the address of the rape victim and description of the
perpetrator.
Now while the officers respond, 15 year old pimply-faced
Roger, who is armed with a scanner, has the information that a woman
was raped at 100 Main Street. It does not take long for Mr. Roger
Pimples to find out who lives there and he sends obscene mail to her
or calls on the phone to ask how it felt.
Don't laugh, this happened in this news group
(alt.law-enforcement), in a way. A woman admitted being raped,
divulged her address to someone she thought was a real cop via e-mail,
and since then she has been getting repeated obscene phone calls from
the scumbag.
Now I will give you the opportunity to tell us how that
information can be kept off the air by Communications Bureau, and
still be able to dispatch units to the correct scene of the crime
without delay so they can assist the aided person, look for the rapist
and initiate an investigation at the scene.
Regards,
Ken (NY)

It can't. How often does it happen. Why not prosecute the
"pimply-faced kid" for his crimes rather than create a climate of
suspicion and secrecy that affects us all. Or is that your object?

Russ

It made a pretty good market on Ebay.

> I'm just not intersted enough. Also, as another
> poster pointed out a few days ago, digital radio and encrypted,
> digital radio aren't that secure against a determined attack.

The technology exists, as the military uses some pretty mean encryption on
some of their systems. It's cheap, too. The only reason it's not available
to law enforcement or the public is, well, they like to keep their toys to
themselves...and the whole national security thing.

> If
> someone REALLY wanted to know, they could. The equipment and
> techniques would spread like hacking information.

This is true, but at what cost? What I'd settle for is where getting the equipment together and using it is more of a hassle than just following us around and using unidirectional mics to pick up what we're saying. Having a fairly long encryption code that's changed often would do a lot to keep this info private.

> Anyway, we agree to
> disagree about the public records, but have a safe tour.

Thank you.

Does anyone have any experience with Redshift software for computer control of their scanner? Their website is "www.steaksandwich.com" and the Redshift program looks promising. I downloaded the demo but it doesn't seem to work with my BC245XLT. What does it work with? Any pros or cons? Thanks.

In article <3ab5cfd6.7342840@news.speakeasy.net>, Ken4bikes@usa.NOSPAMnet says...
>
I really wish you and the rest of the cops in this country would just be honest with the American people.
You have no obligation (or ability) to protect the individual.
Your "duty" is to to "society". IE your bosses and the "public good".
We need a lot less police.
We need people to protect themselves, their property, their family.
And not depend on the false promise of "protect and serve".
If you are unwilling to have public comms, comms that are RECORDED and can be accessed by everyone in a community then leave.
Get a real job.
Do not expect many of use you have had any dealings, or who have monitored your rogue brothers to respect you clowns. From a poor balck guy in NYC with a toilet plunger shoved up his anus, to another poor black guy blown away buy wome of NYCs finists, who could net tell their own bullets were bounncing back at them, to the Rampart murderers the nation is ful of bad, studip or corrupt cops. Too many only want "Secure" comms so they can hide thier criminal actions from the public. The very people they profess to protect.
Rampart, NYC, New Orleans the list is nearly endless.
I repeat, "good" cops become bad cops when they refuse to stop their fellow officers, fail to report and testify against their many criminal activies.
Or are you going to claim that any cop with half a brain did not know who the really bad cops were in the Rampart LA unit. And did nothing. Cops defend cops. Even the evil, dirty, and bad cops are a central part of your brotherhood.
Again, if you do not like the working conditions, leave.
Give up the "power", the ability to play God, to push the little guy, or gal around. To extract vengence for any percieved lack of respect. I have monitored LEO comms for over 35 years. And every unit that I have monitored is full of swaggering scum. And that is MANY agencies. Over many years.
The bully becomes the cop. Various state, city, county and federal agencies.
It has been a lot of fun monitoring their "secure", ie out of band(ham/frs/cb), and cell comms.
You are not my friend, you are not my protector.
You are a big part of the problem.
And remember the cop mantra, "The world can be divided into three groups, suspects, cop's family and cops". I first heard this quote at a police training facility.

One of the big problems with dead
>> spots, that you started to point out is with Nextel. The Nextel
>> sites are cause of problems to many public safety radio systems.

>And where is your proof.

It is obvious from your comments you have absolutely no technical idea what this discussion is about. It is widely known within the Land-Mobile industry that the proliferation of cell sites, and most specifically, Nextel sites, is causing widespread interference to Public Safety Radio systems. The Press has generally ignored or been unaware of this. That seems to be changing.

For reference, see the USA Today article:
http://www.usatoday.com/usatonline/20010312/3129392s.htm

i was just thinking of a movie that a scanner was a big part of the movie. it was in the late 70's i think. these three people rob this super market. two men and a lady. they are in the arizona desert i think. they are riding around in a dodge road runner if i'm not mistaken. the police helicopter and squad cars are chasing them. they have a scanner in the car. the head cop in the helicopter runs out of gas but he realizes they have a scanner so he sends out false info this freaks out the bad guys then they realize it's a hoax. they are thrilled they've gotten away. then tey crash in a ball of fire into an oncoming train. so the question of this movie is would they have been better off having police silence on the radio or did having freedom to listen kill them? and maybe yor right about 5 minutes for a big bowl of spagetti i'll have to try it at 5 minutes and see how hot it'll get. don

How often does it happen that information like that is broadcasted? Like I said, every day where I worked. And every day somebody is listening in and taking down information that can be used against the victim. I would love to prosecute the crimes committed by stalkers like pimple-face and the police certainly do so. But for every guy like that that gets locked up, there are many more the cops can't catch because they are cautious and are not fooled by phone

traps.
Sorry, but I really don't care as much about any potential
climate of suspicion as I do for the rights of the victims. If secrecy
is the price of their protection, so be it. I'm on that side.
Regards,
Ken (NY)

Around here the cops have mostly switched over from the old system to a new spread spectrum system, more for performance than to evade scanners, although that's a byproduct. (The old system was so bad that a cop in a foot chase ended up having to call 911 on his cell phone for backup because his radio was useless).
Similar to the argument over whether radar detectors should be illegal, or whether you have the right to use a passive receiver or not just because the police are using that frequency for something.

Cells also cause alot of traffic accidents.
In Germany is is law that your cell has to be in holder and not in your
hands while driving

CT. That's what all the articles in the papers said when they switched over; ayear or maybe a bit more ago. I personally haven't seen the equipment so can't say one way or the other. You sure can't pick them up on the scanners anymore, except some of the smaller town where I guess they didn't switch over.

Not to be too general about this but it is not quite possible to decode digital signals.

You may read back through this Newsgroup and alt.radio.scanner for further information about this.

Digital is a Mode, you can tune the frequency but no Scanner I am aware of is able to decode them, nor am I aware of any that is to be available anytime soon.

Palm Beach Scanners- Florida, USA.

I am in need of the programming instructions of the above scanner.

if you can scan the instructions and e-mail them would be great

I have a FAX available too let me know.

Are there any scanners that can receive and decipher digital
transmitted signals?

The Kentucky State Police is going with a digital signal on
their existing frequencies and maybe there is a scanner
out there that will work

I wish all that bleed over would bleed over into my cell phone where it belongs as cell phones pretty much suck
unless you are in an open field, at about 1/4 mile from a cell tower, sitting perfectly still.

I'm anon for an excellent reason, so I can speak freely without people trying to find out who I am and bomb
me or my family as I tell it like it is, and some people don't like reality.
As far as you, apparently you have no idea what you are talking about and must be new in here as Mackie
is known to be this newsgroups retard and slanders and picks fights with everyone, even still slanders and holds
hate against a dead man who died of cancer, bill cheek.
From everyone elses perspective, you are the idiot in here as you don't know what you are talking about while
all the rest of us know the truth about him except you newbies.

Small towns have way too many police and the big cities have way too little.
I suggest all the small town, pot belly bubbas all get transferred from their duties of making money for the city by pulling over everyone who speeds in their insanely unfair speedzones (which they can't obey themselves when they are off duty) and go to the cities and kill a few drug dealers, gang bangers, murders and rapists for us.
As far as racial profiling, hell yeah, there is a reason more black people get pulled over, because they are more likely to be up to something other than going to a church function.

There are 6billion people in this world.
There is always going to be some idiots out there who will do these stupid things.
Consider the amount of people in this world compared to the amount of incidents of these rare things happening and you realize how lucky you are that it doesn't happen more often.
It's all how you look at it and I know you cops like to look at things in worst case scenarios
and the negative part of everything.
As far as laughing, I don't find that incident funny at all, but it doesn't mean billions of dollars
should be spent to upgrade all the nation's systems so us handfull of people can't monitor your job performance and your serving us, the public. Also, you need to realize that what makes
you cops and firemen and so on is the same reason we like to listen to our scanners.
We all like excitement and to feel "official".

I can hear the russians chattering away on 143.625 (nbfm mode) for a few minutes, every few hours. Outdoor antenna helps a lot but when they are near overhead I can hear them from indoors using just a handheld and a whip antenna no problem. You'll only hear one side of the conversation.
Happy Scanning - Ted

Get a digital phone. I used mine once on a cruise in the Gulf of Mexico (I figured we were around 120 miles off of Key West at the time) and it was clear as a bell. It didn't work the closer we got to Cuba so my guess was it was tracking a tower in Key West.

Hi
I have noticed a great deal of American scanner users are very interested in tuning in to the mobile phones and will go to great lengths and expense to obtain a scanner that will pick them up.
I, myself, find this listening to mobiles very boring, here in the UK we are *allowed* to pick up mobiles. But now nearly everybody has digital mobiles, and of course, as yet, we are unable to receive these signals. Honestly, there is very little traffic , if any, on cellular. I have left my scanner searching through the band sometimes for over an hour on a few occasions before I hear anything. Then normally the only talk is something like * Dan is on his way home, so put the kettle on*
I tell you, your not missing anything nowadays. I have four scanners here that will pick up these mobiles, and I will sell and ship them to America if you want one. but if you take my advice, save your cash, it's not worth it.
regards
S.J

No, you have to buy a commercial transceiver.
>
>The Kentucky State Police is going with a digital signal on
>their existing frequencies and maybe there is a scanner
>out there that will work

All systems will be digital in 9 years and the chance that
there will be a digital scanner before then are slim to none.
Due to patents and propriety information the manufacture of
digital scanners is illegal. Also if a digital systems uses
keys or passwords it is illegal to decode them.

Its in our nature I guess, if its bad we want to do it (rather general
statement)

>I, myself, find this listening to mobiles very boring, here in the UK we are
>*allowed* to pick up mobiles

Know what you mean, I find more excitement listening to Radio Beacons than to
Cellular (If I was able that is :-P)

> But now nearly everybody has digital mobiles,
>and of course, as yet, we are unable to receive these signals.

Exactly.

> I have four scanners here
>that will pick up these mobiles, and I will sell and ship them to America if

Best point this week !

Though people will read this and say, WOW I better get one before he sells them
all.

With so much on the air I can not see why anyone would get bored, you have Air,
Military, Police, Rescue, Marine, Business and Hams to listen to...

Cellular monitoring is a sole item for some Scanners, for others it quickly
passes as a boring exercise in futility and did I say boredom.

My 2 cents worth from this side of the pond.

Nope, read back through the Newsgroup here of at alt.radio.scanner where it has been kicked back and forth for quite some time, nor is a Scanner that will get Digital in the works.

There are different types of Digital Systems so any 1 scanner that would do it all is a pipe-dream from what I understand.

Digital Mode is not going to kill Scanning, but it may cramp the style of some listeners.

Maybe the Digital Departments will help us out and start Webcasting Radio Traffic, that a Laptop and a Wireless Modem and I could go mobile!

What I wish they would do is open up the reception of all frequencies but then use Digital Spread Spectrum
for Cell phones since most Cell phones are now capable.
Either that or using digital encryption mode which the majority of cell phones also have.
That way, our scanners no longer have to be so toughly regulated and crippled in ability to receive
certain frequency ranges.
There are still some scanners and wideband radio's that can be easily unblocked through software,
brand new and still being manufactured, but no one expected for the public to find out this information
on how to unblock these radios.
They indeed are getting much rarer though as there are only two that I know of now that can be unblocked through
software and still manufactured and they are each over $2000, eliminating most people from purchasing them.

814. Re: Digital receiving scanners

Newsgroup: rec.radio.scanner
Date: 2001-03-16 21:24:13 UTC
From: * <*@*.*>
Message-ID: <1wvs6.732$0%2.156908@paloalto-snr1.gtei.net>
Source record: 68554

The only difference between analog and digital scanners is that digital scanners have their analog
output filters pulled off, in order to give a higher digital bandwidth, and then the analog output is ran through
an Analog to digital converter, with possibly a decryption routine to decrypt the digital data.
Otherwise, digital radio's work with simple little indian style 16bit data that is transmitted in the raw, if they are not
using encryption. Something that any soundcard can pick up and decode if they had a way of locking to the digital
output's syncronous clock.

I could not agree with you more. Up here in igloo land of Canada have no restrictions on what we listen to. per say. What are people wanting to hear. ?? Phone sex. Ya we may have CDMA. TDMA. GSM. digital. but even the analog stuff. lots of it some days. not very interesting. It is more interesting listening to your neighbor saying how they hate you, or like you. If someone wanted to listen to cells bad enought. they would throw their old phone into test mode and listen away. cheaper and most likely everyone has a old cell phone. but still pretty boring.

Message-ID: <1304b297199b5715fabc20a7b2a85e3b@remailer.privacy.at>
Source record: 68581

That is something I that figured was possible. I was thinking along the lines of the possibility of using two scanners that had good computer control capability and feed the signals into a sound card(s) on a computer. One scanner would be used to follow any trunking and the other to decode the signal in realtime.

Possibilities?

If the software were developed on the web there would be little possibility for problems with patents and copyrights until it was too late. No attempt here to decipher encrypted digital signals.

There is already some pretty sophisticated (and expensive) commercially available software out there to do most of this (so it can be done).

R-500 YAESU COMMUNICATIONS RECEIVER

The VR-500 is a high-performance miniature handheld communications receiver providing general coverage reception from 100 kHz to 1300 MHz on the CW, SSB (LSB and USB), AM, and FM (Wide and Narrow bandwidths) modes. This coverage includes the AM and FM broadcast bands, HF Short-wave Bands, VHF and UHF TV bands, the VHF AM aircraft band, and a wide range of commercial and public safety frequencies.

Main Features:

Frequency Range: 0.1000 MHz - 1299.99995 MHz
Regular Memory; 1000 Ch, (100Ch X 10 Banks)
Skip Memory; 100 Channels
Search Band Memory; 10 Channels
Dual Receive Channel Memory; 10 Channels
Priority Memory Channel; 1 Channel
Smart Search(tm)
8 Character Alpha Numeric Display
Direct Keypad Frequency Entry
Priority Monitoring
Dual Watch
Alpha Numeric Recall
Memory Bank Scanning
Menu Mode for Feature Customisation
Preferential Memory Scan
VFO Search
Size: 58w X 95h X 25d mm, 220 g w/o Battery & Antenna

The VR-500 has a "Auto mode" feature whereby the mode and step size can be selected automatically when a frequency is entered by internal reference to the Auto mode bandplan. The Automode feature can also be turned off and any mode and step size selected manually.

The ADMS-3 package allows the VR-500 to be connected to a Computer and the user upload/dowload data from the radio. All settings can be altered via the PC and the user can store a limitless number of configurations of memory channels, search banks and other data.

I am including the software to program this receiver and the cable to enable you to do so from your computer. JPG available on request.

Yea, why worry about crrooked cops. Thye never hurt the inoocent.
Never prtcie thier own barnd of justice.
Never take bribes, or turn a blind eye to the powerfull elite of thier
commmunity, never drag race at 3:00AM, never do trfic stop just to "look at
the pretty ladies"(quote from actual comm intercept).
Yea, cops never have anyting to hide.
The fine boys down in New Orleans contracted a killing of a witness to
protect society.
The black guy in NYC got a plunger up his anus to protect the rest of us.
The boys in Rampart stole drugs, gramed people and even murdered
people to protect the rest of us.
No sire, we never need to wathc those cops, they are on our side,
ready to protect us.
Yea, and I have some swamp land at the north pole I would like to sell.
I started out thinking cops were the good guys. Like "Andy Taylor", but it was
not long before I found out they were the marginal jocks too dumb for
football. Too bad the rest of America never listenied in on your comms.
We would have had a revolution years ago.
Keep deluding yourself when you think cops are for our protection.
They never shoot, torture, frame rape, rob, or murder innocents.
Yea.......
And the few bad apples everyone keeps talking about, how do they exist?
Because their fellow officers protect each other no matter what.
Why do you think every cop hates the "internal affairs" people?
And keep deluding yourself that trunking, digital, cell phones, PCS phones are
really secure.

Just look who the "cops" where in the old west...the gunmen.
Bad guys gone "straight", hired thugs.
Not much has changed.
Yea, hide your comms from the people who pay your bills, who you are supposed to protect. After all, why would anyone want to listen to the cops.

I'm a ham here in Michigan and have never had a problem. I have several permanent mount VHF & UHF antennas on the car and while I might get a second look sometimes, they've never made an effort to check me out closer. I was stopped in '99 for an expired plate (oops!) by a county deputy and he did ask about my radios. I simply told him I was a ham and gave him my license along with my drivers license, no problem at all . I don't have ham plates either, by the way. However, I can say that the majority of the cops that I've talked to from this area (Mid-Michigan) are well aware of the scanner law and a couple of them have written for it, so if you don't have an MSP permit or ham license definitely be careful!

> Why do you think every cop hates the "internal affairs" people?

Every cop doesn't hate IA. That's strictly movie and TV stuff.

Many (most) cops may have a low opinion of IA, but there are a host of reasons not related to police corruption. For instance, theres the perception they have been used in the past to silence whistleblowers, going so far as to ruin an officer's career and take their freedom. I don't doubt this was done in the past, and the possibility is certainly there now.

They are highly vunerable to political forces, while there is little if any oversite of IA itself.

Hi,

I was just wondering if I can receive satellite frequencies on a Realistic (Radio Shack) PRO-51 hand-held?.{with supplied antenna}

Or would I need a outdoor antenna to receive them? {already have some frequencies for them}

Also would I have to buy a new scanner in order to receive the satellite frequencies?, If so which scanner would I need to buy?.

Please *NOTE* I live in Toronto,Ontario.Canada Please reply to Len Beecroft At lbeecroft8041@home.com

Thank-You :-\

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

You need to go check out http://www.hearsat.org/. Read the FAQ...well read
it all:-)

Some good info. And yes you will be able to hear some satellites with a
Pro-51

Hi Jay,

The 944 or 45778 would be talkgroup ID's the 865.xxx - 869.xxx are the
only frequencies you need, then you enter the talk group ID's
later.... email me your location and we can try and sort out what
frequencies you need....and get your programing the radio up in no
time, I have had my 92 for a while now, and once your get your head
around it, it is very easy to set up...

a good source for the frequencies is Lindsay Blanton's site @
http://www.trunkedradio.net/

: CT. That's what all the articles in the papers said when they switched
: over; ayear or maybe a bit more ago. I personally haven't seen the
: equipment so can't say one way or the other. You sure can't pick them up
on
: the scanners anymore, except some of the smaller town where I guess they
: didn't switch over.

News reporters are not trained in technology. They are humanities
majors. They do the same screw up with guns.

What they are talking about is trunking. This a system of five repeaters
(each has a receiver and transmitter, what the receiver hears is "repeated"
on another frequency by the transmitter). Since there are several repeaters
together on a tower, like cellular phones have as well, when you push the
mike button, everyone in your "talk group" is automatically switched to the
right repeater frequency pair. To make the best use of all the repeaters,
every time you push the mike button, you switch repeaters.

What you need is a trunk tracking scanner like the Uniden BC-245.

:
: Calls like this are generated every day in every busy
: jurisdiction: A 911 operator gets a call from a woman who says she has
: just been raped by a man wearing a mask. She says she lives at 100
: Main Street and saw the man walking slowly down the street eastbound.
: The 911 op then fills out a card and it goes to the
: communications dispatcher.
: Dispatcher broadcasts an assignment to several patrol units
: with the address of the rape victim and description of the
: perpetrator.
: Now while the officers respond, 15 year old pimply-faced
: Roger, who is armed with a scanner, has the information that a woman
: was raped at 100 Main Street. It does not take long for Mr. Roger
: Pimples to find out who lives there and he sends obscene mail to her
: or calls on the phone to ask how it felt.

: Don't laugh, this happened in this news group
: (alt.law-enforcement), in a way. A woman admitted being raped,
: divulged her address to someone she thought was a real cop via e-mail,
: and since then she has been getting repeated obscene phone calls from
: the scumbag.
: Now I will give you the opportunity to tell us how that
: information can be kept off the air by Communications Bureau, and
: still be able to dispatch units to the correct scene of the crime
: without delay so they can assist the aided person, look for the rapist
: and initiate an investigation at the scene.
: Regards,
: Ken (NY)

1) most departments with trunking systems are using MDT (mobile
data terminals) to convey confidential information. MDTs also allow
the LEO during a traffic stop to directly input license data without going
through the dispatcher. Saves a lot of time.

2) If you go to a totally encrypted system, you lose the ability to listen
to other agencies, which most LEOs do with scanners. A trunked, digital
system has talk groups, almost like private repeaters. If your radio is not
programmed with a talk group, you do not hear them. With encryption
it is impossible to hear them without you having your radio programmed.
The departments are not going to put 2 or 3 trunked radios (at the cost
of $4000 each) into every squad car and fire truck. Plus we had a situation
here where the ambulance service did not want the fire departments on their
talk group. Therefore the fire fighters could not talk in an ambulance
crew.

And in Indianapolis, the deputy who transports prisoners to court only has
dispatch in his radio. He does not have the court bailiffs talk group or
the
I'D downtown talk group. If he has an escaped prison, he has to coordinate
through the dispatcher.

Remember, a city like Indy has hundreds of talk groups. Seattle has over
a 1000! Now add the Indiana State Police trunked system and it gets even
worst. Add total encryption to that and no one can coordinate. It totally
shuts down everyone.

3) It is very easy for a group of corrupt cops to "bribe" a commo tech into
programming a talk group that no supervisor has access to. If the system
is totally encrypted it would be impossible for the supervisors to ever
discover
the existance of the talk group. Just too many talk groups in the average
big
city.

4) My guess is that encryption will wind up in the hands of the courts like
phone taps are now. You will have to have a court order and supervision
to encrypt. Too many abuses otherwise.

>The only difference between analog and digital scanners is that digital scanners have their analog
>output filters pulled off, in order to give a higher digital bandwidth.

This statement is very wrong - first of all, digital (APCO25 compliant) signals use a much lower bandwidth, 6.25/12.5KHz as opposed to analog's 16KHz/25KHz. That's why digital is taking over, less bandwidth is required. Secondly, the modulation technique used by digital radios is not plain FM, digital uses what is called CQPSK or C4FM. This technique uses a mixture of frequency modulation and phase shifting to achieve 4 levels of modulated data. The output from the demodulator is a digital signal conforming to the IMBE vocoder standard. Below is the APCO25 explanation by the National Communications System.

The basic characteristics of Project 25 radios are:

. a Phase I emission designator 8K10F1E (C4FM [compatible four-level frequency modulation]) for operation in a 12.5 kHz channel and a Phase II emission designator of 5K76G1E (CQPSK [compatible quadrature phase shift keying]) for operation in a 6.25 kHz channel;
. use of a common receiver for both C4FM and CQPSK to assure full interoperability between the two signals;
. use of an IMBE (Improved MultiBand Excitation) vocoder with 4400 bits/s of digitized voice, 2800 bits/s of error correction on the voice, and 2400 bits/s of signaling overhead, for an aggregate bit rate of 9600 bits/s.
. encryption defined for the U.S. Data Encryption Standard (DES) algorithms, but other techniques can also be employed;

So it's not as simple as your Radio Shack DAC following the FM detector.

There is a way of receiving digital transmissions and it would involve demodulating the C4FM/Phase signal then applying the I & Q signals to the IMBE Vocoder. Maybe then you will have yourself a digital scanner. Here are some links to help you get there.

This is a new scanner and the only software available (that I'm aware of) is to purchase it via ScannerMaster off a link at http://www.bc780xlt.com I just purchased the 780, and I was slightly annoyed that Uniden didn't see fit to include the programming commands with the manual. If you had them, you could easily develop your own program (assuming you know VB or another appropriate language).

Here we have a regional system we share with most of the agencies in
our county. We have trunked talk groups we share for interagency
mutual aid. The encryption codes are the same for everyone on the
system to avoid this problem. Our officers are each issued a portable
radio so they don't need scanners. Since we only have 205 officers at
our agency, it cost us less than $900,000 to equip each officer with a
portable plus a few spares for loan when a radio goes to the shop for
repair or reprogramming.

They don't have the non trunked national calling and tac channels
programmed? Our system is on 800MHz. All our radios have the
calling channel and all four of the tactical channels programmed. We

can talk to agencies not on our trunk system that have 800MHz radios
on these shared frequencies.

How does the group work without being programmed into the
communications computer system? Our system has to have each talk
group set up in the controlling computer. We can get printouts of
talk group usage by radio ID to see when, how long and what talk group
the user is using. Each user has to sign for their portable radio,
each car is assigned to a user for that shift so each radio ID is
traceable to an individual user or vehicle and driver. Each radio we
have is logged in a data base that includes a list of all talk groups
programmed into the radio. You should know how many groups are
authorized in your system. The talk group report from the master
computer should be able to count the groups currently in the computer.
If they don't match, start looking for the difference. At 50 lines per
page average (allowing for headers on each page) you only have to
review about 40 pages (20 pages for the authorized list 20+ for the
report from the computer list with the unauthorized groups) When you
find the group that doesn't match, run a report for the usage for that
group. Check those radios IDs that show up on the report and take
action against those officers who have unauthorized groups in their
radio. Ask the users who programmed the group in the radio. (Our
employees have no right to not answer questions in an administrative
inquiry. If they refuse to answer that is insubordination). Take
action against the tech for creating an unauthorized talk group.

We have procedures in place to deal with abuses if they happen. They
don't happen very often.

Of course, police officers are uniformly (no pun intended) hostile to the idea of CIVILIAN coordination with or oversight of IA. Must be more to it than the fear of "political" forces. Generally, the police do not wish to be reminded that they might be answerable to anyone who does not wear a police badge.

I want to point out that, while I favor open access to routine police communications and operational information, I do not believe that scanner-monitoring citizens are an effective check on the abuse of police power. Abuse happens during direct encounters between police officers and citizens. There are few if any practical ways to monitor those events all of the time.

Civilian review and citizen monitoring seem to be the next best thing for now.

And you listen to one talk group at a time on an HT (like the 3000 series).
An HT is good when you are out of the car and need only to talk to the
folks in your patrol group or dispatch. But in the car, if you do not have
radios to listen to adjacent patrol areas, fire department and other groups
that
may effect you then you are blind and deaf.

: >is totally encrypted it would be impossible for the supervisors to ever
: >discover the existance of the talk group. Just too many talk groups in
the average
: >big city.
:
: How does the group work without being programmed into the
: communications computer system? Our system has to have each talk
: group set up in the controlling computer. We can get printouts of
: talk group usage by radio ID to see when, how long and what talk group
: the user is using. Each user has to sign for their portable radio,
: each car is assigned to a user for that shift so each radio ID is
: traceable to an individual user or vehicle and driver. Each radio we
: have is logged in a data base that includes a list of all talk groups
: programmed into the radio. You should know how many groups are
: authorized in your system. The talk group report from the master
: computer should be able to count the groups currently in the computer.
: If they don't match, start looking for the difference. At 50 lines per
: page average (allowing for headers on each page) you only have to
: review about 40 pages (20 pages for the authorized list 20+ for the
: report from the computer list with the unauthorized groups) When you
: find the group that doesn't match, run a report for the usage for that
: group. Check those radios IDs that show up on the report and take
: action against those officers who have unauthorized groups in their
: radio. Ask the users who programmed the group in the radio. (Our
: employees have no right to not answer questions in an administrative

: inquiry. If they refuse to answer that is insubordination). Take
: action against the tech for creating an unauthorized talk group.

You pointed out that your trunk sites have 12 to 20 repeaters on them.
In big cities, there may well be over a 1000 talk groups. After awhile
supervisers stop looking. Or everything gets buried in too much data.
And, after a few years, everyone gets too comfortable. Rules get bent.

: >
: >4) My guess is that encryption will wind up in the hands of the courts
like
: >phone taps are now. You will have to have a court order and supervision
: >to encrypt. Too many abuses otherwise.
:
: We have procedures in place to deal with abuses if they happen. They
: don't happen very often.

My guess is that encryption will be rained in after being used for awhile.
Departments are not going to be willing to buy $4000 encrypted scanners
so that LEOs and fire fighters can listen to each other. The $400 trunk
trackers
are just too affordable. And most radio traffic is not worth encrypting.
Look
back to the days before scanners. Most cops used their radios more like
CBs,
telling dirty or racist jokes. Once the public does not listen, most of the
professionalism
will go away. If LEOs feel that they are not being observed, their jock
nature
comes out.

It may take a few years, but encryption is just the "new toy". And it will
create
more problems than it solves.

On my AR8000, there is a low-level noise hiss when the squelch is on, as if the audio amp in not really being silenced in the absence of a signal, but rather something ahead of the audio stage being cut out (likely the IF stage). I have implemented the fix where you put a 10 uF electrolytic cap in the squelch circuit to slow-down the squelch response. This eliminates the sputtering squelch you get when a signal is on the edge. Trouble is that it extends the squelch tail for everything. Thus every transmission ends in a pronounced "Psshhhhht" because of the increased squelch delay. I got around that by putting a small DIP switch inside the unit so I could switch the 10 uF cap in or out of the circuit. I've labeled the switch "slow" and "fast" squelch.

First, Who doesn't ahve a antenna farm on their vehicle ? I never understood who you were talking about. and about taking your ham licence. We here get one from Industry canada. One for your wallet and one huge one the size of a award. So I have one always in my wallet. But that still doesn't mean a ham is not doing something illegal! No I am not trying to offend hams. That would mean I am offending myself too. But it is those stupid scanner and hams that DO used radios for illegal use that gives all of us harmless listeners a bad name. We get stopped for a antenna. thank the criminals for that..

The Left has pushed this idea that they can "control" the police and
the military. Therefore they believe they do their part by paying taxes.
Maybe someday they will realize that if they are not part of the "gang"
then they little more than serfs who support the knights.

There are libertarians as well that want to believe that they can have
some control yet not serve. In reality the only way to control the police
and the military is to be a member. There not much room in America
for the non conformist or the loner anymore than there is room for the
elite shitheads of the left.

These scanners are highly sought after. Pretty good all purpose scanners.
They are also highly modify-able. The only drawback I see is they don't trunk.

Reasonable prices range from $200-$300 (and up in some cases).

Typical problems include dim backlight display.

Check out
http://www.strongsignals.net/htm/rev2006.htm as well as the whole
strongsignals site.

Happy scanning!

I will be attending an airshow this summer featuring the AirForce Thunderbirds. Does anyone know where I can find radio frequencies to listen to them on my scanner?

Thanks,

Daren

tnx
i only found audio feeds though :(
but they're cool, too
but i am still looking for frequencies, if anyone could help i'd be glad :)

I have a nice VR500 for sale, in very good condition, with rechargeable battery, charger, manual, box and soft carrying case.

I'm only selling this to gather enough money to buy an FT-817, otherwise, I'd keep it.

Will ship to conus for $235, paypal, money order or bank check.

I'd like to get CB frequencies with my Bearcat BC55XLT. Is a mod possibble?
If so, what is it.

Thanks...

Equipe every car with a camera/vcr (and the officer with a wireless mic)that the cop does not have access to VCR. Require all trafic stops to be recorded. No recording the arrest/citation is tossed. Require all interviews, all police "suspect" contact to be recorded, again with police unable to acess the VCR. I know of at least one city that backed away from in camera TV/VCRs because of the liablilty issues. They were afraid, with a lot of reason, of having every police/driver encounter "on the record".
In at least one central Ky city the traffic cops looked for attractive young

ladies and pulled them over. They were pretty blatent about it on the radio.
I sent the chief, the mayor, the county attourny and the head of the KSP
copies of the same saturday night recording. 2 good old boys retired. Others
were reassingned. But all I really accomplished was to warn the cops that they
are monitored. Then they switched to cell phones thinking that was secure.
And they got real careless about their comms. And yea, it is illegal to listen
to cell phones. But guess what major central Ky city had about 10 Pro2004
modified to unlock the cell coverage right after the ECPA was passed.
Adn I am sure that they never, ever listend to conversation that were not
approved by a court order. Oh, but a general purpose scanner can not lock on
to or exclude a certain NAM. And I loved it when a bunch of cops set up house
on the 2mtr ham band.
I still insist that cops are terrified of accountability. They like to be able
to toss their weight around in the certaintity that their fellow cops will
protect them.
Face it, cops want to hide behind the badge, behind the lie that they are
there to protect us. To "protect and serve"..yea, really?
Too bad the USSC has ruled many times that cops "have no obligation to any
single member of society". It is fun to show people the text of such rulings
and the cases that resulted in those rulings. If enough people knew that cops
are not their friends, not there to protect and serve. but only there to
collect the bodies and evidence, the police might lose a lot of support.
By keeping the lie alive that they protect us they manage to repress us.
Never, ever trust a cop.
They are not your friend, not your protector.
They are like the garbage collector or sanitary sewage worker.
A public servent, only they have illusions of honor.
Remember Rampart, NYC, New Orleans, or Lexington's own Drew Thorton.

881. Re: Cellphones drowning out police radios

Newsgroup: rec.radio.scanner

in europe you would be hard pressed to find someone hold on to a cell phone
while driving. But that does not mean they are not using the phone and
talking.

So is it talking on the phone that cause accident or holding a phone that
cause it ?
If holding than I guess we should also ban all drive thru fast food as well.
If talking than all radios in the car should be outlaw and the driver
compartment sealed off from passenger so that no one can talk to the driver.

Now we can see how dumb this become. AFAIC common sense should be the rule.

Anybody knows how to unlock the cell phone frequency on Uniden SC-150?

That quoted part from KA2TYT is not true. What is says is that you cannot receive signals that are encrypted and therefore not intended for interception or signals that are covered as wireless telecommunications. In other words, if the signal is encrypted, you are not allowed to circumvent the encryption. If it is a wireless phone call, you can't listen. Simply making the signal use a published digital modulation technique is not enough. The fact that the APCO-25 standard is published should make it OK for you to build a receiver.

LISTEN CAREFULLY: It is the NATURE OF THE COMMUNICATION THAT DETERMINES WHETHER OR NOT YOU MAY LISTEN!!!! LISTENING TO PUBLIC SERVICE COMMUNICATIONS IS STILL MOSTLY LEGAL!

LISTEN CAREFULLY AGAIN: There is a difference between making a signal digital and encrypting a signal. They are NOT the same thing!!!!

I wish the people in this group would get it through their heads that digital scanners will come when there is enough demand for them. That is how our system works. When Uniden can make money selling digital scanners, which they already know they can, they will fight for the right to sell them. I would be willing to bet you they have an APCO-25 compliant scanner at least at the design stage right now. How much demand can there be at this point?

No one thought there would ever be a scanner like the 780XLT now did they? Go back in DejaNews and look at all the posts predicting the end of scanning when trunking came along. People were absolutely convinced that trunking was some sort of plot to rid the world of scanners.

Get a real life, people!

>the LEO during a traffic stop to directly input license data without going
>through the dispatcher. Saves a lot of time.
>
Most LEO think that MDT are secure.
About ten years ago I bought one from a legitimate surplus outfit.
Whiole touted as "super tough to break" it took less a Saturday afternoon to read the Loisville PDs MDT. And because they think they are "Secure" they are fairly loose mouthed (called a black guy the N word) I gave mine to a black friend who lived there. After a few years he got disguted with the city life, and moved back to his family's farm in south west Ky. He thought the police were a little funny but pretty "Damn stupid". They were running narc busts via the MDT and he thought that if the bad guys had half a brain they would have one of their own.

886. Over 330 Scanner pictures....

Newsgroup: rec.radio.scanner

Just a note to let everyone know that I have added more scanner pictures
to the "Scanner Pix" page.&#65533; Over 330 Now!
http://www.webdeals.net/scanpix.htm
Thanks to all of you who have sent in these great shots of older scanners!
I'm seeing scanners I never knew existed. I feel that I'm a true Scanner Nut
but everyday I get new pictures of scanners I've never seen before. Keep
those pix coming. I just got an extra 30 MB of server space to add more.
Remember scanner pictures only please. No short-wave radios unless they have
coverage above 50mhz too.

Here is a list of the pictures I now have:

The problem with these recording devices is they are highly unreliable, and that's by design. You have the city, county or whatever government take bids, and the lowest bidder gets the job. In LA, an agency just scrapped their cameras because the company that maintained them went belly up. A defense lawyer finds out there's a recording device, but no recording, he's going to blast the case out of the water, like any good attorny. Somebody accuses a cop of brutality, the recorder malfunctioned, and BOOM, there's something afoot. Then you have the problem with wireless audio feeds, which aren't reliable enough for you to want to stake your career on.

Officers worry about this, and they worry about some civilian or polititon looking at this tape, seeing standard procedures, and, not knowing anything about real police work, call it abuse and use it to further their career or agenda, all the while crushing this cop's life.

I don't know many officers who don't like having a camera on them. As a matter of fact, several carry voice recorders, like the officers in the San Bernardino, CA, incident, where an illegal alien was finally caught after a high speed chase and clubbed.

Even those aren't the most reliable things going. I had to pay $300 for two of mine, just to make sure I got quality stuff.

I'd carry a portable video system, but there aren't any on the market that are suitable, much less affordable.

It's easy to see all of this as cops not wanting to be observed for crooked reasons. I wish these departments, especially my agency, did a better job of informing the public of what we do and how we do it. I read the press releases or the "No Comment" and I cringe.

well cell phones are not that boring here in canada and i would think the states also. I hear people talking about their sex life, drug dealing and all kinds of other crap. nothing like listening to a real world soap opera. Analog is alive and well here and i think the country is too big to worry about it switching to digital in the near future.

I have my HT set to scan the talk groups I need to monitor. My main
dispatch group is set to priority so I don't miss what is going on

there. I don't have access to the fire department groups and have no need to monitor them. If we need to talk, we go to a common group set up for that purpose. In a large city I doubt that an officer has the capability to effectively monitor all the groups that may effect him and do the other tasks needed while on patrol, even if he has the radios to do it. At home I have my police HT, a 300 channel scanner, 2M, 440MHz and a Kenwood TS850S. It is tough to keep them straight at times, and I don't have to drive or monitor my environment while trying.

If you checked I would be willing to bet that all of them do have at least one talk group in common that they could switch to if they needed to coordinate directly. If they don't, the person that designed the system should be fired.

>

Simplex? Ours are on a repeater, and have simplex also. Since they are analog there should be no problem talking to a GE system. No one uses a GE system in this area that we need to talk to so it doesn't matter for us. As I pointed out, most users in the county use the same shared system. Those that don't use Motorola.

>: communications computer system? Our system has to have each talk
>: group set up in the controlling computer. We can get printouts of
>: talk group usage by radio ID to see when, how long and what talk group
>: the user is using. Each user has to sign for their portable radio,
>: each car is assigned to a user for that shift so each radio ID is
>: traceable to an individual user or vehicle and driver. Each radio we
>: have is logged in a data base that includes a list of all talk groups
>: programmed into the radio. You should know how many groups are
>: authorized in your system. The talk group report from the master
>: computer should be able to count the groups currently in the computer.
>: If they don't match, start looking for the difference. At 50 lines per
>: page average (allowing for headers on each page) you only have to
>: review about 40 pages (20 pages for the authorized list 20+ for the
>: report from the computer list with the unauthorized groups) When you
>: find the group that doesn't match, run a report for the usage for that
>: group. Check those radios IDs that show up on the report and take
>: action against those officers who have unauthorized groups in their
>: radio. Ask the users who programmed the group in the radio. (Our
>: employees have no right to not answer questions in an administrative
>: inquiry. If they refuse to answer that is insubordination). Take
>: action against the tech for creating an unauthorized talk group.
>
>You pointed out that your trunk sites have 12 to 20 repeaters on them.

Actually 20 trunked repeaters, five non-trunked.

>In big cities, there may well be over a 1000 talk groups. After awhile
>supervisers stop looking. Or everything gets buried in too much data.
>And, after a few years, everyone gets too comfortable. Rules get bent.
>
>: >

Maybe. Your comment was that it would be impossible for a supervisor
to ever determine that an unauthorized group was in use. I
respectfully disagree.

>: >4) My guess is that encryption will wind up in the hands of the courts

>Once the public does not listen, most of the
>professionalism
>will go away. If LEOs feel that they are not being observed, their jock
>nature
>comes out.

That happens here sometimes, but it is monitored, by us. Recently one
of my officers got a reprimand for keying the mike and striking it on
his MDT in response to a comment he thought was funny. Last year an
officer was suspended for two days for mispronouncing Virginia as
Vagina on purpose. We monitor MDT traffic also. It is all logged and
randomly checked. We don't tolerate misuse. We take the FCC rules
seriously here, just like most good ham operators do. And like ham
operators, we police our own frequencies.

>
>It may take a few years, but encryption is just the "new toy". And it will
>create
>more problems than it solves.

Encryption in one form or another has been in public safety systems
for decades. I doubt that it will go away any time soon.

i posted this in another section but got no responses. i'll try it as a post. does anyone rember the movie where a scanner is used to outwit the criminals? these 2 guys rob a super market and the lady the one guy was boinking the night before jumps in their car to get to california. the police know haryy larry and betty is in the arizona desert somewhere. the police chief gets in his helicopter to look for the criminals. he uses a police scanner to talk with the police in the cars. the criminals had a scanner. the helicopter cop finally figured this out. he wante the car to run out of gas but the criminals at the last figure out what the chief was doing. they are real excited yo see them laughing and high fiving as they crash into a firey ball into the side of a train. don

Just another example of how the government is making itself further and further from the people. There will be a time where the to serve and protect will be a thing of the past. I saw a photo of FBI agents and they looked just like terrorists. They are make mister meaner crimes felonies now. That means less and less people have the right to vote. Its time to make some changes not just in the federal level but in the local level too. Taxes are to high. The police don't care about people anymore and as technology grows the more and more the government and its agencies will be further and further from the people.

WAKE UP PEOPLE! ITS TIME!

>antenna the wrong length. I've taken to carrying my Amateur license where
>ever I go because of this...

If true, this is an obvious case of harassment. Doesn't met the "probable cause" requirement, either.

Had a similar situation in my area, about 20 years ago when CB was still big among the masses. Thinking teenage CBers were somehow responsible for an increase in petty theft, vandalism, etc., the local police department began targeting them. Any vehicle with a CB antenna was suspect and subject to being stopped and harassed for no other reason.

One night, they picked the wrong dude to screw with. Pulled him over, accused him of being involved in various crimes against property (they had no proof), illegally searched the trunk of his car (they found nothing), and confiscated his CB.

His father was a prominent attorney who just happened to specialize in criminal defense. Needless to say, this event was thoroughly examined in court and the unlawfully detained motorist received a nice little financial sum for his trouble. Some "internal changes" within the department also took place rather quickly.

I am selling a YAESU FT-50 RD dual band HT, which has been modified
for extra TX and RX. The radio itself is MINT, and fully functional.

The following additional items come with this package :

*Rubber protector
*EDC5B cig lighter plug
*Yaesu ENB-41 9.6V 600 maH battery with spring clip
*MAHA MH-FNB-V47 7.2V 1800 maH batteru with spring clip
*MAHA MH-FNB-40H 7.2 V 600 maH SLIM battery
*Extra spring battery clip
*YAESU NC50 dual drop in charger with sleeves
*ADMS programming software with cable

$300.00 for everything, shipped

US Postal money order or personal check. When check clears, I ship.
Shipping will be via USPS Prioryt Mail, insured.

NO C.O.D., NO TRADES

E-mail if interested.

: there. I don't have access to the fire department groups and have no
: need to monitor them. If we need to talk, we go to a common group set
: up for that purpose. In a large city I doubt that an officer has the
: capability to effectively monitor all the groups that may effect him
: and do the other tasks needed while on patrol, even if he has the
: radios to do it. At home I have my police HT, a 300 channel scanner,
: 2M, 440MHz and a Kenwood TS850S. It is tough to keep them straight at
: times, and I don't have to drive or monitor my environment while
: trying.

Throughout Indiana, most LEOs have scanners plus their car
radio and an HT. Some even have CBs. That deputy just east
of Indy who caught those two kids from NH (they were arrested
for killing those two professors) was a ham and had CB as well.
He just happened to hear a trucker ask if anyone could give two
kids a ride to California and made it sound like he was a trucker.
It was a very good bust.

: >: >And in Indianapolis, the deputy who transports prisoners to court only
: >has dispatch in his radio. He does not have the court bailiffs talk
group or
: >: >the I'D downtown talk group. If he has an escaped prison, he has to
: >coordinate through the dispatcher.
:
: If you checked I would be willing to bet that all of them do have at
: least one talk group in common that they could switch to if they
: needed to coordinate directly. If they don't, the person that designed
: the system should be fired.

I would expect that as well. But it takes time to coordinate. It is
easier to just switch over to their talk groups.

: >: >Remember, a city like Indy has hundreds of talk groups. Seattle has
over
: >: >a 1000! Now add the Indiana State Police trunked system and it gets
even
: >: >worst. Add total encryption to that and no one can coordinate. It
: >totally shuts down everyone.
: >:
: >: They don't have the non trunked national calling and tac channels
: >: programmed? Our system is on 800MHz. All our radios have the
: >: calling channel and all four of the tactical channels programmed. We
: >: can talk to agencies not on our trunk system that have 800MHz radios
: >: on these shared frequencies.
: >
: >Of course, all radios have the five simplex freqs.
:
: So I guess they can coordinate on them then if they need to.

They are mostly for tactical and fire ground commo.

: > And most trunked
: >systems are on 800 Mhz. BTW, what happens if you department uses
: >a Motorola system while the city next door uses the GE system? Your
: >radios do not talk to each other.
: >
:
: Simplex? Ours are on a repeater, and have simplex also. Since they are
: analog there should be no problem talking to a GE system. No one uses
: a GE system in this area that we need to talk to so it doesn't matter
: for us. As I pointed out, most users in the county use the same
: shared system. Those that don't use Motorola.

The five common frequencies are not repeated, they are simplex.
And used for tactical commo.

We have cities where there are multiple systems plus the state
system. Plus cities that either border or cross county lines. We
are trying to get a state wide system that is under the State Police
control and have everyone use the same thing.

The new Motorola XTS 3000 has trunked, repeated and simplex
built in. Once APCO 25 is brought to market (it is the digital system)
then everyone should have the same standards so manufacturer will
not matter.

: >: >3) It is very easy for a group of corrupt cops to "bribe" a commo
tech
: >into programming a talk group that no supervisor has access to. If the
: >system is totally encrypted it would be impossible for the supervisors to
ever
: >: >discover the existance of the talk group. Just too many talk groups
in
: >the average big city.
: >:
: >: How does the group work without being programmed into the
: >: communications computer system? Our system has to have each talk
: >: group set up in the controlling computer. We can get printouts of
: >: talk group usage by radio ID to see when, how long and what talk group
: >: the user is using. Each user has to sign for their portable radio,
: >: each car is assigned to a user for that shift so each radio ID is
: >: traceable to an individual user or vehicle and driver. Each radio we
: >: have is logged in a data base that includes a list of all talk groups
: >: programmed into the radio. You should know how many groups are
: >: authorized in your system. The talk group report from the master
: >: computer should be able to count the groups currently in the computer.
: >: If they don't match, start looking for the difference. At 50 lines per
: >: page average (allowing for headers on each page) you only have to
: >: review about 40 pages (20 pages for the authorized list 20+ for the
: >: report from the computer list with the unauthorized groups) When you
: >: find the group that doesn't match, run a report for the usage for that
: >: group. Check those radios IDs that show up on the report and take
: >: action against those officers who have unauthorized groups in their

: >: radio. Ask the users who programmed the group in the radio. (Our
: >: employees have no right to not answer questions in an administrative
: >: inquiry. If they refuse to answer that is insubordination). Take
: >: action against the tech for creating an unauthorized talk group.
: >
: >You pointed out that your trunk sites have 12 to 20 repeaters on them.
:
: Actually 20 trunked repeaters, five non-trunked.

That is common. More or less.

: >In big cities, there may well be over a 1000 talk groups. After awhile
: >supervisers stop looking. Or everything gets buried in too much data.
: >And, after a few years, everyone gets too comfortable. Rules get bent.
: >
: >: >
:
: Maybe. Your comment was that it would be impossible for a supervisor
: to ever determine that an unauthorized group was in use. I
: respectfully disagree.

It depends on the department. Remember Bill Cheek? He was able
to break the Motorola MDT code and recorded the NYPD LEOs
doing all sorts of things like telling sexual and racial jokes. Departments
like that have huge professional problems. For one thing NYPD has
over 40,000 LEOs. Almost as many as the whole federal government.

: >: >4) My guess is that encryption will wind up in the hands of the
courts
: >like phone taps are now. You will have to have a court order and
supervision
: >: >to encrypt. Too many abuses otherwise.
: >:
: >: We have procedures in place to deal with abuses if they happen. They
: >: don't happen very often.
: >
: >My guess is that encryption will be rained in after being used for
awhile.
: >Departments are not going to be willing to buy $4000 encrypted scanners
: >so that LEOs and fire fighters can listen to each other. The $400 trunk
: >trackers are just too affordable. And most radio traffic is not worth
encrypting.
: >Look back to the days before scanners. Most cops used their radios more
like
: >CBs, telling dirty or racist jokes.
:
: >Once the public does not listen, most of the
: >professionalism will go away. If LEOs feel that
: >they are not being observed, their jock nature
: >comes out.
:

: That happens here sometimes, but it is monitored, by us. Recently one
: of my officers got a reprimand for keying the mike and striking it on
: his MDT in response to a comment he thought was funny. Last year an
: officer was suspended for two days for mispronouncing Virginia as
: Vagina on purpose. We monitor MDT traffic also. It is all logged and
: randomly checked. We don't tolerate misuse. We take the FCC rules
: seriously here, just like most good ham operators do. And like ham
: operators, we police our own frequencies.

Your department has better leadership than most. It is most likely
a mid size department. The small and very large departments are
the ones that see the most abuse.

: >It may take a few years, but encryption is just the "new toy". And it
will
: >create more problems than it solves.
:
: Encryption in one form or another has been in public safety systems
: for decades. I doubt that it will go away any time soon.

I do not expect it to go away. I just do not expect it
to be used for daily traffic.

901. Voice comms in 72-76 Mhz range?

904. Radio Receiver

Newsgroup: rec.radio.scanner
Date: 2001-03-18 06:39:10 UTC
From: Sam Houston <donotreply@interbulletin.bogus>
Message-ID: <3AB4580E.4FB1428@interbulletin.com>
Source record: 68443

Greetings everyone.
I am interested in building a radio receiver that can receive frequency
between 43MHz and 46MHz

1)Where can I find circuits on the web for such a receiver?

2)Will a trimmer capacitor work for this receiver or do I need the
kind of variable (tuning) capacitor that is used in an old radio?

Thanks

I am a newbie. What is an "IF Filter"? What does IF stand for. If it says "IF Filter at 20khz", then what does the 20khz mean?

Thanks,

You won't find anything in Police Call for the islands of Hawaii.

Honolulu PD is currently using an 800 Mhz EDACS system which they've
recently switched back to analog mode. The frequencies and talkgroups
for HPD can be found at the following URL http://www.qsl.net/ah7e/

This site is also a good source for many other frequencies in Honolulu.

The AirNav site also contains frequencies for Honolulu Intl Airport:

http://www.airnav.com/airport/HNL

These are some of the frequencies that I logged for the island of Oahu
while I was there over the Christmas and New Year holdiday:

Ala Moana Shopping Center
Mall Security & Mainteance 463.8500 / 468.8500 PL 173.8

IF stands for "Intermediate Frequency" and the 20Khz describes the
bandwidth, probably at the -3Db points, of the filter.
The IF is an amplifier that goes between the Mixer and the Detector.
The mixer gets two signals, one from the aerial and one from the Local
Oscillator, the mixer mixes these together and produces two or more
other frequencies, depending on the type of mixer involved.

in the following .. RF = aerial signal, LO = Local Oscillator signal
IF = Intermediate frequency amplifier.

MIX out, aka (IF in) = RF, LO, RF + LO, RF - LO, RF + 2LO, RF - 2LO
etc

the IF filter determins which mixer product is selected and passed on
to the IF amplifier. The 20 Khz filter is hopefully just be a roofing
filter otherwise the reciever will not be very selective.

Well here in Oregon, Polk County Fire uses 72 MHz as a repeater to link
to 154.235. By listening to the 72 MHz repeater I can hear mobile stations
talking to dispatch.

Not that it is a big deal to anyone else...
But I just heard the International Space Station!

I had put 143.625 in my mobile unit that is in the house w/ outdoor antenna and forgot about it.... and I started hearing a Spanish sounding voice, then it sounded Iranian, then I figured out is must be Russian. Last about 5 minutes from about 2:45 to 2:50am Central Standard Time. (may have had a pl tone of 118.8?)

It's been in there for 2 weeks, but never heard anything before.

Conditions outside were cold, but very clear.

By the way, I live near St. Louis

Hi all
It's born the first italian (but open to people all over the world)
mailing list for people interested in radio scanning. In this list the
official language is italian.
People that want to susbscribe this list send a blank email to
scanner-italia-subscribe@yahoogroups.com and wait for subscription
approval.

Ciao gente
E' nata la prima mailing list italiana (ma e' aperta a tutti, anche non
italiani) dedicata alle persone che hanno l'hobby del radio-scanning. La
lingua ufficiale e' l'italiano.
Tutte le persone interessate, non devono far altro che mandare un email
vuota a scanner-italia-subscribe@yahoogroups.com ed attendere
l'approvazione.

912. Airnav loading problem

Newsgroup: rec.radio.scanner
Date: 2001-03-18 12:23:49 UTC
From: Planet Internet <roald.kooijman@wxs.nl>
Message-ID: <99294d$12j60$2@reader03.wxs.nl>
Source record: 68351

Problem with Airnav 3.1

Since 2 weeks I got the problem the loading procedure after starting the program won't finish anymore. This is what's happening:

The loading bar is for about 80% filled with blue blocks (which gives the status of the loading procedure), and then nothing happens anymore. It has nothing to do with memory problems I presume, because other running programs can normally used, even when the loading procedure of Airnav has been stopped.

I downloaded and installed Airnav again, but that gave the same result.

Can someone give me some answers?

Thanks in advance,

Roald Kooijman

the unmitigated audacity to write:

>Just another example of how the government is making itself further and
>further from the people. There will be a time where the to serve and protect
>will be a thing of the past. I saw a photo of FBI agents and they looked just
>like terrorists.

I have it on the highest authority that the FBI has decided to
make their undercover agents wear 3-piece suits beginning on February
30, 2002.

>They are make mister meaner crimes felonies now. That means
>less and less people have the right to vote.

Good point. We have to downgrade those meaner crimes to
misdemeanors so more people can vote. We will get right on that.

>Its time to make some changes not
>just in the federal level but in the local level too. Taxes are to high.

Mr. Bush is working on that problem. Write your liberal
Senator and tell him to vote for the tax relief bill.

>The
>police don't care about people anymore and as technology grows the more and
>more the government and its agencies will be further and further from the
>people.

Definitely, we have to move the police stations nearer to the
people's houses and develop two-way communication devices - such as
telephones.

> WAKE UP PEOPLE! ITS TIME!

This is certainly fun. I'd recommend getting a sat tracking program
to predict it's overflights. I enjoy awaiting it's arrival/departure
as it goes above/below the horizon. I use:

http://www.satscape.co.uk/

Are you tired of having to weed through all the crap on the newsgroup,
dealing with message boards that are out of control?

Check out the Radio Classifieds.
It is a board designed to do away with the trolls of the internet, and
make a nice place where Radio enthusiasts like myself can post their
wares, trade, or get help information.

There are many features to this board and is very close to the
"Infopop's Ultimate Bulletin Board".

There is a wide variety of topics, like CB Radio, Export Radios,
Microphones, Test Equipment, Antenna's, Modifications, Ham Radios,
Scanners, Shortwave Radios Parts, Home Entertaiment, Car Audio & Video,
plus much much more.

Come by and join up today. You will be glad you did!

The Radio Classifieds:

Hello! Im selling my Pro-92 @ $200.00 US

Like new used only 1 month with no scratches or scuff marks. I will include a home adapter 9v. And a 9v. Car Adapter for mobile operation. also I will included 6 new radio shack deluxe RECHARGEABLE Batteries w/ rechargeable pack. (totaling abt. $85.00 in extras). Works great! This scanner has the best RX I have ever seen in a portable scanner.

This is a Radio Shack PRO-92 Multi-Trunking Scanner, has 500 channels, this is like new in the box with the manuals, rechargeable battery holder + , antenna, and as an extra, a car adaptor that allows you to run is from your car's cigarette lighter.

This is an amazing scanner, there are whole web pages and discussion lists and domain names devoted to this exact scadxnner. Hmm, is this a scanner or an *occupation*? So, here it is! Feel free to email me with any questions, thanks!

Cash, money orders, or PayPal + 2% for paypal fees, thanks.

This Unit Retales For $349.99...thanks for looking! Shipping Terms and Conditions of Sale --- Buyer pre-pays endprice + Shipping and insurance in the amount of $10.00 + $1.10 Insurance) --- Your order will be insured for the endprice of the item. I will cover the cost of any additional insurance if required (insurance is required on all orders..I will not ship without insurance against loss or catastrophic handling).

Simultaneous Trunking - tracks three trunking systems, LTR, Motorola Operation and EDACS at the same time, as well as conventional systems. --- Text Input - lets you input a text label for each channel, talk group ID, bank, or other memory so you can easily know about the transmission you are hearing. --- Subaudible Tone Decode - decodes and displays the Continuous Tone Coded Squelch System (CTCSS) tone signal being transformed. --- Digital Subaudible Tone - decodes and displays the Digital Coded Decode Squelch (DCS) being received. --- 12-Character, 4-Line - shows you detailed operating information and Dot Matrix Display lets you easily program the scanner. --- Data Cloning- lets you transfer the programmed data to another PRO-92 scanner. You can also upload or download the programmed data to or from a PC using an optional interface kit. --- 10 Channel-Storage Banks - let you store 50 channels in each bank to group channels so calls are easier to identify. --- Triple Conversion - virtually eliminates any interference from Superheterodyne Receiver intermediate frequency (IF) images, so you hear only the frequency you select. --- Hyperscan and Hypersearch - the scanner scans at up to 25 channels per second and searches at up to 50 steps per

second, to help you quickly find interesting transmissions. --- 60 Preprogrammed Frequency - let you search for transmissions within preset frequency ranges or within ranges you set, to reduce search time and select interesting frequencies more quickly (I found this to be very educational and very useful). --- Scan Delay - delays scanning for about 2 seconds before moving to another channel in conventional mode, so you can hear more replies that are made on the same channel. --- Priority Channel - you can set the scanner to check one channel every 2 seconds so you do not miss important calls. --- Signal Attenuation - lets you program each memory to reduce the (Attenuate) scanner's sensitivity to storing local signals, to reduce interference or noise caused by these signals. --- Weather Alert - automatically sounds the alarm tone to advise or hazardous weather conditions when it detects the alert signal on the local National Oceanic and Atmospheric Administration (NOAA) weather channel. --- Weather SAME Decode - displays the weather event text so you can see the reason for the alert. --- Lock out Function - lets you set your scanner to skip over specified channels or frequencies when scanning or searching, and skip over IDs when Tracking trunked systems. --- Key Lock - lets you lock the scanner's keys to help prevent accidentally changing the scanner's programming. --- Flexible Antenna with BNC - provides excellent reception and is designed to help prevent antenna breakage. --- Memory Backup - keeps the frequencies stored in memory for an extended time even without a battery. --- Three Power Options - let you power the scanner with internal batteries (non-rechargeable batteries or rechargeable batteries). You can also use an AC adapter (the one I bought I'm including in the auction) or power the scanner in a vehicle using a DC adapter (not supplied). ---Supplied Police Call - provides a quick reference to public safety Trunking trunking radio systems in the United States. --- Frequency Ranges: ------29 - 54 MHz ------108 - 136.9875 MHz ------137 - 174 MHz ------380 - 512 MHz ------806 - 823.9875 MHz ------849 - 868.9875 MHz ------894 - 960 MHz

934. Something I heard on Space Shuttle frew Satuday afternoon

Newsgroup: rec.radio.scanner
Date: 2001-03-18 20:35:39 UTC
From: inter1097@aol.com
Message-ID: <20010318153539.03846.00000969@ng-mn1.aol.com>
Source record: 68373

Instead of hearing stuff from te shuttle, I heard some kind of contest between kids. Something to do with remote control robots or something. Thought it was kind of intresting but I did not get to hear all of it.

I have 2 questions,

1) anyone know where I can listen to a recording (or possibly see pictures) from this contest thing online?

2) Since the shuttle frequencies are relayed by amateur radio stations, are they breaking the rules for broadcasting? what I heard fit the definition of broadcasting.

Thanks for your help.
Tony

A couple of comments on KLARRG's post-
1. Don't forget a full wave bridge rectifier to change the AC to DC.
2. You can improve your garage door's cellular reception with a cryogenically cooled Low Noise Amplifier.

If anyone has a list of St. Louis frequencies, could you
please post it?

Thanks in advance.

943. Re: Franklin County MO. (St. Louis Area) New frequency?

Probably went trunked. Pearland Texas was/is on 155.970 and you only hear dispatch.But they are on Harris County...Even though they are in Brazoria county. So check local trunk groups along with surronding Counties.

Hi Guys,

This week I will fly in with united airlines to dulles int. airport from europe. After a 2 hour wait I will depart for orlando, fl.
Can you tell me what freqs are interesting enough to listen to during this stop ?

945. 2 week stay in florida, interesting freqs. wanted

Tony,
Not sure what "this contest thing" is, so I can't help you there, but in reference to item 2: FCC Rules Part 97.113 Sec. E states: (applicable section starts at the asterisk)

" No station shall retransmit programs or signals emanating from any type of radio station other than an amateur station, except propagation and weather forecast information intended for use by the general public and originated from United States Government stations and (*) communications, including incidental music, originating on United States Government frequencies between a space shuttle and its associated Earth stations. Prior approval for shuttle retransmissions must be obtained from the National Aeronautics and Space Administration. Such retransmissions must be for the exclusive use of amateur operators. Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur communications."

Note the qualifiers at the end, this is a very limited privilege.

I am stuck in my efforts to choose between a Uniden UBC3000XLT and Radio Shack Pro-26, both with full coverage.

Any pro/con opinions would be greatly appreciated.

cheers

I have a brand new still in the box BC-245 for sale.
I had no audio out from my 245 so I ordered a new one from Grove.
After I had already placed the order I was exercising the earphone
jack on my original 245 and the audio started working again so I do
not need two. I paid $200 plus shipping. I will sell it for $200
and I will pay shipping. If anyone wants any more info you can email
me at wfm0@hotmail.com
thanks

Well, you will have to find the jumper to clip. Also, there are two diodes that you need to change the position of on the circuit board, and then, if you want to get really good performance and high sensitivity, you will need triple conversion and good filters. Also, you dont mention if you have an antenna for this beastie, but if it is not made of metal, there may be a problem in picking up anything more distant than the tip of your shoe. All of this will vary from one manufacturer to the next.

That wasn't from the shuttle. Since the astronauts were sleeping, NASA TV broke away from shuttle coverage Saturday to cover a robotics competition held at space centers around the country. I'm guessing the ham relay didn't stop, so you got a little bonus...

From everone I have talked to the only problem is with 800 MHZ MDT's, the
voice is fine, we are considering switching to 800MHZ trunked, and testing
MDT's for possible use.

Thanks Dick...

I have a AA rechargeable setup, so in that regard, it would be more
convenient to go with the Pro-26.

Thanks again

>Agents do a review of each department in the US and wake them up.
>
I believe that you and I are on oposite sides.
Whre I see evidence that the police are not to be trusted, you want to show the boys how to not get caught. I do not want to tech the boys in blue how to be more effective at their criminal activities. Until and unless we can clean the cops up, a task that I do not think can ever be managed, I do not want to give them any help in sweeping their attitudes under the rug.
It does no good to force cops to stop telling racist and sexist jokes on their comms system. You have not changed atitude only taught them to cover up.
Reread you comment about their off color jokes, behavior that is further proof that cops are not our friends. They already have the us vs them mind set and nothing is going to cahnge that. High school jokes withbadges, guns and the "forde of law" to back up their criminal activity.
At the risk of repeating myself, never, ever trust a cop.
They are the only legal organised crime gang in the USA.
Rampart is only the tip of an ugly iceberg.
Every smart cop want "secure" comms so they can hide their activites from their communities. Cops do not want civilian review and control.
Every cop I have known has admited that they know who the "bad apples" are. And admit that they are unwilling to end thier carrier to stop the abuse.
If you are a LEO, and if you are honest with us,don't you know which fellow officers can be counted on to rough a suspect up a "little bit", to stretch the truth to cnovert a questionalbe traffic stop into a legal one? If your dpartment does not have cops that beahve in such a manor, please tell me where you live. I will consider moving there next week. Over the last 35 years I monitored a lot of police comms, in over 20 states and many cities. I have heard questionable comms, comms that appear to denote activity that is plainly illegal. Traffice cops looking for pretty girls was a favorite activity of many agencies for years. And in smaller towns, stops are made without informing diaptch(no record), but the LEOs would talk to their buddies on cell phones about the dope they just scored. And what teenager is ever cgoing to complain that officer badge just stole his grass. In Richmond Ky the tennagers

knwe ot to have the cheap stuff, that would result in them being busted, but if they had good weed, it was "confiscated" and they walked. Happens everywhre.
In Mt Steerling (a dry community) the cops and bootlegers had a cool deal going. IF you had out of county tags, and bought booze at the bootleger the cops would stop you, confiscated the booze and send you on your way. Then resell the booze to the bootlegger. He even had a police radio.
Dayton had a similar deal. Buy dopein an out of county car, get stoped and the dope was "confiscated". The cops would call up the dealer and offer to sell it back. In Indianopolis the cops loved to pull over youn single driver ladies and offer to "forget it", if the lady gave them a blow job. I always hoped that a girl would bite somenumb nuts penis off. He would have ahell of a time explaining that assault. A jailer in easter Ky died with his pants down around his ankles, the young black lady killed the sucker. She walked and got a nice settlement, everyone knew his hobby. The jailer in Frankfort Ky just went to jail for the same activity. So excuse me if I have no respect for LEO etal.
Most of my refference are for central Ky, but they are just the ones that jumped out. I did not log this crap, and except in a few cases never made tapes. In Chicago I heard some cops bragging, over the police radio, about how they had sucered a little "sh_t" by telling him the photocopy was a lie detector. They thought it was funny. Maybe so, but it does not speak well of Marinda that thye did not care that the suspect had rights. Or the night in Ft Wayne where the cops were trying to get their story straight on just how that 17 year old black kid got beaten real bad. A cop thought he was ther perp in a nasty rape and decided that he was not going to take any more crap. Wrong kid, but nothing ever happened. He resisted arrest you see. But it sure sounded like they had him cuffed before they started the fun. Their sargent was even offereing hints as to what had happened.
And how many cops do you knwo have a peice of music that they love to play whilst in hot pursuite. It used to be the theme for hill street blues, but Bad Boys looks like number one today.
So trust a cop?
Respect a cop?
Not in modern America.

I would agree with private police comm only if transcripts
or audiorecordings were available to the public soon after,
if requested.

That would solve two problems : perps knowing the cops are
coming and cops hiding evidence of illegal acts or racial
profiling by securing comms.

965. PRO-92 - to smash or not to smash?

Newsgroup: rec.radio.scanner
Date: 2001-03-19 05:25:34 UTC
From: jay585cool@aol.com
Message-ID: <20010319002534.04384.00003794@ng-fi1.aol.com>
Source record: 68253

This pro 92 is driving me nuts. I'm a pretty smart guy. I read the instruction manual and the book called "police call" that radio shack sells, but to no avail. I can NOT figure this thing out. I entered in all 21 of the 800MhZ frequencies listed in the "trunking guide" that came with the scanner. I pick up transmissions on those sometimes, but the books or the websites don't say which police precinct is using which 800MhZ frequency. Now, in "police call" it says "Suffolk County, NY" (my county), then it has those 800MhZ frequencies. Then it is broken down into a different kind of frequency ranging from 155.xxx to as low as 37.xxx. I was told to enter these freeks into a different bank then the one that I have the 800Mhz' in. I did, but no change. Also, the main reason I got the scanner was so that I could listen to Ocean Beach PD and the Suffolk County Sheriffs Dept. OBPD is listed as just "944" and the SCSD is listed as "848" and "880". I tried entering those in, and it said "in valid frequency". Then I was told that I have to press "func" + "trunk". I did that, and a new type of screen came up allowing me to enter in these smaller numbers. The book said that Suffolk Co. used a Motorola system, so before adding in the trunk #'s i pressed "mode" until "MO" showed. Then I entered in several different numbers just so i would have a broad range of different town PDs within Suffolk County. They are NOT working. Please help me, this is my first scanner, and all of this is very discouraging. Thanks in advance...

Jay

966. Re: PRO-92 - to smash or not to smash?

Newsgroup: rec.radio.scanner

Source record: 68256

Police call isn't the easiest source for trunking information; the net is. I recommend searching scanning websites for a link to a page that shows the trunking frequencies for your area. Police call is a pretty good source for talkgroup ID's though.

You may also try www.pro-92.com to see if there is an .spg file already designed for your area. Of course the file is only of use if you have software and a cable.

Anyway, many websites list the trunking frequencies for most major parts of the country. The same sites will also tell you if the trunked systems are Motorola, EDACS, LTR, etc. That's all necessary information for programming your scanner properly.

Good luck...

I have a question for all of you out there that want scanners with unblocked cellular frequency access:

Since all of the cell phone companies are giving away digital cell phones simply for signing up or renewing your existing cellular plan, there probably is no activity on analog? Why would anyone use analog cell phones anymore unless you are out in the sticks where there is no digital coverage?

I've been looking for an unblocked Icom IC-R2 for months now and I can't believe how much I've seen people pay for them. I got an e-mail from a guy selling one and he wanted $250 and he said he was "giving me a deal". They go for more than that on eBay. What the hell are people thinking? You can buy a NEW retail unit in the US for $149.95. I got a quote from Javiation on the unblocked scanner and he said, "The IC-R2 is 130.00 Pounds including delivery by Air Mail. This works out to be about US$180-$200 at the moment." So why would people expect their USED units to go for so much more than a new unit? The only explanation is that since it can receive cell frequencies somehow people can justify paying way too much. I can't even comprehend this. I'm looking for the unblocked unit simply because the US units are crippled. It feels crappy to be spending $150 on a sweet little machine and in the back of your head you know, "hmmm this isn't the full potential of this unit". But thanks to all you cell voyeur freaks who are ready to blow too much cash on your fetish so you can jack off while listening to marianne calling her son to tell her she'll be home soon, the market value is all out of whack. I know it's ridiculous for me to want an unblocked scanner when I wont be using those frequencies anyways, but I do. I can't explain it really, perhaps some of you understand. Anyways I guess I'll just order a new US unit. Or maybe I can find a used one for around $100 because I'm not going to give in to extortion.

I read in another post that the NASA transmissions are rebroadcast on Ham. Can someone tell me what freq that transmission is on?

FYI: I scan with a Uniden BC245XLT. Hey, it is surely not the best... but it was pretty cheap!

Thanks

Carey

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

I do have members that live in such places as Oregon and New York. So, the part about living in central California is not set in stone.

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

--

Here are some lists that i have created for scanner monitoring hobbyists place question on these and i will answer them to the best of my ability and i hope others will contribute anyway here are the lists.

http://groups.yahoo.com/group/hf_airband This is mainly for HF Airband monitoring

http://groups.yahoo.com/group/uk_airband This is mainly for UK HF, VHF,

UHF Monitoring

http://groups.yahoo.com/group/uk_scanner_frequencies This is for any

scanner info at all and frequencies e.t.c

Thanks

Jonny

I'm sure I saw a bandplan [not individual users though] on a HongKong SAR government website. It may be from the govenment department which approves telecom equipment. This should at least give you an idea of where to start scanning..

what are the laws on scanners in Hong Kong? I know in China you get *big* trouble, but is the HKSAR a bit more lenient?

Alex

Bugging Frequencies

Major "Real-World" Bugging Frequencies

Over the years I have had numerous TSCM and intelligence people ask for
an outline of the RF spectrum used by bugging devices. Bugging devices
can appear on any
frequency between DC and light, this list covers the more common bugging
frequencies that tend to be used.

The frequencies that follow are all based on hard documentation
(catalogs, intel reports, technical materials, etc...). For the purpose
of intelligence analysis the Source
Reliability Scale should be considered A, and the Data Validity Scale
should be rated as 1.

This list is updated every two or three weeks, please foward (via US
Mail) any technical materials you would like to see reflected in the
list.

Remember to check the entire RF spectrum, not just specific frequencies;
however, keep in mind that people doing buggings like to stay clustered
around certain
frequencies.

Summary (this will catch 99.99% of all Non-Intell/Diplomatic RF bugs)

All TSCM Inspections should include the following frequencies: (Expect
to see less than .5-25 mw maximum at the TX antenna) (Do not expect the
signal to be present for
more than 20uS-100uS)

To find RF transmitters a search grid of roughly 15 foot by 15 foot (the size of an average office) should be used.

All phone rooms, riser closets, demarcs, boots, etc. MUST be checked.

Remember that the microphone/camera can be hundreds of feet away from the transmitter.

Use a digital spectrum analyzer and a wideband receiver with an analog 10.7/21.4mhz SDU on the IF, dispersions of 100/200/500khz).

RF Spectrum Analysis and monitoring should take place for at least twelve solid hours during a regular sweep (72 hours or more is preferred).

To prepare for IPM the spectrum should be evaluated/monitored for at least four hours prior to the event.

Most non-gvt RF bugs will have a transmit frequency between 9khz and 6ghz.

The Spectrum Analyzer inspection must cover at least 3khz to 40 ghz

VLF Detection-Audio .3 khz to 100 khz Video Cameras &
Tape recorders
VLF Detection-RF 12 khz to 500 khz Video Cameras &
Tape recorders
VLF Detection-Audio .3 khz to 150 khz Microphone/Ultrasonic
Chirping

Carrier Current Bugs 3 khz to 50 mhz 99% Voice
Carrier Current Bugs 20 mhz to 300 mhz 99% Voice
(AC Mains Antenna)

RF Bugs-HF 3 khz to 50 mhz 99% Voice
Space RF Bugs-VHF 30 mhz to 300 mhz 10% Video/80%
Voice/10% Data
Space RF Bugs-UHF 300 mhz to 900 mhz 25% Video/60%
Voice/15% Data

RF Bugs-Microwave1 900 mhz to 3.0 ghz 70% Video/20%
Voice/10% Data
RF Bugs-Microwave2 3 ghz to 18.5 ghz 75% Video/15%
Voice/10% Data
RF Bugs-Microwave3 18.5 ghz to 40.0 ghz 75% Video/ 5%
Voice/20% Data

...and of Course Infrared! (Look for "IR Blooms")

700 - 1100nm Audio Transmitters/Lasers (CF between 880 and 950nm)
750 - 900nm Night Vision Illuminators
900 - 1710nm IR Video Illuminators

Note:
Most military/intelligence and governmental TSCM inspections look for devices between 3khz to 220/300mhz for Carrier Current, 20khz to 40ghz

for regular free space RF radio devices, and directional microwave devices from .3ghz to 110/120ghz.

Common Wireless Bugs (Low Power - Well under 35-50 mw)

44.500 - 51.000 mhz "Baby/Room" monitors
72.100 - 75.400 mhz Hearing Assistance systems
54.000 - 150.000 mhz "Kit" Bugs

98.000 - 108.000 mhz Cheap out-of-band FM Bugs
112.000 - 142.000 mhz Cheap out-of-band FM Bugs
140.000 - 160.000 mhz Cheap out-of-band FM Bugs

60.000 - 320.000 mhz Low Cost kit bugs
398.000 - 406.000 mhz DECO Bugs (398.600/605, 399.450/455, 399.025/030, 406mhz)
25.000 - 450.000 mhz European/English Kit Bugs

150.000 - 216.000 mhz Typical VHF "Body Wire" & Pro-Grade Bugs
109.000 - 140.000 mhz Digital VHF Pro-Grade Bugs
138.000 - 174.000 mhz Typical "Spy Shop" & LE Cheap VHF Bugs (155-172 Popular)
140.000 - 150.000 mhz Popular Xandi Flea power kits (143/144mhz)
150.000 - 170.000 mhz Popular Japanese Flea power kits (under 5mw)

150.000 - 220.000 mhz Commercial Wireless Microphones
169.000 - 172.000 mhz 47 CFR 90.265 Authorization (VERY Popular)
174.000 - 216.000 mhz 47 CFR 2.106 (NG115) Authorization
395.000 - 410.000 mhz German UHF Wireless Microphones (PK Electronics)
219.000 - 530.000 mhz English UHF Wireless Microphones (300-500 popular)
470.000 - 608.000 mhz Commercial Wireless Microphones
730.000 - 806.000 mhz Commercial Wireless Microphones

889.000 - 960.000 mhz Modified Cordless Phones (S/S & Hoppers)

380.000 - 480.000 mhz Video Bugs - US
890.000 - 960.000 mhz Video Bugs - US (902-928 Hot)
905.000 - 928.000 mhz Video/Audio Consumer Products (i.e.: Recoton)

1.700 - 1.930 ghz Video Bugs - US
2.400 - 2.500 ghz Video Bugs - US *** VERY Popular ***
5.725 - 5.850 ghz Video Bugs - US *** VERY Popular ***

1.100 - 1.400 ghz PAL Video Bugs *Very Hot in England/France/etc*
2.400 - 2.500 ghz PAL Video Bugs *Very Hot in England/France/etc*
3.500 - 4.500 ghz PAL Video Bugs *Very Hot in

England/France/etc*

430 - 550 mhz Popular French Video/Audio Bugging System
950 - 2500 mhz Popular French Video/Audio Bugging System
700 - 900 mhz Popular Italian Audio Bugging System

"Tactical" Bugs

225 - 400 mhz "Throw away" bugs (10uw-300mw Beer can bugs)
290 - 330 mhz Micro-powered Bugs (5uw-10mw Cigarette Butt Bugs)

30 - 500 mhz Tactical Repeaters (75mw-300mw)
285 - 400 mhz Tactical Repeaters (50mw-10watts)
100 - 152 mhz VHF Tactical Repeaters (300mw-25watts)
135 - 174 mhz VHF Tactical Repeaters (300mw-25watts)

VLF and Carrier Current Type Bugs

9khz - 490 khz Carrier Current 47 CFR 15.219 Auth
(250 mv max.)
490khz - 1.705 mhz Lossy Cable 47 CFR 15.221 Auth
(1000 mv max.)
450khz - 30.00 mhz PLA Systems 47 CFR 15.207 Auth
(30 mv@ft/30ft max.)

3 - 200 khz 300 mw High Grade Pro Bugs (over 500$
each)
100 - 200 khz 50-100 mw Older Bugs
120 - 200 khz 30-50 mw Pre 1990 intercoms
200 - 300 khz 30-50 mw Post 1990 intercoms
300 - 400 khz 250-400 mw TELCO Line transmitters (355khz
popular)

300hz - 30 khz Cable TV Carrier - Hardwired microphones
30khz -300 khz Cable TV Carrier - Coaxial Bugs

100 - 450 khz Threat Window #1 Most CC Bugs
3khz - 3 mhz Threat Window #2 Expensive "Pro-Grade" Bugs
5khz - 32 mhz Threat Window #3 Popular WJ Carrier Current Rcvr
3khz - 50 mhz Threat Window #4 Realistic Threat Window
for Telephone Wire
15mhz - 70 mhz Threat Window #5 Audio/Video "Micro-Wire"
RF circuits

WECO Bugs "boosted/ultrasonic audio" found on Power/CATV/Telco lines

64kbps to 1.5mbps Digital Bugs T-Carrier-Lo (T-1 and Below)
1.5mbps to 50mbps Digital Bugs T-Carrier-Hi (T-1 and above)
2.048mbps Digital Bugs Definity Circuit Pack Bug
32mbps Digital Bugs TMS Channel/Backplane bridge
Designed to transmit on CC or Microwave ISM Spread Spectrum
(2.4-6.0ghz)

VLF Devices
25khz - 90khz Tape Recorder Bias Osc-Low End (35-45khz Common)
80khz - 145khz Tape Recorder Bias Osc-Mid Range
(88.2, 96, 100khz Common)
100khz - 325khz Tape Recorder Bias Osc-Pro Grade
(100, 150, 300khz Common)
40khz - 50khz Tape Recorder DAT/Hi8
(44.1/48khz Common)

8khz - 35khz Recorder Audio Servo Noise (10-20khz Common)

7khz - 35khz Video Camera VLF Detectable emmisions
15.750 mhz Common NTSC Video Camera
15.734 mhz CCD/PCB Video Camera (very easy to detect)
15.625 mhz Common Video Camera

Also, be aware of ultrasonic/audio emmisions from most VLF devices.
(Utilize a EOD/Bomb Tech Stethoscope, and Ultrasonic Spectrum
Analyser)

Commonly Used Law Enforcement Bugging Frequencies

37.000 - 952 mhz FCC Surveillance Blanket Authorization 47 CFR 90.19
"Physical surveillance, stakeouts, raids..." Straight
AM/FM, FM-Subcarrier, SSB, Spread Spectrum, and Hoppers. If encrypted,
it usually uses in-band voice inversion or DES. (Normally
well under 2 watts... most under 35-150mw)

148 - 174 mhz
135 - 250 mhz Out-band Wireless Microphone
174 - 216 mhz In-band Wireless Microphone
350 - 440 mhz Common Video Freqs
380 - 930 mhz Wide Band Hoppers
806 - 824 mhz
851 - 869 mhz
905 - 930 mhz Popular Audio/Video Band

1.4 - 1.5 ghz Common Video Freqs
1.7 - 1.9 ghz Common Video Freqs (1.710 - 1.755 REAL Popular
at 1/10 watt)
2.4 - 2.5 ghz Common Video Freqs (2.400 - 2.450 REAL Popular)
5.7 - 5.9 ghz Common Video Freqs (5.725 - 5.850 REAL Popular)
8.5 - 10.8 ghz Common Video Freqs

AID - Westinghouse/Audio Intelligence Devices, Inc. Bug Freqs
150 mhz - 174 mhz Standard/Primary Band (Most Popular)
135 mhz - 150 mhz Special Order/Secondary Band
216 mhz - 220 mhz Special Order
400 mhz - 470 mhz UHF Repeaters

36 mhz - 39 mhz Very Low Power WFM (.5mw - 50mw)
Very Dangerous
80 khz - 200 khz "Line Carrier" Microphone Systems
Very Dangerous

1700mhz - 1900mhz 25-250mw Video and audio bugs
(Mostly DEA/DOJ stuff)
2450mhz - 2484mhz 25-250mw Video and audio bugs

If the signal is "scrambled" it is nothing more than simple voice inversion, a circuit to "de-scramble" costs around $20.

Note: AID devices are often re-tuned for outband channels... so be careful.

The area of spectrum from 35mhz to 500mhz is the primary threat, 500mhz to 3ghz is the secondary threat, a "line carrier" threat is from 30khz
to 750khz.

If the person planting the bug suspects that a TSCM may be conducted then AID suggests a frequency between 30mhz to 50mhz, sensitivity of rcvr should be better than .18uv/-122dbm.

Also, keep in mind that AID devices are frequently used for illegal buggings, so be familiar with what their realistic specs are, expect power outputs under 50mw, and expect to see the AC power circuits being used as the antennae.

Security Research Bugs

145 mhz - 175 mhz FAST-II-L Computer Bug - 1, 3, 10, 30, 100mw
170 mhz - 204 mhz FAST-II-H Computer Bug - 1, 3, 10, 30, 100mw

60 khz - 200 khz "Line Carrier" Microphone Systems
Very Dangerous

1.1 ghz - 1.4 ghz 250mw Lynx Video/Audio Bugs (L-Band)
2.5 ghz - 2.6 ghz 250mw Lynx Video/Audio Bugs
3.8 ghz - 4.2 ghz 250mw Lynx Video/Audio Bugs

Note1: LYNX video bugs and cameras are frequently built into old bricks, wooden joists, logs, gate posts and such... VERY, VERY Dangerous and
easily concealed.

Note2: Most Security Research Bugs utilize fixed frequency inversion to protect against detection, the most commonly used frequency is a 1.862khz inversion point.

173.075 - LOJACK Auto tracking system beacon (200ms burst every second)

Police Speed Enforcement Radar

10.450 - 10.600 ghz X-Band
11.488 - 11.628 ghz RD Detector
22.976 - 23.256 ghz RD Detector-2nd Harmonic
24.050 - 24.250 ghz X-Band
33.400 - 36.000 ghz Ka-Band
700nm - 1100nm Laser Threat

Electronic Article Suveillance/Anti-Shoplifting Systems

8.10mhz - 9.30mhz Checkpoint (Hi-Q Tags) 8.2mhz Common
57.75khz - 58.75khz Sensormatic (Magnetic) Books, CDs, and Tapes
915mhz and 1830mhz Knogo (Microwave Resonant) Adhesive Labels

25 - 50 mhz "Bumper Beepers" (38 - 47 mhz very popular)
135 - 170 mhz "Bumper Beepers" (150-170 mhz very popular)
450 - 512 mhz "Bumper Beepers"
903 - 904 mhz "Bumper Beepers"
904 - 912 mhz "Bumper Beepers"
918 - 926 mhz "Bumper Beepers"
926 - 927 mhz "Bumper Beepers"

WARNING:
The area between 900 mhz and 6 ghz is ** EXTREMELY DANGEROUS ** as the eavesdropping equipment in that range is inexpensive, low power, and highly directional.

Additionally, most TSCM people will not check frequencies above 1.0/1.5 ghz or 3 ghz (because the equipment is too expensive for them to buy).

I have seen surveillance video tapes of TSCM inspections where the video cameras (Watec), microphones (Sony), and microwave RF transmitters (AID - 2.4ghz) were never detected by the inspectors (using 1ghz AVCOM Spectrum Analyzers).

Surveillance Satellite (TK-Keyhole) Frequencies

Note: Mostly Wideband Spread Spectrum/LPI channels
420mhz - 450mhz
1.2ghz - 1.4ghz
1.7ghz - 1.9ghz (1.76-1.84 real active)
1.9ghz - 2.2ghz (2.115 real active)
4.9ghz - 5.0ghz
7.5ghz - 8.3ghz
10.6ghz - 12.6ghz (11.7-12.2 active)
17.8ghz - 21.2ghz (SIGINT Birds)
23.6ghz - 24.0ghz
25.5ghz - 25.7ghz
22.8ghz - 33.5ghz (30-31ghz SIGINT Birds)
42.5ghz - 47.0ghz
50.3ghz - 52.4ghz
78.0ghz - 85.5ghz
86.3ghz - 98.3ghz (86-92 real active)

Note: Can be anywhere between 20ghz and 110ghz, mostly spread spectrum

Commonly Used by Federal Agencies for Bugs, Wireless Microphones, and Body Wires (also 138-220 mhz, and 399-420 mhz, under 25-50 mw).

149.3500, 165.9125, 167.3375, 167.3425, 167.4875, 168.0115,

418.6750 DEA F4 EMILY (416.325) Surveillance

407.8000 CIA, State Department
408.0500 Federal Shared
408.5750 Federal Shared
409.4000 Federal Shared

960-1215mhz Spread Spectrum Systems (Wideband)

Generally Recognized Federal Bug/Spy Bands

Primary - 25-50mhz, 135-175mhz, 225-440mhz, 1710-1950mhz, 8.3-12.5ghz
Secondary - 890mhz-5.50ghz, 7.0-9.5ghz, 10-39.6ghz

Also, Wide Band Frequency Hopping centered on various UHF-TV channels
(ie: 510 or 670 mhz with a hopping width of +/- 25 mhz)

Keep in mind that the federal government can use virtually any
frequency between DC and light.

Spread Spectrum/Hopping Bugging Frequencies

Legit Industrial Equipment (very inexpensive)
902 mhz - 928 mhz ISM band A (Very Popular)
2400 mhz - 2484 mhz ISM band B (Very Popular)
5725 mhz - 5850 mhz ISM band C
10500 mhz - 10550 mhz ISM band D
24075 mhz - 24250 mhz ISM band E

SS Amateur Radio Bands Often used for eavesdropping (very inexpensive)
50 mhz - 54 mhz 6.00m Amateur Radio Equipment (STA)
144 mhz - 148 mhz 2.00m Amateur Radio Equipment (STA)
222 mhz - 225 mhz 1.25m Amateur Radio Equipment (STA)
420 mhz - 450 mhz 70cm Amateur Radio Equipment (47 USC 97.305)
902 mhz - 928 mhz 33cm Amateur Radio Equipment (47 USC 97.305)
1240 mhz - 1300 mhz 23cm Amateur Radio Equipment (47 USC 97.305)
2300 mhz - 2450 mhz 13cm Amateur Radio Equipment (47 USC 97.305)
3300 mhz - 3500 mhz 9cm Amateur Radio Equipment (47 USC 97.305)
5650 mhz - 5925 mhz 5cm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Occasionally used for eavesdropping
10.00 ghz - 10.50 ghz 3.0cm Amateur Radio Equipment (47 USC 97.305)
24.00 ghz - 24.25 ghz 1.2cm Amateur Radio Equipment (47 USC 97.305)
47.00 ghz - 47.20 ghz 6.0mm Amateur Radio Equipment (47 USC 97.305)

SS Amateur Radio Bands Rarely used for eavesdropping (very expensive)
75.50 ghz - 81.00 ghz 4.0mm Amateur Radio Equipment (47 USC 97.305)
119.98 ghz - 120.02 ghz 2.5mm Amateur Radio Equipment (47 USC 97.305)
142.00 ghz - 149.00 ghz 2.0mm Amateur Radio Equipment (47 USC 97.305)
241.00 ghz - 250.00 ghz 1.0mm Amateur Radio Equipment (47 USC 97.305)
300.00 ghz - Light (3 Thz) Amateur Radio Equipment (47 USC 97.305)

Note: Most commmon spread spectrum/hopping bugging equipment will hop at speeds between 100 and 50,000 hops per second. Equipment is readily available that hops even faster (100,000 to 300,000 hops per second). Dwell times can be as small as 1us (one widely used military system uses a dwell time of 3-5us)

Outband Equipment
ANY Television broadcast or Cable TV frequency
ANY FM radio broadcast frequency
ANY Paging or Beeper frequency
ANY Cellular Telephone frequency

820 mhz - 960 mhz Modified (902-928) Cordless Telephones
Modified Amateur Radio Equipment (can be on ANY frequency)

Keep in mind that wideband (non-ISM) Spread Spectrum/Hopping Bugs are very
difficult to detect(even if you are within a few feet). Watch for carrier
feed-through, and "Noise Floor Humps".

All Spread Spectrum devices are detectable

Once Spread Spectrum/Hopping Bugs have been located (on the RF spectrum) all that can be done is to locate the sourse of the emission... it is virtually impossible to demodulate a SS signal unless you have access to the key.

Also, a 500mw ISM device can easily have an effective range of over 20 miles.

Look for spectral anomalies (humps) on the Spectrum Analyzer, and back up with a Compressive receiver.

Note: In the early 80's I spent considerable time working with diplomatic spread spectrum bugging devices operating on frequencies between 20ghz and 56 ghz, using a 3ghz window.

Band Width Resolution and Filters
Examine the spectrum with the following BW resolutions/filters:
Utilize all BW resolutions/filters between 5hz - 200mhz (depending on band being checked)

For frequencies between 9khz and 7ghz I generally prefer to start with a 3mhz IFBW for a "moving" sweep, and to monitor the (wideband spectragram). This makes the energy easy to spot, but tough to identify. The IFBW is then modified until it is roughly 85% of the signal bandwidth, the results are then sent through a vector analyser for identification.

All IFBWs available on the analyser are also cycled through and the results overlayed into a matrix, a little vector analysis is applied, and the channel parameters are easily extracted.

To handle the microwave bands IFBWs between 10khz and 200mhz should be used.

Real World Example:
Frequency Hopping bug, randomly hops between 630mhz and 700mhz, a IFBW of 70mhz will allow the activity to be easily identified, but a narrower IFBW will make it much more difficult.

Hint: A programmable digital spectrum analyzer should be used!
(1/3/5/10/15/20/25/30/50/75/100/150/200... Sequence is prefered)

BW Res - Usage/Primary Function
100/200 mhz - Resonate Cavity Bugging Devices/SIGINT Devices
125/35/8mhz - Resonate Cavity Bugging Devices/SIGINT Devices

50/20/10mhz - Diplomatic/Intelligence Microwave Bugs
40/20/10mhz - Diplomatic/Intelligence Microwave Bugs

13/16/20mhz - Microwave Wideband
11/12/13mhz - Microwave Wideband
.5/1/2/5mhz - Microwave Wideband (Burst Bugs)
18/26/36mhz - Satellite Wideband (Video)
2/4/6/8 mhz - Microwave Wideband (Video)
3/6/12 mhz - Microwave Wideband (Video) - Common

.5/1/3 mhz - Microwave Wideband (Video/Burst/Pulse)

1.5/.75 khz - Frequency Hopping Bugs - VERY Common
.4/.2/.1khz - Frequency Hopping Bugs - VERY Common
3.2/6.4 khz - Frequency Hopping Bugs - VERY Common
10/20/25khz - Frequency Hopping Bugs - VERY Common
50/75 khz - Frequency Hopping Bugs - VERY Common
100/250 khz - Frequency Hopping Bugs
300/500 khz - Frequency Hopping Bugs
1/2/4/8 mhz - Frequency Hopping Bugs

300/250 khz - Regular Wide Band Broadcast FM
150 khz - Narrowband Broadcast FM Audio, Television Audio
280 khz - Narrowband Broadcast FM Audio, Television Audio

200/150 khz - Commercial Wireless Microphone - High Grade
150/100 khz - Commercial Wireless Microphone - Concert/Broadcast Grade
58/77/84khz - Commercial Wireless Microphone - Typical Body Wire
50/60/75khz - Commercial Wireless Microphone - Typical police device
8/25/50 khz - European/Japanese Industrial Bugging Devices

50/30 khz - Wideband FM two-way communications (ie: Cellular
Telephone)
16/15/6khz - Normal FM two-way communications
3/6/8/12khz - Narrowband Commercial - Voice
1/3.2/6khz - Narrowband (Marine, HF, etc...)

120/9/1 khz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/750/500hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
56/75/100hz - Narrowband (Bias Osc./Video Cameras/SIGINT)
30/150/200hz- Narrowband (Bias Osc./Video Cameras/SIGINT)
250/300 hz - Narrowband (Bias Osc./Video Cameras/SIGINT)

300/250 hz - Narrowband OOK/FSK/Data, etc...
300/250 hz - Narrowband OOK/FSK/Data, etc...

Subcarrier Detection:

10 - 500 khz - Most Commonly Used Subcarriers
30 - 150 khz - Typical Broadcast FM Subcarrier (FMSubC)
19/27/38 khz - Typical Stereo Broadcast FM Subcarrier (FMSubC)
67 khz - Typical Musicast/Musak Broadcast FM
Subcarrier (FMSubC)

2 - 10 mhz - Audio Subcarriers often used with Video
(4.2-8 mhz common)

5khz - 950khz - Realistic Subcarrier Threat (Audio)
1mhz - 15 mhz - Realistic Subcarrier Threat (Video)

Final Note

Beware of people in the TSCM industry who try to convince you that bugs
don't operate above 1ghz or 3ghz, the folks who push this line are utter

frauds, and are playing games with you.

Several "hole-in-the-wall" TSCM schools sell equipment (at highly inflated prices) and actively attempt to mislead students that all they have to do is spend $3000 to $5000 in equipment to enter the TSCM field.

Of course, these are the same crackpots who try to make you believe that they are the only electrical engineer, ex-CIA, ex FBI, etc... in the TSCM business.

Most of us want things we can't afford, but we don't go out and whine
about it to the world. The market price is aligned to what MOST people
will pay, just because you don't want to spend that much doesn't mean
the whole market is wrong, you're just too cheap to pay or too broke
to play.

>Radio Shack's PRO-2067 is DIN size..

The BC780XLT is "DIN-E" sized. Apparently, there are different sizes
that are considered "DIN", but "DIN-E" is the usual car stereo size.

The owners manual for the BC780XLT, which should have the exact
dimensions is at http://www.uniden.com/docs/service/pdf/BC780XLTom.pdf.
Unfortunately, that link is not responding right now or I would have
just posted the size.

>anymore unless you are out in the sticks where there is no digital coverage?

That's the reason. Analog signals have greater range vs digital signals of the same power. In rural areas, cell towers can be few and far between. With analog, you may at least be able to get a weak signal to/from the cell site. Digital is all or nothing.

People instinctively want what they cannot have. The prices being realized on eBay for cellular-capable scanners is a perfect example. I've seen clunky old Bearcat 200XLTs and Realistic PRO-34s going for as much as $200! (And the 200XLT doesn't even scan the cell band in the proper 30Khz steps!)

Tower Frequencies and Coms are breif but sometimes you catch something neat, also in the list is some other local frequencies and Orlando if you have a layover:

Safe trip.

Dulles Airport Tower
120.1
Approach 125.8
Approach 120.45
Approach 124.65
Approach 126.1
Departure 125.06

Dulles (Non-Air)
Fire Dept 164.825
Ground Control 415.125
Operations 166.0875
Police 165.500 and 165.7125
Security 169.2625 and 169.325

Air Freqs in/around Dulles

Pentagon Heloport 143.1

Washington National 119.1
WN Approach 120.75
WN Approach 118.3
WN Approach 119.85
WN Approach 124.7
WN Approach 124.2
WN Departure 118.9

WN Departure 121.05
WN Departure 125.65

ALL LOCATIONS:
Emergency Civil 121.5

Unicom Air: 122.75

Orlando Tower Air
118.45
124.3

Orlando Approach 119.4
120.15
121.1
124.8
125.55
134.05

Hope these help, if you find anything when there; drop a note when you get back.

Really? The 780XLT is 6-15/16" wide by 2-3/8" high. The usual "DIN-sized" car stereo has to fit through a hole just 2-1/8" high. No way can a 2-3/8" high chassis make it. If it's just the nosepiece that's that big, you might have a chance.

The actual difference between DIN-E and the same-sized-but-different-mount Japanese design (far better IMO) is not in the chassis size, but in the way it's mounted to the dash.

I am selling a YAESU FT-50 RD dual band HT, which has been modified
for extra TX and RX. The radio itself is MINT, and fully functional.

The following additional items come with this package :

*Rubber protector
*EDC5B cig lighter plug
*Yaesu ENB-41 9.6V 600 maH battery with spring clip
*MAHA MH-FNB-V47 7.2V 1800 maH batteru with spring clip
*MAHA MH-FNB-40H 7.2 V 600 maH SLIM battery
*Extra spring battery clip
*YAESU NC50 dual drop in charger with sleeves
*ADMS programming software with cable

$300.00 for everything, shipped

US Postal money order or personal check. When check clears, I ship.
Shipping will be via USPS Prioryt Mail, insured.

NO C.O.D., NO TRADES

E-mail if interested.

Message-ID: <y-o-y-23E499.13021519032001@news1.rdc2.pa.home.com>
Source record: 68283

i want to buy a laptop to use for scanning and gps mapping on the road. Where I am having problems is in using the Uniden BC780xlt scanner (using TrunkStar780 software) and an earthmate gps unit (using Delorme mapping software) but both devices need serial ports. I haven't been able to find a laptop with two serial ports.

What options do i have???

Thanks for any advice.

Andy

Buy a laptop with one serial port and at least one PCcard slot, and buy
one of these:

http://www.socketcom.com/siomp.htm

I have one. Works great.

why bitch and wine. yay. there are US models. Canadian models (always
unblocked) and euro models. if someone really wanted a scanner unblocked
they don't have to look far. It sounds to me that you want the 800 Mhz band
to beat off yourself to. that is what it sounds like to me. cause you say
it is rediculous to want one. but you do want one. and then you babble on
saying you can't explain why. .. are your palms hairy ?

stop complaining if you found a cheaper radio. canada it is 230 for a
canadian model unblocked. yay. take a valium or something.

1000. SSB Radio's to Trade

Newsgroup: rec.radio.scanner
Date: 2001-03-19 19:20:16 UTC
From: "S.J" <s1j3@hotmail.com>
Message-ID: <995m4kqlm1@plutonium.btinternet.com>
Source record: 68284

Hi
I have three SSB radio's that I no longer use, (TVI problems) They are a

1-President Lincoln, 26.000 to 30.000MHz, AM/FM/USB/LSB/CW, immaculate condition, boxed with all acssesories that came with it when it was new 4 months ago. If you go to this URL the radio I have is here, it is the EXPORT model.
http://www.cbshop.com/president_lincoln.htm

2-President George, as above except 26.065 to 28.755MHz this can be seen at
http://www.cbshop.com/president_george.htm
it is also boxed with accessories as new 9 months ago

3-Ranger TR296F-DX--26.000 to 30.000MHz. (modified).AM/FM/USB/LSB/CW excellent condition unmarked.See this one at
http://www.exportradios.com/radios/cb/texasranger/
it is about 7 months old
The three radio's are in immaculate unmarked condition and are working perfectly.

I am looking for a good base SCANNER, will trade either one, two, or all three for a good base unit. For all three it must be a top range base model
Will ship world-wide, (Air-Mail) I am in the UK.
Please e-mail if interested.
regards
S.J

Lots of owners of cordless phones think they are safe too. no one ever complained to the new about people listening to cordless phones. but. say for isntalce 46.610 Mhz. that is used by a channel on cordless + it is a HF/VHF toss up on what it is. since 50Mhz is vhf. anyways. you hear alot of US stations on there. but. as others have said. what is the point. no one owning a cordless could sue like a stupid cell company.

Hi
I have a 2month old Yupi MVT9000 Mark2 handheld scanner, coverage is from 0.530KHz to 2039.000MHz, the functions are far to many for this posting, for full specs and to view please look at
http://www.dlcwest.com/~dx.comm/products/mvt9000.htm

It comes boxed with unregistered warranty and proof of purchase receipt.
also has all accessories mentioned on the web-page above.
One thing, on the web-page the scanner pic shows it to be black, mine is a silver colour.
I would like to swap it for a BASE scanner must have switchable AM/FM etc and fairly modern and in good all round condition.
I am prepared to ship world-wide by air-mail
regards
Rob

Alltel has 2 cell towers within a 2 mile radius of me. They weren't even digital capable until fairly recently. Most traffic is still analog. Even digital phones talking to a digital tower will switch to analog mode if you aren't close to the tower. Many phones now being sold are digital, but as long as Wal-Mart is selling analog phones for $40, there will be plenty of analog traffic.

A what? THose exist for PS/2 ports. Not for serial.

>also most laptops would have a serial and USB port, so try and maybe find a
>USB to serial adapter

I tried those. The USB to serial adapters I could find are bulky (minimum size about that of a hockey puck), require drivers that don't ship with the OS, and also require you to find an outlet to plug in a wall wart... since USB doesn't provide the necessary positive/negative voltages to run EIA232, and the mfrs were too cheap to include the necessary DC/DC converter circuits.

Their drivers often also put the new serial port on "COM12" or some similar thing that a lot of older apps can't cope with (most serial-port-needing apps are limited to COM1 through COM4).

The PCcard adapter I suggested otoh "just works" with stock Win98/Win2K drivers, shows up as COM4, no external power is needed, and the form factor outside the laptop is just that of a serial connector. It is by far the better answer.

Hi group
I decided to buy the 2006 after all the good reports you sent me about it and I must say I find it very good indeed (btw, for those who asked I give
£70.00p
for it) I thought that was a good price.
Now to my next question, I read that the 2006 is known for the display fading away, is this bound to happen, if so how long does the display last before it needs replacing, or is this just a fault that occasionally occurs in some of the 2006's.
thank you all
Val

Yes...but apparently, it is seldom enforced. Otherwise, Canadian radio dealers
would not be placing display ads in U.S. publications (Pop Comm, etc.),
offering "full coverage scanners" with "guaranteed delivery to the U.S."

The only frequencies blocked on US Models is the Cellular Service Band, with little else other than Digital and some Telemetry in that area you would be missing nothing.

US Units are limited from these frequencies by law, therefore being illegal to import the older units fetch a higher price. It is a sellers market as you have seen.

As far as full potential; as noted above the only frequencies that are of any real use to most Hobby Scanners are the Cellular and that is highly over rated.

As for anyones fetish, most regular users of these boards could care less about cellular; if you read back through postings the main Posters asking about Cellular Mods or Frequencies are new users who know little about scanners to begin with and will often pay any price to get a unit like you type of.

Seems as though you have some idea of the content on those bands anyway.

As for extortion, its the seller who sets the price, if no one would pay it then the proces would come down.

BTW: Importing a Cellular Able Scanner is illegal, alibet most get through and the users often see that the extra price paid for that feature was not worth it and will try to recoup lost money via Ebay to new scanner users.

But I think you knew that anyway.

(Just a note, you make a good point but the language could use some squelch; kids use these boards too)

Do you hear anything when tuned into a digital transmission? Would you hear some sounds or is it just pure silence since the receiver doesn't recognize it?

> The only frequencies blocked on US Models is the Cellular Service Band, with
> little else other than Digital and some Telemetry in that area you would be
> missing nothing.
>

Yep, sounds like the drug market. It is terrible that we can compare a radio receiver with drugs.

> US Units are limited from these frequencies by law, therefore being illegal to
> import the older units fetch a higher price. It is a sellers market as you have
> seen.
>

Over rated for listening as a hobby, yes. But if you are interested in the science of the radio spectrum, and are doing experiments with your equipment, then this blocking is a roadblock to your persuit of learning.

> As far as full potential; as noted above the only frequencies that are of any
> real use to most Hobby Scanners are the Cellular and that is highly over rated.
>

Yep.

> As for anyones fetish, most regular users of these boards could care less about
> cellular; if you read back through postings the main Posters asking about
> Cellular Mods or Frequencies are new users who know little about scanners to
> begin with and will often pay any price to get a unit like you type of.
>

Not first hand, however I've read enough where I feel like I have. I have picked up tones and sounds in that range that I have been told are the cell towers. I found it quite fascinating just hearing these strange sounds and tuning around them. If you watch a TV's snow as well while tuning around it's interesting to see how it changes depending on what signal you tune to.

> Seems as though you have some idea of the content on those bands anyway.
>

Exactly my point, why would people be willing to pay over 60% over retail cost for a used illegal unit? (we know the answer btw, but it's not a good one)

> As for extortion, its the seller who sets the price, if no one would pay it
> then the proces would come down.
>

Yeah and I've had sellers contact me who appeared to do this as a business! Frankly the whole thing gives me the creeps. I wish the cell providers would just switch 100% to digital or use some encoding so we can get rid of that silly ban. It is so much more appealing to me to buy a full spectrum scanner that can't decode the cell conversations than buying a crippled scanner that has a gap in the covered spectrum. Besides, as I understand it the US version picks up cell images no problem. Maybe you don't get full signal strength, but I bet you could hear conversations. The government needs to learn about the word "prevention" and forget about "prohibition".

> BTW: Importing a Cellular Able Scanner is illegal, alibet most get through and
> the users often see that the extra price paid for that feature was not worth it
> and will try to recoup lost money via Ebay to new scanner users.
>
> But I think you knew that anyway.
>

:) I apologize. I felt like using a vulgar tone to spark some passionate debate. Thanks for the serious response though, I'm learning that the type of post I did does receive more responses, but most of them seem to be hostile and lacking any information.

> (Just a note, you make a good point but the language could use some squelch;
> kids use these boards too)

1029. FS:UNIDEN BC-9000XLT $350.00 OR BEST OFFER

Newsgroup: rec.radio.scanner
Date: 2001-03-20 00:53:04 UTC
From: Lustre1@webtv.net
Message-ID: <16114-3AB6A9F0-16@storefull-233.iap.bryant.webtv.net>
Source record: 68320

The Uniden Bearcat BC-9000XLT is a scanner offering great frequency coverage. This models covers virtually every frequency from 25 MHz to 1300 MHz (less cellular, although clear images are between 360~385MHz!). It receives military frequencies not found on most other scanners. You get 500 channels organized in 20 banks of 25 channels each. A VFO control (manual tuning knob) enables fast selection of memories or frequencies. TurboScan allows you to scan up to 100 channels per second and TurboSearch lets you select either 100 or 300 steps per second when searching VHF frequencies. The automatic store feature searches out active frequencies and automatically stores them for you in an available memory location.
Selectable mode allows you to change the default receiving mode (AM, FM-wide or FM-narrow) to hear all the action. You can also change the default step sizes!
Advanced features include: Two Line Alpha LCD, allows you to label your frequencies, i.e.; "Detroit Police", Delay Key (2 seconds), Channel Lockout, Data Skip (the scanner skips over non-voice channels), Backlight Dimmer, High Cut Audio Filter and tape recorder activation.
External jacks include: BNC antenna, external speaker, line out, aux jack and DC power. The BC9000XLT comes with: AC adapter, telescopic antenna and Owner's Manual. Size: 10.5x3.5x7.375 inches. Frequencies: 25-550 MHz,
760-824 MHz, 849-869 MHz, 894-1300 MHz!
Includes Uniden's optional CTCSS tone decoder board, installed!!!
Like new condition, complete with A.C. Power Pack, Antenna, Original Box, User Manual, etc.
Note: This scanner has been discontinued by Uniden, and to the best of my knowledge, distributors stocks have been depleted.
$350.00, including shipping within U.S., lower 48 states.
John English retired marine!

While you could have avoided insulting people you don't even know, I understand what you mean about the units being crippled. A full receive R2 is listed at $220 INCLUDING overseas shipping at www.bander.com. Stop complaining and just buy one there.

Hi there,
I am looking for a near mint condition BC-200XLT
I am not concerned about the battery if it hold a good charge or not as long as the radio its self is in excellent condition, no scratches or marks on display or case.
If you have one you would like to sell please e-mail me directly with your asking price and any other details.
Thanks-Russ

It isn't the display itself, but rather the green backlight that
gradually dims. It will happen in all of them, and it's simply a
matter of run time.

Switching the backlight off when you don't need it will extend its'
life.

Mark

The truth as I perceive it to be.
Your perception may be different.

That is one of the few you can get at the uniden online site, it is in pdf format, you will need adobe acrobat reader to open it up, if you don't have it already, just click on the adobe icon and quickly install it.

Here is where you go:

Hello to all, i hope this will also be of some help. I also have a PRO-92 which i really like. I had the same trouble and it sounds to me, from what i`ve read of your post, that you may be dealing with the trunktracker bug. Simply explaned, this issue relates to the scanner`s abillty to properly track systems in the Motorla (MOT) mode. The bug causes the unit to ether not track them at all or not properly track these systems. In the case of mine, it caused the unit to not track ANY trunked systems at all. The remedy, unfourtunatly, is to send the thing back to Radio Shack to have the issue repaired, if the unit`s still under warranty, it`ll cost nothing, if not then it`ll cost the price of labor, in my case about $50. I hope this solves your problem, good luck. AEM

See price reduction on this package below :

I am selling a YAESU FT-50 RD dual band HT, which has been modified
for extra TX and RX. The radio itself is MINT, and fully functional.

The following additional items come with this package :

*Rubber protector
*EDC5B cig lighter plug
*Yaesu ENB-41 9.6V 600 maH battery with spring clip
*MAHA MH-FNB-V47 7.2V 1800 maH batteru with spring clip
*MAHA MH-FNB-40H 7.2 V 600 maH SLIM battery
*Extra spring battery clip
*YAESU NC50 dual drop in charger with sleeves
*ADMS programming software with cable

$250.00 for everything, shipped, FIRM

US Postal money order or personal check. When check clears, I ship.
Shipping will be via USPS Prioryt Mail, insured.

NO C.O.D., NO TRADES

E-mail if interested.

Dan

hmm. I am from canada. and unless a person is in their teens. cell conversations get very boring. who cares how that guy did that girl. or who sold a 8 ball to whom. if it is a stranger. what is the point. better to lsiten to your friends or something. especially if she is a pretty girl that thinks you are cute. but. In the part of canada I am from. western. it is pretty boring after awhile. If i remember from a source that installs the cell towers out here. Digital ones will be up now in about a year. that is for the smaller areas though. each one that telus or cantel puts up is only a $30 000 digital repeater. they are rich. then in these smaller communities it will be more boring. except pay as you go phones.

Dev

> well cell phones are not that boring here in canada and i would think the

I was just wondering what everyone thought of these radios? I know
they're not the newest and the greatest, but for what little I know of
them, they seemed to include little extra features that most others in
it's time didn't. How were they performance-wise?
Thanks

when did Maricopa County Arizona (includes Phoenix) switch over to an
800mhz system. I know the Maricopa County Jail has an 800mhz system
(856-860.2375) and some of the outehr county agencies were on a system
that uses frequencies in the 856. 857, 858, 859, 860, 866,867, and 868mhz
ranges.
The Sheriff still used 460.05, 460.1, 460.2 for a good while

Recently I had to call the sheriff to help me find my girlfriend, she got
her pickup stuck in an irrgation ditch but did not know where..

the deputy was telling me that they can't be scanned...

I have now heard some sheriff traffic sprinkled in with the other county
traffic on the 30 channel coiunty trunked system. The jail and probation
people still have a seperate system.

when did the switch take place and what will become of the 460mhz
frequencies ??

I see that you are one of those people that need to have
something that tells you what you can and cannot do.

"It" doesn't have to say so. The Constitution tells the
government what to do, not the people. In fact there is
no statute that tells the people what they should or must
do.

The people may do whatever is lawful. The presumption of
responsibility is for the people to have sufficient
knowledge to guard themselves and direct their government.

If this means monitoring certain communications and
movements of the government, so be it.

Message-ID: <01c0b125$cb0ce4a0$35cc60cf@rado>
Source record: 68341

Hi guys,
Does anybody knows if it's normal that my PRO34 scanner don't search between two limit (hi-lo) around 49MHz. If I do a search on another range, like 155.000MHz, there is no problem. When I try to enter a HI limit of 49MHz and a LO limit of 50MHz, the display show an error message??? Even after a main reset of the unit.

any help would be appreciated.

Thanks

C Tremblay

And how long does it take to cut through your state's red tape to get a
request processed? FOIAs are barely worth the paper they're written on.

>Reread you comment about their off color jokes, behavior that is further proof
>that cops are not our friends. They already have the us vs them mind set and
>nothing is going to cahnge that.

You cannot regulate an officer's thoughts or mind set. We can and do
regulate how the officer works with the community as well as how the
officer performs on the job. Officers that can not adjust to the way
we want policing done here don't usually last long.

>High school jokes withbadges, guns and the
>"forde of law" to back up their criminal activity.
>At the risk of repeating myself, never, ever trust a cop.
>They are the only legal organised crime gang in the USA.
>Rampart is only the tip of an ugly iceberg.
>Every smart cop want "secure" comms so they can hide their activites from
>their communities.

We don't rely on the communities to locate bad cops. We do a good job
of that ourselves.

>Cops do not want civilian review and control.
>Every cop I have known has admited that they know who the "bad apples" are.
>And admit that they are unwilling to end thier carrier to stop the abuse.

Here it ends your career if you are caught covering up abuse.

>If you are a LEO, and if you are honest with us,don't you know which fellow

1058. FS:UNIDEN BC-9000XLT $250.00

Newsgroup: rec.radio.scanner
Date: 2001-03-20 15:33:56 UTC
From: Lustre1@webtv.net
Message-ID: <3454-3AB77864-89@storefull-238.iap.bryant.webtv.net>
Source record: 68197

The Uniden Bearcat BC-9000XLT is a scanner offering great frequency coverage. This models covers virtually every frequency from 25 MHz to 1300 MHz (less cellular, although clear images are between 360~385MHz!). It receives military frequencies not found on most other scanners. You get 500 channels organized in 20 banks of 25 channels each. A VFO control (manual tuning knob) enables fast selection of memories or frequencies. TurboScan allows you to scan up to 100 channels per second and TurboSearch lets you select either 100 or 300 steps per second when searching VHF frequencies. The automatic store feature searches out active frequencies and automatically stores them for you in an available memory location.
Selectable mode allows you to change the default receiving mode (AM, FM-wide or FM-narrow) to hear all the action. You can also change the default step sizes!
Advanced features include: Two Line Alpha LCD, allows you to label your frequencies, i.e.; "Detroit Police", Delay Key (2 seconds), Channel Lockout, Data Skip (the scanner skips over non-voice channels), Backlight Dimmer, High Cut Audio Filter and tape recorder activation.
External jacks include: BNC antenna, external speaker, line out, aux jack and DC power. The BC9000XLT comes with: AC adapter, telescopic antenna and Owner's Manual. Size: 10.5x3.5x7.375 inches. Frequencies: 25-550 MHz,
760-824 MHz, 849-869 MHz, 894-1300 MHz!
Includes Uniden's optional CTCSS tone decoder board, installed!!! Like new condition, complete with A.C. Power Pack, Antenna, Original Box, User Manual, etc.
Note: This scanner has been discontinued by Uniden, and to the best of my knowledge, distributors stocks have been depleted. $250.00, including shipping within U.S., lower 48 states. John English

all depends what you want to do with it. First of all. Take off your
battery. Look on the little white tag. the one that tells you the ESN and
serial # and stuff. if you see EE3 anywhere on it. there is no point in even
putting it in that mode. that is for all phones part of 95 and newer.

OK...

The flip phone is older Motorola model F09HLD8346AG - Channel
832/2412... NO EE3 anywhere on the phone.

What test mode function are available?

>Thanks

Having had one from new when you either had an SX200 Rx scanner or you
didn't have an Rx scanner, they're ok so long as you realise they have
a severe IF image problem. eg You'll hear some very interesting stuff
on the amateur 70cms band but it's not really there it's the image
you'll hear.

Because of this poor image problem my Sx200 is now relegated to being
an RF signal generator, at which it's very good and stable.

"Whatever is lawful" is another way of saying "Whatever we deem is ok for you" or another way of putting it is "Whatever we give you permission to do".
Who is "we" and what authority have they been given and by who?
Something is wrong with the whole system if some old worn out cronie on a supreme court seat
or the group of old cronies who could give a crap about "we the people" in the senate and care
more about their golf and how they appear in their fancy speeches to their fellow house members
and these goons are deciding what we can and cant do.
All I did was be born here. I owe nobody nothing. Nobody has done anything for me so why do they think I owe them something including submitting to an authority that doesn't exist except by
weapons and threat of death. No wonder that guy said "Give me liberty or give me death". Now I
understand fully.

Not true of the above.

>Their drivers often also put the new serial port on "COM12" or some
>similar thing that a lot of older apps can't cope with (most
>serial-port-needing apps are limited to COM1 through COM4).

Is true of the above.

Some far haven't had any luck getting the UC232A to work on Win2K, but
I've only tried one mobile phone app so far, not any "proper" serial
comms, so YMMV.

>The PCcard adapter I suggested otoh "just works" with stock Win98/Win2K
>drivers, shows up as COM4, no external power is needed, and the form

In many locations the LEOs use etra-departmental, or "supplamentel" comms. Like cell phones, PCS, FRS, Ham Radio, unlicensed business band, and even CB. Given that I monitored a fair samp[ling of thes un-official comms, I can assure you that in Cincinatti, Dayton, ft wayne, Indianopolis, Ashville, Knoxville, Atlanta, the list is way to long to list, that the comms had nothing to do with legitimate law inforcement. A lot to do with getting stories straight, placing bets (for some reason this is really big in Ohio only heard this one there), several cases of cops buying drugs. For personal use. HEard cell phone call where an officer made it clear to his wifes divorce attourny, lover ,family that people where "going to die". I was olny in the places on a near random intervals, my former job took me all over the south and for a faithfull, non drinking man, that HATES tv, scanning and SWL was the oly thing to do. Lots of time to listen and fogure out how each hell hole operated. I used to have all the results, ie in which town what form of bypass comms did the police use. If theose in charge really wnated to get a hnadle on "Whats happening?" they would outlaw, bar, make an imediate terminatin offense to use "non-official" comms for any official worrk. In many, many towns I have heard the officers use cell phones. Most cops know that the official comms are monitored and recorded. (except for "mobile extenders that allow car to car, simplex, non repeatered comms) And will go to great lengths to aboid talking over their "police radios", but even on the official radios there are lots of of "bad", ie illegal, comms. If any civil rights attourny wants to nail most "racial profilling" all they have to do is get the tapes.

>Yes I am a LEO. We take action when abuse is discovered. We expect
>our officers to obey the law. I don't have any tolerance for
>dishonest or unethical officers.
I trust you and have no reaon to doubt you. I envy the community that you live/work in. Being on the road so much, and monitoring all the while, I have heard many "thugs". bullies laughing about pushing people around. And I have had more than my fair share of "traffic stops". In a state or federal vehical. Always with speed control, never was in a hurry. As an "mustang" engineer, who has worked with many electronics systems, I have some real doubt about the

average cops ability to use RADAR (microwave X/Ka etc) accuratly, I have seen too many police officers runing radar in no-no places(deep cut throughs, bridges etc) and attribute some of the problem to bad training and misuse of equipment. So some is just honest over zeal. {LIDAR is hard to make mistakes with!} But I have been stopped by many un-polite "officers". Non of whom ever thought to see if I had a recorder. I used to entertain fellow cow-orkers by playing the tapes back. Never got a ticket, always smiled and was polite even to the most thugish officers. Got lots of warnings "to keep it slow", when I was the slowest thing on the highway. got stoped once in Atlanta and was threatened with arrest if I did not keep up with the flow of traffic. Since it was my last trip I smile, said ok, and took off. Called 911, played the tape back to the dipatcher and offered to play it back over several of the Atlanta Ham repeaters. Officer idiot keyed his lights, whipped around me and gave me a rod, with the reddest face I have ever seen. But I suspect he is still a cop.
Our experiences differ. I know of too many cases where the cops, prosecuter etc go light or ignore infractions by the soicla elite, but hammer the powerless. Perhaps my own families tragidies have embittered me a little. But I had already lost respect of the law and its menions before I found out that a well respected member of the central Ky "society set" liked little boys. And that the police knew about it for at least 10 years before he raped my youngest son. The SOB is dead (after a long painfull bout with AIDS), and it would only hurt the other young men who were powerless to protect themselves. But our experience is not rare. I have several friends, from widely differening geographic areas, that had similar stories. Of young firls raped by "prominent' men, and nothing happened. Of politicians who drive so blind drunk that they kill people. Two examples, both from Ky.In Northern Ky Pete Worthoigton had a head on collison and killed a young mother, the fact that he was the local state representative had nothing to do with the local/state PD failing to ever arrest him. so he and another died" In Lexington a former Coach was fond of drive while blitzed. After a few wrecks, even the local police accepted they had to stop this. But the mayor forbade it. So they had the KSP do the bust. Coach was gone in three days. But the sad part is the local cops knew he had a bad drinking and driving problem over a year befroe even they even tried to arrest him. Thye were just lucky that he killed no one in the mean time. Because I had tapes of their cell calls(this was Pre ECPA) and would have given them to the victums family.

Good luck and stay safe.
And may you always know right from wrong and act appropriatly.

Hi All,

I just acquired a Pro 92 B (Ver 3.28). I need to know some things that are not spelled out in the owners manual. My local police system has 3 sites with 10 channels in each. Can I program all into the same bank that is 3 control channels in a bank? Also how do I just listen to on talk group in a bank, like if I just want to listen to my district TG, do I have to lock out all other TG's? I would also like to mention that I don't find the sensitivity very good and there is also a hissing in the background in all bands anyone know where there is a fix for this on the web? Remove spam deterrent if replying to my address.

Thanks, Joe

Hi there,
I am looking for a near mint condition BC-200XLT
the radio "must be in excellent condition", no scratches or
marks on display or case.
If you have one you would like to sell please e-mail me directly with
your asking price and any other details.
How well does the battery hold its charge?
Is battery fit tight with radio?
Thanks-Russ

Drug runners grow fearless along border

Mark Shaffer
The Arizona Republic
Mar. 19, 2001

When Tombstone Marshal Paul Kostellic comes to work and switches on the radio, he needs both a translator and an encryption specialist.

That's because Mexican drug traffickers have figured out how to tap into his department's new, high-tech radio relay system and are using the police band at will for their communications.

"There's more chatter this morning by narcos than by our own officers," Kostellic said one day last week.

Using police bands in southern Arizona is just one example of how criminal organizations around Agua Prieta, Sonora, just south of Douglas, are becoming increasingly fearless in their efforts to move drugs across the border.

Seven times in the past five months, vehicles loaded with drugs have sped northbound past the Douglas port of entry into oncoming southbound traffic.

In addition, drug cargoes captured recently are about twice as large as those of the past.

Officials attribute these moves to stepped-up law enforcement along the border.

The primary smuggling routes have moved to more isolated areas such as the Peloncillo Mountains near the Arizona and New Mexico state line; the border with the Mexican state of Chihuahua; and in the Coronado National Forest between Sierra Vista and Nogales.

"What we are seeing here is the effect of having 1,600 Border Patrol agents," said Lee Morgan, lead criminal investigator for U.S. Customs in southeast Arizona.

"It's forced the dope smugglers into the mountains and desert and into desperate measures if they stay in town. But they always have a lot of time to think about things like, 'Why not crash the port against traffic during high-traffic times?' " Morgan said.

Douglas Mayor Ray Borane said it's an appalling trend.

"We've already had one of the drug vans smash into a tourist car going south," Borane said. "I have a feeling that if the drug interdiction effort continues at this level, this problem could get worse and worse."

Jimmy Tong, Customs port director in Douglas, said law enforcement officers recently captured four of the seven smugglers who drove in the opposite lanes of traffic. Security against the wrong-lane intrusions has been hampered because the Customs Service is building an inspection booth for southbound traffic, Tong said.

In two of the cases, a 15-year-old Agua Prieta male was driving the drug vehicles. In the first, he lost control of his vehicle and smashed into a desert arroyo just north of the border. The teenager was thought to have suffered spinal and other injuries after an air bag activated, and officials decided not to prosecute the youth.

Ten days later, the same teen was arrested after another port-running incident in the same fashion, Morgan said, and was prosecuted.

"In all but one of the cases, we believe that marijuana was involved," Tong said. "Before, in our normal stops, we would take 30 to 50 pounds of marijuana, and now the average is 80 to 100 pounds or more."

Officials say fewer loads are being smuggled across, but those loads are much larger.

According to Border Patrol statistics, nearly 108,000 pounds of marijuana have been seized in southeast Arizona this fiscal year, which began Oct. 1, a 3 percent decline from the same period last fiscal year.

Cochise County sheriff's deputies also have made two of their largest seizures in vehicles since the beginning of the year, with more than a ton of marijuana in each, spokeswoman Carol Capas said.

"We're thinking that there may be some new drug organizations entering this market," Tong said.

That thinking was reinforced last week when a joint operation of U.S. Customs and Mexican police seized an airplane carrying nearly 800 pounds of marijuana 15 miles south of Nogales, Sonora.

The drug traffickers also once used their own radio-transmitting equipment.

That began changing four years ago, when the Federal Communications Commission closed a monitoring station it had operated in Douglas, said Al Haines, a microwave engineer for Cochise County.

Haines has sent letters to Sen. John McCain, R-Ariz., among others, trying to get about $3 million to purchase a secure communications trunk system for the county.

"That (FCC closure) left Tombstone police, especially, in a bad situation as it turned out," Haines said. "We installed more sophisticated equipment for them a few months ago, but we are always left with the problem of the strongest signal capturing the receiver."

"Mexico has really been cranking up the wattage on the new towers down there, and it's easy to see why we have so much interference. We've recovered radio equipment from some of our recent stops of drug smugglers that is more advanced than ours," Capas said.

All of which is no surprise to Kostellic, Tombstone's top cop.

"Every time we take one step with technology into the future, it seems like those people take two steps."

1095. FS: PRO-2052 with Software

Newsgroup: rec.radio.scanner
Date: 2001-03-21 04:15:17 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <pVVt6.183027$bb.1711516@news1.rdc1.tx.home.com>
Source record: 68233

For Sale: RadioShack PRO-2052 Dual-Trunking Scanner with Winscan Software.

The scanner's frequency coverage:
- 29-54 MHz
- 108-174 MHz
- 179.75-512 MHz
- 806-956 MHz (except for cellular)
- 1240-1300 MHz

The computer is computer controllable. It has a RS-232c serial interface for connection to a personal computer. Included with the radio is the Winscan 1.0 software (Original CD-ROM, not a copy).

Other features of this radio include SAME weather decoding, Data Skip, and 20 priority channels.

Everything is in like new condition. Includes original boxes and owner's manual.
I would like $200 for this radio and software. I will ship to any location in the United States by UPS at no additional cost. If you want shipping by air, then that can be worked out.

I prefer to accept payments through the PayPal system, but I'm flexible.

Here is one not on the list that I have been trying to identify - "Silver Streak". I heard them calling Quad Cities (Moline, Davenport, Rock Island and Bettendorf) in the mid afternoon of 2/23 on 131.3500, but haven't matched an airline with the ID.

On the other hand, I had one and it worked just fine. I didn't use it on an outdoor antenna, and it still did a nice job on airband and police. I had no particular image problems with mine.
I liked the way it was built and it had good audio.
Certainly not complete with today's bells and whistles, but a nice scanner nonetheless.

Well we will all get right on that for you!! We'll all compile as much research data as we can, have it printed in color for you at Kinko's, and have a courier deliver that to you ASAP!!

No better yet, I'll have someone from Uniden and reps from all the scanner manfactures come do a presentation at your house. That way they can all fight for your business while you eat grapefruit in your bath robe!

Is there anything else we can do for you so you won't have to do anything yourself?

why not go over to http://www.strongsignals.com
and do it your LaZy self....u got to be ego-mommy.

the site will educate you. you need it.

putz.

attitude guy

second thought: it could be a .NET at end .... try both.
do some work.

1108. marine radio

Newsgroup: rec.radio.scanner
Date: 2001-03-21 05:57:16 UTC
From: inter1097@aol.com
Message-ID: <20010321005716.06320.00000177@ng-ff1.aol.com>
Source record: 68147

Hello, I was wondering if I need to live near a lake, ocean to hear ship to shore or ship to ship stations. I live in Notrh-eastern Ohio, Fairly close Lake Erie but whenever I scan the marine band, I only hear the coast guard on ch 22 and a recored message like every hour or so on Commercial CH 86(the same one all the time) .

are there particular ship to shore and ship to ship channels/freqs with more traffic than others? About how many watts does the average marine radio use?

Thanks for your help.

Tony

1109. JIL SX-200 programming

Newsgroup: rec.radio.scanner
Date: 2001-03-21 06:08:37 UTC
From: w9wi@linux1.localdomain
Message-ID: <slrn9bghgc.8op.w9wi@linux1.localdomain>
Source record: 68148

I rescued an old JIL SX-200 from the dumpster at work a couple of years back.. No instructions. I can figure out how to manually enter a frequency, but not how to assign it to a memory. Anyone know how? Or where I might find operating instructions for this unit? (I would be utterly delighted if someone could point me to a schematic diagram too, I'm trying to stuff a deviation meter into this thing..)

Thanks!

not the fanciest software around, but works
just fine.... takes a little getting use to (but
what software doesn't)

I think it was a bit over priced..... but when I bought mine was the ONLY (and
maybe
still is) game in town.

Pro: It works great. con: the manual is not at good. Pro: it trunks and scans at the same time. con: It won't do Priority mode for conventional while in Trunk mode. A con that I have noticed Trunking an EDACS system, when talkgroup conversation ends it won't pick up on another very well (at least in mid conversation) you can hit scan to move it along. There is talk about dropping an aquire on the control channel then hunting for it again, I haven't noticed that being a big problem on mine.
2. plug in a search on BC780XLT; there is already a lot of info out there...

Yeah, I thought that was pretty funny.

But...it makes sense, in a Sun Tzu sort of way.

Use your opponent's resources (relay towers) against him.

Here is a link to US/Canadian Marine Service Frequencies with uses:
http://expage.com/pbscanner6

Much of the Commercial Radio Traffic is on HF, outside most scanners range.

You will get more on the Marine Bands the closer to where the traffic is.

Channel 22 (22A) is mostly used by the USCG for Advisory Traffic,
Channel 16 is the Calling/Distress Channel

Channel 86 is often used as a Phone Patch for the Marine Operator, the
recording is oft played over the call to keep them "private".

Handheld units are 5 Watt though Mounted Units can push much more with an Amp;
often used to push range.

Most traffic will start on 16 then quickly move to another, each area of the US
use close channels operations but not always.

A well mounted Marine Band Antenna will help you get those communications.

Marine Bands are also used by Land Mobile Services that are more than 50+ miles
from shore (possibly more).

Try the link to PB Scanner under MARINE for the list.

Hope this helps.

I have one here that I was fortunate enough to try out.It is a neat unit but too costly for what it is.I was going to buy one but decided against it.You can pick up TV,CCCameras(security cameras)and a lot of nice stuff if you want to snoop around.I am going to return this item back tomorrow to the person who loaned it to me.He wants to sell it for $425.00.So if interested,drop me a line in the email.My email is: n1rsp@hotmail.com
I will forward any interested offers to him.Thanks

Hope this is the right group to ask, if not please point me in the right direction.

I am searching for a 4 level FSK Decoder interface to connect between my scanner and computer to decode FLEX pager protocol.
I have seen the one at Texas 2-Way. Anybody here know how well that one works and wondering if there are any other decoders available. TIA!!!

Cheers!!

Rob

There is a group for the scanner:
www.onelist.com/community/UnidenBC780XLT

I am new to scanning myself, however just about everyone told me its one of the best. A few little usability quirks, which don't affect me as a "novice", but I've never heard anyone complain about its technical capabilities, although some have said the antenna it comes with could be better.

I have for auction a Standard C5718 2/440 mobile radio. It contains the upgraded memory module to give you 200 channels total. Includes the power cord and instruction manual. This radio has been modified and has the latest updates from Matt Adrian who is an authorized repair center for Standard radio. Standard radios are one of the best built amateur radios and unfortunately are no longer sold here in the states.

first of all, Flex is illegal to decode in the US. but not in europe or canada. why not build your own. you can search for schematics in yahoo or another search engine. Exactly what you typed will work. you just got to remember the power suply needs a -9 to 12 volts. a ground. and a + 9 to 12 volts.

it is the laptops that are in most of the BC cop cars. they are connected to a modified cell phone on a analog transmission. to a dedicated cell frequency. they do most communications over that laptop. unless something that needs urgent attention needs to be dispatched. but you would know if your town has it or not. cause you will hear the dispatch say 10-71 a 10-72 bravo 3. + I think if I remember what a fellow ham told me. that van went to trunking too.

if you are talking about the 900 Mhz cordless frequencies. You got to remember that all scanners would not be allowed to be sold if there was no ham frequencies. I forget what place I talked to about it. it was either Uniden or ICOM. a scanner has to have at least be able to receive two ham bands to be sold. 900 - 928 is allocated to be a ham band too. so if we block out 900 - 928. then we are blocking a ham band out too. if you are talking about 43 - 47 Mhz. who knows. but if you lok at even the old scanners. they usually received 50 - 54 Mhz or 144-148 Mhz or 430 to 450 Mhz. I wish I remembered where I talk o someone about it. i didn't 100% beleive the manufaturer when I talked to them. did a search and found out it was 98% true.

Several are out there, as well as the programs to decode, everyone touts theirs as the best; never had one myself but have seen a few running; what a mess to work is all I could think.

A quick search on Dogpile may close this search to what you want.

Try the UK Scanner sites possibly more there on this.

>From: "N9NWO" n9nwo@amsat.org

>When Tombstone Marshal Paul Kostellic comes to work and switches on the
>radio, he needs both a translator and an encryption specialist.

Funny to me that they would not PL Protect frequencies.

And why would someone working that area not know Spanish?

One more; If its encrypted.....

>That's because Mexican drug traffickers have figured out how to tap into his
>department's new, high-tech radio relay system and are using the police band
>at will for their communications.

Still wondering if and why they would do this...

>The drug traffickers also once used their own radio-transmitting equipment.

Nothing new here, thats why the NSA has monitoring posts all over the world.

>That began changing four years ago, when the Federal Communications
>Commission closed a monitoring station it had operated in Douglas,

Well we see the result of that in this post.

>Haines has sent letters to Sen. John McCain, R-Ariz., among others, trying
>to get about $3 million to purchase a secure communications trunk system for
>the county.
>

Well with a PL Protected system that would be a start. No such thing as a
SECURE System though, close but nothing is 100% when it comes to radio
communications.

>We installed more sophisticated equipment for
>them a few months ago, but we are always left with the problem of the
>strongest signal capturing the receiver."

Thus the nature of cheap equipment and the nature of radio waves.

>We've
>recovered radio equipment from some of our recent stops of drug smugglers
>that is more advanced than ours," Capas said.

Because they have more $$$ to get them direct.

Its a war, lets put some effort into it.

Nice job Dwayne, I agree with you! I think that maybe he just wanted our recommendations as opposed to the columnists that get paid everyday to review items for 15 mins and then make a recommendation on it, unlike us who play with our toys daily and know more of the Pros and Cons of the item.

Dev,

It was regarding the 43-50mhz cordless freqs.

The day I bought my first scanner in 1996 (Pro-26), I yanked every
cordless phone!

Best regards,

Andy B

I hear more and more comms asking to send on nextel. It makes me wonder about the lifespan of digital public service communications equipment.

I have two nextel i2000s so I understand the nature of the beast and it's benefits.

I only wish my local PD's would add me to the 2-way.

[sigh]

Regards,

Andy B

: Just out of curiosity, what does this have to do with amateur radio?

Couple of reasons. 1) we may be asked to track, or DF, them.
The US Army has limited Signal Intelligence assests.

2) we may see those in law enforcement blame us. There is
an attitude in the US that blames the technology thus wants
to ban it instead of controlling people. Sort of a Luddite mentality.

3) Our repeaters and frequencies are being used by drug smugglers
and those engaged in espionage against the US.

Not sure what you already currently monitor, but there have been some
changes in their FCC record in the last few months...
Also try these frequencies, if you don't already:
151.34
154.34
155.73
155.385
151.01

Link to FCC site-

[snip]

Actually, even without software and cable, a good spg file can be of
use.

Download 92ware (there's a link to it at www.pro-92.com) and use
"spgasc.exe" to convert it to text.

You can browse through it, see the frequencies, and see how it was set
up.

I bought the BC780XLT last week. I like the size and the audio isn't bad with an external speaker. The manual isn't clear IF YOU ARE NEW TO TRUNKING, and if you know how trunking works, it's o.k. If you are new to scanning, I wouldn't recommend getting this first, unless you have the money to spend. Also, the 780 needs to be programmed via a PC. You'd go crazy setting alpha tags for 500 channels (max). The Winscan780 PC control software for this radio is slick. I downloaded the demo version and went for the registered copy right away - can't wait till it arrives. Pozilla did a great job on the software. Check www.bc780xlt.com for other opinions.

I need to use mine more before I form a real opinion. My other scanner is a RS Pro-2042, and I wouldn't give that up even if it doesn't trunk-track, but it has features that even the 780 doesn't have such as sorting of frequencies.

> northbound past the Douglas port of entry
> into oncoming southbound traffic.

As bad as this is, I think we're focusing way too much on vehicles moving drugs across the border. If you think about it, it would take dozens of these vehicles moving across the border each day just to supply enough drugs to supply a single large city (look at the amount of drugs used daily by each drug user and the number of drugs users in each city).

Therefore, if we look at the number of large cities, and add in the even much greater number of small towns or communities, it is clear that hundreds, even thousands, of these vehicles would be needed each day to meet the demand.

Since it is obvious that not even close to that number of vehicle drug shipments are coming across the border each day, then most of the drugs have to be getting into this country some other way. Even the number of private boats sneaking drugs in, or the number of people bringing drugs in through airports, cannot account for more than a small percentage of the total drugs (even when added to the vehicles coming across the border).

So where are most of the drugs coming from? I suspect the lion share is being shipped in by some of the largest corporations in this country. Only these largest corporations have the import shipping volume necessary to hide the huge amount of drugs needed to supply this country each day. And only these corporations have the means to hide the huge profits involved (and you wondered where all the money to finance all those corporate mergers was coming from).

In addition, only these largest corporations have the means to move this amount of drugs around the country (truckloads to each major city). And finally, only the largest corporations have the means to hide the huge bribes necessary to cause law enforcement, and politicians, in this country

to ignore all this illegal activity.

So, in the end, if we really want to cut the drug supply, we should stop wasting so much effort chasing small-time hoods running drugs across the border. Stay after these small-time hoods, but instead focus our main law enforcement efforts at searching every single box in those corporate-owned crates shipped in from overseas through the ports of this country. And, if necessary, we should be prepared to use the military to search if the federal agencies can't muster the necessary manpower.

If we did this, I suspect some of the richest corporate people in American would have a lot of explaining to do before a judge. And I also think the drug supply in this country would be reduced dramatically.

Local law enforcement does not have an form of signal intelligence,
to include DFing. And the federal assets usually do not show up to
help local authorities. So the local cops use hams to local folks who
jam their frequencies. But the cops do the actual criminal contact.

: > 3) Our repeaters and frequencies are being used by drug smugglers
: > and those engaged in espionage against the US.
:
: Do you have some evidence in support of this rather remarkable assertion?

We are seeing the drug runners using ham equipment, both HF and VHF HTs,
to coordinate their activities. This is mostly happening along the border.

And we have spotted number stations, these are transmissions that consist
of nothing but numbers and are usually transmitted in CW mode, working
within the US. Several have been heard in the Chicago area and along the
toll road in northern Indiana. From what friends have said, it sounds like
mobiles as they overload your radio if you get near them. Such spottings
have been reported to the FBI, naturally.

I've had both and the 245 (IMHO) is the better Trunk Tracker. I do
miss the alpha tags though. I had the same problem you're describing.
I put the 92b up to the side by side test with the 245 and the Unden
radio was superior.

All of the FDNY digital radio were recalled yesterday and the old VHF radios were reactivated, this after just one week in service. There were numerous mishaps and the icing on the cake was a firfighter in the basement who's air bottle had run out and he had become lost...when he placed a mayday call no one heard him.

If we did this, we would no longer be living in a free democratic constitutional republic. The United States would be something new (or something old) - a totalitarian police state with military law enforcement.

And there would still be drugs....

If corruption of the government is part of the problem, then why would you expect giving the government more power over the situation to help make things any better?

There is a big qualitative difference between DFing police radio jammers and helping to find drug runners. Police jammers tend to be non-violent.

Hi everyone,

I'm looking for an OLD radio shack scanner. The first of the PRO line. The PRO-1. I'm looking for one that is in working condition, and in good to excellent shape. I know if anyone has one in this condition it because they are collecting it and won't part with it, but I thought I'd give it a shot anyway. If anyone has one of these scanners, please reply. You'll need to take the _NOSPAM_ out of my email address for it to get to me. my email w/o the spam deterant is ssybert@airvananet.com
Thanks.
Scott.

Well, unless you know someone in Nextel Programming department, then you can have him/her add you, but the only problem with that is that employees sign confidential agreements with Nextel and if caught you would be fired on the spot. Secondly, all federal, county, and local Law Enforcement review any add-on and delete to their groups. So they get a montly report. Yes, there are was around this, but I'm definetly not at liberty to say.

The hobby is getting tuff to monitor, but hopefully we can still be able to monitor our favorite freqs in the future!

I have a Pro2042 with the OptoElectronics OS535 installed. This 535 can be unlocked for 800 mhz freqs.

Along with this package comes Probe 5.0 software.

This combination makes a very powerful search and scanning package.

I have manuals and software, no box or 2042 antenna.

Best offer over $400 takes this superior package.

Paypal or money order, buyer pays for shipping and insurance.

If you look at all the discrim mods he does have. look for one of those IC chips in your radio. it will be small. probably the size of a sunflower seed. and it is usually the pin listed on that list you have too.

I forgot to add. most flex that is out there is still up to 1600 not many abouve that. unless you live in a high tech city. if you didn't build a 2 level before and checked to see if your com port works and see if flex goes past that. then 4 level will not be worth it. and is a pain to make too.

Nextel has approached us to put a cell site on our building. Because we have both two-way radios and scanners in our newspaper, I was concerned about interference.

A Nextel engineer took us to an antenna farm on a local high rise that had not only their stuff, but a big mix of other transmitters on a variety of freqs.

We set up a couple of consumer-grade scanners within 35 feet of the Nextel antennas and scanned the whole gamut of bands from low, vhf, uhf, am aircraft, 800 conventional and 800 trunking,

The receivers may have been desensed a little, but we were able to hear all the frequencies we need to listen to.

Dev,

Mr. Cheek lists the IC as IC-401. The only thing that I see that looks like the discriminator has a label on the
board as IC-701. The top of the chip is obstructed with a glob of glue and a silver looking circuit bent over on top.
As you can tell I am not electronically inclined. I cannot locate an IC-401 anywhere on the board(s). My Pro-46 is a pre 'cellular block' model. bought it in 1993 or 94? So maybe the Pro-46 w/ cellular block has a different set up and this is the one he lists in his list?
Anybody with the older PRO-46 reading this? I have searched for several hours on this subject w/ no real luck. Thanks for
the info Dev and any more help will be much appreciated.

Cheers!!

Rob

get a scanner and sit outside 1600 with a rinky dink (highly technical term
i know) antenna andsee what you pick up ... More than likely it will be
digital (EDACS) and use DES (or 3DES now) for encryption.

last time I knew they were using 1.9m

: >We are seeing the drug runners using ham equipment, both HF and VHF HTs,
: >to coordinate their activities. This is mostly happening along the
border.
:
: Sounds reasonable.
:
: >And we have spotted number stations, these are transmissions that consist
: >of nothing but numbers and are usually transmitted in CW mode, working
: >within the US. Several have been heard in the Chicago area and along the
: >toll road in northern Indiana. From what friends have said, it sounds
like
: >mobiles as they overload your radio if you get near them. Such spottings
: >have been reported to the FBI, naturally.
:
: Let me get this straight. Drug runners in the state of Indiana are
: setting up in cars or vans along roads and using CW (Morse code) to
: transmit numbers-encyphered messages to their cohorts? I don't think
: so.
:
: If this is a "tactical" situation, why would these drug runners use
: such a slow, inefficient method of hand-encrypting and hand-sending
: (in CW) messages of time-critical importance? Why CW when voice would
: be much quicker? Why not laptop computers with cellular modems and
: PGP encryption?
:
: I would be interested in the details of these alleged drug-related
: communications - frequencies, message formats, etc.

I did not say that they were drug runners. More likely someone engaged
in espionage like the Serbs (which there are many in Chicago). Or the
Russian Mafia (ex KGB).

As to why CW, numbers transmit better via CW than voice. The problem
with laptops, cell phones or the internet is that you can trace both sides
of the conversation. It is easier to target not only the sender but who you
are sending to. The sender might be only a diplomat who has protection.
His target, however, needs protection.

Remember this is how the pros work.

Actually I would think you'd be more apt to pick-up a couple of secret
service agents in your rear view mirror.

1) Morse code is easy to learn.
2) The equipment is EXTREMELY simple, and easy to hide and/or disquise inside
other electronics equipment
3) no infrastructure support needed
4) it's very easy to hide something "in plain sight" where nobody bothers
to look (it's VERY easy to hide many things IN DIRECT LINE OF
SIGHT of searchers...by merely putting it above eye level)

primitive CW fits that description. Americans are overly-fascinated
with modern technology, and thus, tend to ignore older technology
which still works just as well as it always did.

5) If you've got a good plan, pre-set messages with fill-in the blank
variables, off of a "one-time pad" is even more secure than
PGP will ever be.

Not only that, but there is no way for the drug runners to find out
who is DF'ing them.

Lets not overstate things, Stark. I was not talking about using the military for law enforcement. All I was suggesting was the use of military personnel to search shipping crates (something police say they cannot do effectively now because of personnel shortages). If drugs are found, the police would investigate, gather evidence, and make any arrests. Therefore, something like this would not result in any threat to your "free democratic constitutional republic."

sorry if that is the one. I wish I could help. all I can really say is maybe pull off the glue. and the IC will have atleast 12 or 14 pins on it or more 16. If that helps. and that is a pretty long number too TK-10421M-3LT that would be ont he IC. if you are weak hearted about soldering. Find someone to do it. if you were close to washington state or canada I would do it for you. since it is only a tap. not a restore of a frequency. so I don't see why it would be illegal. if you get too much solder on it. or anything on that IC then the radio is trash. unless the ic can be replaced easy. hehe

each ctcss tone sounds different. if you listen closely to a transmitter key up. you hear a really quiet humm. but you have to have really good ears or really good path with atleast a s9 receive. you really hear the 69hz are tones. they humm in a way. but to decode em. jsut get a radio that has ctcss receive. set it on. and you will decode it. it isn't really good for anything. it isn't data or anything at all. just a tone. like on your phone. ex pressing 1 2 3 4 5 6 7 8 9 0 * #. it is only good if there is alot a traffic on one frequency and they use a whole bunch of tones to seperate the people. if you don't have a ctcss radio then you hear every single conversation on the frequency. I like hearing them all . just in case.

1221. FS: Icom IC-W31 Dual Band HT Package!!!

Newsgroup: rec.radio.scanner
Date: 2001-03-23 06:14:35 UTC
From: foxblaine@aol.com
Message-ID: <20010323011435.28057.00000768@ng-mi1.aol.com>
Source record: 68059

Greetings!

Up for SALE now is a most excellent dual band (2m/440) handheld transceiver, the Icom IC-W31. Included with the HT are 3 good working batteries (though I cannot gaurantee batteries...they are working good and holding a good charge at this time.) Two of the batteries are BP-173's (9.6v 650mAh), and the other is a BP-171 (4.8v 700mAh) battery. Also includes Icom leather case, AC trickle charger, speaker mike with independent volume control on the mic (Nifty feature, but I have to be honest, the clip on the mic is broken -- easy fix for you to do if I don't do it first!), as well as original box and manual. AWESOME package with WIDEBAND receive! First $295 via PayPal gets it shipped to their door via USPS Priority 2 day mail! Priced to move quick!

Still, you don't want to get caught with your phone being added to thier group list, unless of course as below mentioned you do some sneaky untracable phone on the iDen network, but then it would probally only last or work for you for about 90 days TOP! As I mentioned before Law Enforcement, especially Federal reviews all access to their 'groups' on a monthly basis. Now if you can hack the central server and try to clone a digital iDen phone, then you might get someone for a long time.

Wrong. Having the military searching property IS using the military for law enforcement. Using the military to perform a police function is a large step in the wrong direction.

For "the police" to search shipping crates, there has to be probable cause. Customs border inspections are one thing; WOD searches for drugs should be another. In either case, the military have no legitimate role in domestic policing, regardless of whether the agency they assist is federal or not.

When the military works in law enforcement, they have to abide
under the same laws and defend civil liberties just as law enforcement
does. It really is only a matter of laws, and some training, that separates
the military from law enforcement work.

The problem is that we have so much crime, so many people no
longer wanting to obey the laws or even just get along with their
family, neighbors and co-workers that it looks like we could use
a police force of over 5 million officers just to settle the US population
down. The problem is that there are not 4 million additional US
citizens that we can trust.

Do a search and get yourself on the scan-DC mailing list. There are a number of people who listen regularly there and plenty of stuff is in the clear. Try around 165.xxx as SS stuff both in the clear and otherwise. Listen on ADW 118.4 & 119.3 and various ground freq if you are close enough. List server users report many other freqs.

> difference?

There are too many frequencies that cordless phone use that they share with
other radio services. For example numerous logging companies with licenses
use the 49 MHz band and the 49 MHz band can also be used for walkie talkies.

The 900 MHz is a shared band with dozens of radio services. If people are
concerned they should not use cordless phones except those that use digital
modes or spread spectrum.

Dev,

I was able to remove the 'glob'. On the first line of the chip is NPC
936P. Second line PLL2002A1. This is a PLL frequency synthesizer. Back to
the drawing board. Maybe the discriminator is on the other board. There
are two boards that you have to pull apart. The board I have been looking at
is opposite the board with the speaker and the keypad. There is a what
looks to be a tin sheet over half of that board. I am guessing that this is
where the main processor is located. Yea I have a couple of buddies that
are pretty handy with a soldering iron. Unfortunately they have no idea
where this chip is either. Thanks for all your help.

1984 comes a bit late, but people like you will probably be wondering how
Big Brother got to be so powerful when he comes after your family and
friends because you can't be "trusted."

The criminal law is not, and should not be, the only tool for fixing social
problems.

Message-ID: <25gnbtof3s4g5rtjv35frlf6obksfup482@4ax.com>
Source record: 68082

I was in San Diegio for the past 2 weeks and bought a new Pro-92 at Radio Shack. I programmed in the San Diego police trunk freqs and set everything up as a TYPE 2 system. But when I went to scan I heard nothing. In manual mode I heard plenty of traffic and the scanner was in open mode when scanning.

I just got back home (Tidewater Virginia) and it works great on a Type I system..... anyone have a Pro-92 in San Diego and have it working in trunk mode??? Thanks....

Richard

: 1984 comes a bit late, but people like you will probably be wondering how
: Big Brother got to be so powerful when he comes after your family and
: friends because you can't be "trusted."
:
: The criminal law is not, and should not be, the only tool for fixing
social
: problems.

Well, I do agree with you that the laws do not fix social
problems. Religion would seem to be better at that. Yet
we do have problems and until people decide to grow up
and be self disciplined then it looks like the police will be
society's "babysitter".

As far as the government coming after me, well the secret is
to be the "government". Those with political connects, wealth
or power (like working for government) have much less to
fear.

I don't think YOU comprehend the discussion. We were talking about involving civilians (such as volunteer ham operators) in the effort to locate drug runners who are abusing the police radio system around our southern border. My point was that there is a huge difference in the risk to one's personal safety between tracking down some teenager who's having some fun annoying the police and tracking down a heavily armed and highly motivated drug courier.

Comprende?

http://www.strongsignals.net has a feature on this incident.

Appears that the Dispatch end went wacko and a Fireman almost lost his life on the job because of lost coms.

Not to slam Digital but it has its limits, one thing I have noted if your City/Town is looking at this new and Expensive system that will lock most scanner users out; price and known problems with these systems should be researched and brought up at any public hearings; Salesman often do not know the limits or forget to tell of them and the Techs who work for the departments have little say once the big boys buy into it.

No radio system is 100%, but the old standard is tried and true, with its own limits.

the pro-92 can't track san diego's city trunking system since it is a splinter type system. i was told we have a splinter system since we're so close to mexico. the 92 works great for the RCS though. thats why i decided to get a bc780xlt so i could continue listening to sdpd.

glad to hear your pro-92 is working well for you. i actually had bought mine when i was visiting utah, at the time I did not know it would have problems with san diego until i returned home and programmed the radio to find nothing on the city system.

if you ever return here are some great sites with information for scanning in the san diego area

Don't necessarily blame the field equipment or the
base equipment...

The failure could very well have been poor system
layout in terms of appropriate places to install the
base station transmitters and wide-area voting
receivers ..

Another source of problems can be improper system
level setting and improper deviation settings when the
mobile and portable equipment was being set up ...

Is there any alternatives for an amplified speaker out there for a
scanner besides the one from Radio Shack? The RS just looks ugly.
I'm not sure what really constitutes beautiful and ugly for a speaker,
but if you want ugly, look for Radio Shack. ;) Maybe something not
quite so boxy? The speakers that come with Kenwood 2-way radios for
example, look better. I just can't seem to find an alternative to RS.
I have a RS amplified speaker and it seems to work good, just ugly.

1263. Pro-2006 Squelch Problem

Newsgroup: rec.radio.scanner
Date: 2001-03-24 03:35:06 UTC
From: KI7JL <Xlseiger@prodigy.net>
Message-ID: <99h4le$6rve$1@newssvr06-en0.news.prodigy.com>
Source record: 68000

My Pro 2006 has developed an irritating problem. When I place the unit in scan mode where it is scanning pre-programmed frequencies the unit will stop on a frequency with a hissing sound that sounds like a open squelch setting. If I adjust the squelch setting to maximum the hissing sound remains and the unit stays locked on the frequency. Usually, I lock this frequency out and continue scanning but eventually the radio will lock up on another frequency.

If I go to manual mode and advance to the next frequency the squelch works fine.

So, where do I send the radio to get repaired? Do you think Radio Shack will provide service on a Pro-2006?

1266. WA state- best VHF public service freqs?

Newsgroup: rec.radio.scanner
Date: 2001-03-24 05:21:48 UTC
From: W7TRX <w7trx@mindspring.com>
Message-ID: <99hb0muri1@slb4.atl.mindspring.net>
Source record: 68004

Greetings,

I have a 2m ham radio in my vehicle. I have my favorite 2m repeaters programmed with a fair number of open memory channels left over. I'd like to fill these with public service frequencies that might be helpful to monitor while commuting or traveling in Washington state. I live in King County, located in Western Washington, so this is my focus, but statewide travel info would be helpful. Locally most public service communications has gone to 800 MHz trunked, but I am assuming there is still a fair amount of useful VHF communications available. I have a frequency guide as a general reference, but was hoping to get the assistance of some local scanner fans to narrow in on the best of the best freqs.

My radio receives 136-174 MHz

The obvious first picks are the National Weather Service broadcasts. After that I'd appreciate good freqs for such things as highway conditions, State patrol, natural disaster (we just had that 6.8 quake and I'd loved to have had some helpful freqs to monitor) etc.

Any suggestions for a few entertaining freqs would be great too.

I appreciate any freqs or advice that can be provided to assist with this project.

73, Tracy
W7TRX

>analog, you may at least be able to get a weak signal to/from the cell site.

There's another reason too - cost. Cell phone companies around here
(BC, Canada) don't give away digital phones unless you subscribe to a
cellular "plan", with a minimum cost of about $25/month. If you don't
use a cellphone enough to use up the minutes you get with such a plan,
it's cheaper to use one of the prepaid or "pay as you go" plans. These
cost $25 for airtime every 3 months, not every 1 month - a factor of 3
less cost. For these plans, the carriers mostly sell (not give away)
analog (not digital) phones.

It's also possible to get perfectly good analog phones (e.g. Motorola
flip or 650) for almost nothing at thrift stores.

Sorry - I can't help but I thought I would just throw in a line....
The JIL SX-200 was my very first bought purpose-built scanner. Before then
I used home-built jobs and convertors etc.... Man does that set bring back
some memories.... No pun intended. It was a great little scanner with its
sloping front panel and slide controls........ I wish I could find one in a
dumpster near me.
If I see anything on this set I will let you know....
Good Luck and thanks for the retro thought......

Okay, Stark, if it will please you better, we can instead have the Coast Guard and Navy stop every ship coming into U.S. waters, at which point the military can board to search every single crate. In other words, when we're talking about shipping crates coming into this country, and drugs imported into this country inside those crates, it is not just "domestic policing."

By the way, it is utter nonsense to suggest the police have to have probably cause. Probable cause, or a warrant, is not needed to search any person, package, crate, or vessel, entering our national borders. Such searches are done all the time. For example, you, your bags, and your luggage, are subject to search anytime you fly into this country - no probable cause or warrant required. Likewise, the Coast Guard and Navy routinely stop vessels to search for illegal drugs.

Therefore, there would by no probable cause, or warrant, needed to search shipping crates at the docks as those crates enter this country. And, I see no reason the military cannot conduct those searches as long as that search is done under police, Customs, or Coast Guard, supervision.

Actually, when it comes to our national borders, the military already has authority to act. However, years ago, the Coast Guard was transferred to the Department of Transportation (during peacetime) so that it would have full police authority throughout the United States. It would be just as easy to transfer any number of military personnel to whatever government agency (DOT, Customs, etc) to fully give those personnel the same police authority.

What other "tool" would you suggest, Stark? Obviously, simply asking people to stop using drugs is not going to solve the problem, and neither is a bunch of liberal "feel-good" counselling sessions. In the end, if people insist on breaking the law, then the law is the best, and only, answer to the problem.

And that is especially true for the scum who import drugs into this country and for those who sell it on our streets. As far as I'm concerned, they can put these people under the jail and throw away the keys. And we can save money on keeping them in jail by cutting back on benefits like heat, lights, water, and excess food. ;-)

Yes, it is.

ALL persons on U. S. soil have the same rights, including coverage
under the 4th Amendment.

Use of Military to search ships in territorial waters is
unconstitutional, and it's ALSO unconstitutional if
they're in International waters (as the U. S. military
has no jurisdition there except in times of war)

How about saving all those billions of dollars and drastically reducing the level of violence on our streets by calling off the War on Drugs That Are Used by People Without Political Influence?

Many lies are told in the pursuit of marijuana prohibition, for example. The mere placement of THC into Schedule I is a lie - medically, chemically, and in any other dimension that applies. We wouldn't have the problem that started this thread if the United States was not pouring dollars and lives into an effort to stop the flow of chemicals and herbs into the country - an effort that simply cannot succeed and that produces consequences far worse than those of the behavior that we are attempting to stop.

People should be responsible for controlling their own behavior. The hard part about being an educated conservative is the realization that people generally do not evince a capability for taking proper care of themselves. Despite that, I still do not believe that every ill-advised behavior should be a felony or that everyone who misbehaves should be locked up.

As you are all aware grounding is very important I have been monitoring HF for about 4 Weeks now and today I decided to ground my radio. I bought a grounding strap from B&Q for ï¿½1.49 and 5 Metres of earthing cable for 70 Pence. I have connected it all up a 2 minute job I put the strapping cable on to a central heating pipe (copper) and the other end obviously on to my radio gnd screw any screw on the radio back will do. I tuned to 5.696Khz where I used to have Five Bars of static and could hardly hear culdrose to my amazement all the bars had gone and culdrose was loud and clear. All the other frequencies were clear aswell. My advise if you havent grounded your aerial do it.

Thanks

Jonathan

The Navy doesn't and can't stop every ship. They are part of the military. The Coast Guard can because they belong to the DOT not the DOD. Big difference and completely different rules. All it would do is change the method of t

The Navy does not routinely search for illegal drugs. That would be considered a military action and to some countries and act of war. The Coast Guard can routinely search for drugs because they aren't a military group, see above explanation.

Because the military should not be involved in the enforcement of civilian legal issues. Those are left to police, customs and the Coast Guard. When the military starts enforcing civilian law we are one step closer to a military leadership making civilian laws. No thank you, lets keep them seperate like they are now.

Glenn

1287. Goal Net camera frequency?

Message-ID: <8t8v6.10416$QA3.384717@typhoon.mw.mediaone.net>
Source record: 68025

After going to a number of local hockey games, Detroit Red Wings, I noticed the remote controlled video cameras in the nets at each end. It appears from my observation that the video link operates on either a high UHF frequency, or microwave frequency, and this based on the size of the antenna I saw.

Does anyone have any information on this application, such as the video link frequency? I'm thinking about how feasible it would be to use the newly available scanners, with built-in video display, to view the game at the net level, while sitting in the stands.

Also are there any other interesting frequencies used during a game that, lets say, can be tuned in to by using a simple HT as a scanner?

He did not tell the truth about a deal with me..I bought a pro 2030
that was suppose to be Cell Mod and have a certain board (AA), he said
he done the MODS himself before the deal was made. After I got the
scanner no cell mod was done and it wasn't the AA board but the AB
board. Which is more difficult to MOD ..I dunno if he sells much in
here or not, mostly on Strong Signals, goes with the Nick of SCAN.
Tried emailing him but seems to be a waste of time, saying now that
someone else done the MODs.
I have all the emails from him before the sell to backup what I say.
I'm not saying he's a crook but in this one deal he didn't tell the
truth.

Try http://www.uscg.mil/ the Coast Guard home page. Notice the icon and
words "Department of Transportation" to the right of the US Coast Guard
banner or you can go to http://www.uscg.mil/hello.html where you will see
"Founded in the 1790's as part of the Department of Treasury, the United
States Coast Guard is now part of the Department of Transportation...."

> >The Navy does not routinely search for illegal drugs.
>
> Yes, they do, all the time. Hardly a week goes by that the news here
> in San Diego doesn't report a drug seizure by the Navy (usually off
> Mexico or South America).

The Navy will assist the Coast Guard with a Law Enforcement Detachment on
board the naval ship in charge of the drug operation. Do a WWW search for
Navy involvement with drug busts and you will find they all are in support
of the Coast Guard.

> >That would be
> >considered a military action and to some countries and act of war.
>
> Right, like any country that isn't _already_ fighting us would
> complain about it.

Scoff at it if you want. The Navy is only involved in a role supporting the Coast Guard. Countries that aren't fighting us would complain. It would be an act of war to have a vessel under the direction of the Navy stop and board ships.

> >The Coast Guard can routinely search for drugs because they
> >aren't a military group, see above explanation.
>
> WHAT law gives any national government agency, from ANY country,
> to stop, board, and search another countrys ships in international
> waters??

Usually they have cause when they do it with a Coast Guard Law Enforcement Detachment. Boarding of ships is usually not a random thing. The majority of busts are through tip offs or investigations by the Coast Guard. The Navy acts in a supporting role only.

Hello,
Sorry but Police Call might not help in this case. I havent been to Orange County lately. This place is really odd. Proximity to NYC prevents regular channel assignments. NYSP "Middletown" is troop HQ for that area.
155.505 Base, 154.835 Mobile and should be quite active.
I'm from Penna and I used to listen to a lot of county traffic on 155.85, purely by accident.
I know that Middletown PD runs 155.730.
Try the NYPD 470.8375, NYFD 154.250
Those will work.
Depending where you are, you may have to tollerate an EDACs private trunked system.
Try these web sites:
Jim Fordyce: www.fordyce.org/scanning
Then the upstate page: www.nf2g.com
Lots of luck, I thought I wanted to live there for a while, but I was glad to leave.

Regards,
Jim in Pittsburgh

The speaker i recommend plus it looks good i think is a motorola mobile speaker. They have the best audio for any radio i have heard. If you can track down a used one on ebay they are cheap or buy a new one from illinois. But most motorola dealers will sale them.

Huh, I did not know that cordless phones had moved to 1.2ghz. You would think that phone designs in that range would be digital or spread spectrum or both. The Panasonic 2.4ghz digital spread spectrum phones could be picked up in the 900mhz range in the past, because portions of the signal were/are analog, though they may have been redesigned at this point.

I accidentally placed my camera bag on top of my active scanner today and it apparently pressed some buttons!! The little lock icon in the bottom right corner of the display is blinking (normally it stays lit, not blinks) and holding the lock button down does nothing. I have tried all sorts of button combinations etc to no avail! I even tried unplugging the battery to erase the mem ... if I didn't want the memory to be erased it would not have a back up battery and I would cuss Uniden, but now that I want to erase the memory and it DOES have a back up I am still cussing Uniden!

If anyone has any suggestions please help.

Thanks in advance.

Message-ID: <Gkiv6.1343$zs2.434001@paloalto-snr1.gtei.net>
Source record: 67953

I just purchased this scanner, a Pro-92, I was looking for the pro-94, but anyhow, I like the features, I really like the text tags for group ID's, however, it seems to be inconsistent. I am new to trunk tracking scanners, but I have owned scanners most of my life. Is it normal for trunking scanners to not find a group id half the time. I have a great strong signal, and I have the control freq's perfect, but if I lock in a control ID it will miss some of the conversation, and sometimes I hear other channels chime in, wrong ID on the channel I am listening to. If anyone else has this problem with the Pro-92 then please let me know. I am about ready to take it back. I also own a Pro-25 which is 800mhz, and cel capable, but not trunking, however, I can follow the channels better with that sometimes. Any help is greatly appreciated.

I have also played with different levels of squelch, which did not help any.
Thanks

Not a chance. I've personally seen the effects of drugs on my family, and on my friends, and on my neighbors, and on others I've known, and I'll never support an end to the war on drugs. If anything, I would much rather see a dramatic increase in that war.

> Many lies are told in the pursuit of
> marijuana prohibition, for example.

Yes, and most of those lies are being told by those supporting the legalization of drugs. For example, contrary to popular myth, marijuana is extremely harmful - both in itself and as a gateway drug (see below).

> [snip] an effort ... that produces
> consequences far worse than those of the

Sorry, but I've seen that young drug overdose victim (who started down the path of drug addiction with marijuana) laying on the floor, so you're never going to fool me with that nonsense.

A couple of years ago, I spent four days on a Navy frigate photographing a drug intradiction patrol. During that period, crew from that vessel boarded six ships - two for a full search, three for a check of papers, and one for a quick check of the crew for illegals (a number of other vessels were questioned by radio). If the Navy is not allowed to stop vessels and search for drugs, then someone needs to inform the Navy (because they are doing it).

No, the Coast Guard used to be DOD, then they were Treasury, and now they're DOT (except during wartime, where they fall back under DOD again, as part of the Navy). Confusing enough? Imagine how confusing it is for Coast Guard personnel.

Or those "people who aren't Christian" could stop acting like "they" don't know what the "mark of the devil" is, especially since "the mark" has been featured in popular movies, music, and literature, around the world for a great many years. Of course, ending the facade of stupidity would eliminate this opportunity for those "people who aren't Christian" to engage in the agenda of trashing those who are once again.

Don't fall for silly nonsense like this, W6DKN. This guy is either the most ignorant person on the planet (which I sincerely doubt) or he is simply baiting you into an argument about religion.

Baloney. I know lots of people who have tryed or used marijuana
without moving to hard drugs.All drugs have certain bad side effects
but alcohol is one of the most dangererous and sordid drugs around,it is
highly addictve and chnages people's personality to a violent demeanor.
How many thousands of drunk driving deaths do we have in the U.S.?

Marijuana having some negative side effects still has several medicinal
uses and it does not cause people to become violent and go into a stupor.

Hi Shane,

What version of the Pro92 are you using? There are three versions that
are currently available. Have a look at
http://www.pro-92.com/updates.htm to determind the one that you have.
If you have the original one then I recommend you take it back. There
are numerous problems with the original Pro92 in tracking large Motorola
Systems. The original Pro92 used the subaudible tone method to track a
Motorola system. The Pro92A and Pro92B use the control channel method
(just like the BC235xlt and BC245xlt) which is much more reilable. The
Pro92 (all versions) doesn't do very good job of tracking LTR Systems
either. I've been tracking various LTR systems here in the Bay Area
with the BC780xlt and was very suprised at many transmissions the Pro92
missed.

What type of trunking system are trying track?

Bob

It would be interesting once you find that goal camera frequency to see if the video could be viewed on that new Icom scanner that has the small LCD color video screen (I forget the model number).

I'm sorry you have so many druggie friends, but the actual impact of illegal drugs on society is not nearly as dramatic as the hype. Alcohol and nicotine do more widespread harm than virtually any other recreational drug regardless of legal status.

> Yes, and most of those lies are being told by those supporting the

The "gateway myth" has been thoroughly discredited already by actual science. The (federal) government may not be too cooperative with anyone who wants to publish that information, but it exists.

Marijuana is not pharmacologically similar to other Schedule I drugs. It is not addictive, does not create any physical dependency, does not cause overdose conditions, and does not seriously depress the central nervous system.

Sorry, but NOBODY HAS EVER DIED FROM A MARIJUANA OVERDOSE. And, as above, the gateway path idea is A MYTH!

Get some facts. They are available, but you won't get many of them from the Feds.

Believe it or not, not everyone is familiar with the tenets of your religion. It's the height of arrogance to assume that merely because you believe in your religion that everyone else knows all about it regardless of their own personal beliefs. I have no idea what "the mark of the devil" is and I don't particularly care since your devil is of no concern to me.

All this guy said was "where do you plan to wear the mark?" I had no idea what he was talking about. You should go find someone and talk out your problems. You really are wound far too tight.

Tom you should have known to ask a reasonable question here, some of these people are just "regular assholes". If I would be in the market for a new scanner, I would like to know what other owners thought of a particular model also.

I wish I could be of assistance but I don't own a BC-780. Good luck finding anything out in these newsgroups. It's rare to get a decent answer these days. By the way BRAVO and RaZOr , a search engine doesn't tell the real tale on any product, it's the end user that counts and that is what Tom was looking for. Grow up.

Really? When was the last time somebody was assaulted, robbed, burglarized, or killed by someone for a beer or a pack of smokes?

And before you mention traffic accidents, whether high or drunk, the driver is just as deadly, but a doper is much more likely to cause a pursuit than a drunk.

Does this scanner have the programmable text display, for example, can you program it to show, SHERIFF instead of ID 00848. How happy are most of you with this scanner? I just took my Pro-92 back to the shack, it could not keep a good lock on the group id's I was trying to follow. I was just not happy with that one. Now, also.....does the Pro-94 have the same problems as the Pro-92. The Pro-94 is appealing because of the 1000 channel capability, and the 1.2 ghz also, but it does not display text in place of group id's. How happy are any of you with this scanner. Thanks for all your help

Does anyone have a used or new antenna for sale?
This is for a mobile scanner which I am converting to base.
It needs to cover most scanner frequencies and is omni-directional.

Email me your offers.

Thanks!

-Jack

Coast
: > Guard and Navy stop every ship coming into U.S. waters, at which point
the
: > military can board to search every single crate. In other words, when
: we're talking about shipping crates coming into this country, and drugs
imported
: > into this country inside those crates, it is not just "domestic
policing."
:
: The Navy doesn't and can't stop every ship. They are part of the military.
: The Coast Guard can because they belong to the DOT not the DOD. Big
: difference and completely different rules. All it would do is change the
: method of t

It has been an ongoing discussion about moving the Coast
Guard back to DOD. What is now being proposed is to
put the Coast Guard, along with the National Guard, under
the new Homeland Defense Agency at DOD.

Besides there are many LEOs in the Guard and most
LEOs come from the military. The Navy, and the Marines,
still have full law enforcement powers over US citizens. The
Army has a few restrictions, most of which are now being
removed by new laws.

: > By the way, it is utter nonsense to suggest the police have to have
: > probably cause. Probable cause, or a warrant, is not needed to search
any
: > person, package, crate, or vessel, entering our national borders. Such
: > searches are done all the time. For example, you, your bags, and your
: > luggage, are subject to search anytime you fly into this country - no
: > probable cause or warrant required. Likewise, the Coast Guard and Navy
: > routinely stop vessels to search for illegal drugs.
:
: The Navy does not routinely search for illegal drugs. That would be
: considered a military action and to some countries and act of war. The
Coast
: Guard can routinely search for drugs because they aren't a military group,
: see above explanation.

In US coastal waters, we can do whatever we want. On the high
seas, not even the Coast Guard can stop ships.

: > Therefore, there would by no probable cause, or warrant, needed to
: search shipping crates at the docks as those crates enter this country.
And, I
: see no reason the military cannot conduct those searches as long as that
: search is done under police, Customs, or Coast Guard, supervision.
:
: Because the military should not be involved in the enforcement of civilian
: legal issues. Those are left to police, customs and the Coast Guard. When
: the military starts enforcing civilian law we are one step closer to a
: military leadership making civilian laws. No thank you, lets keep them
: seperate like they are now.

Stop being paranoid. Look, we in the military are already
pushing our people into elective office. Congressman Buyer
is a LTC in the USAR. I served with him. I have judges,
school board members, mayors and all sorts of other elected
offices that are being filled by reservists or retired military.

Now we could just get rid of the military and give the police
military duties.

1350. Re: Drug runners grow fearless along border

: > > activity - absolutely!
: >
: > If police violence against jammers worries you, I suggest that
: > you not engage in that activity.
: > COMPRENDE???
:
: I don't think YOU comprehend the discussion. We were talking about
: involving civilians (such as volunteer ham operators) in the effort to
: locate drug runners who are abusing the police radio system around our
: southern border. My point was that there is a huge difference in the risk
: to one's personal safety between tracking down some teenager who's having
: some fun annoying the police and tracking down a heavily armed and highly
: motivated drug courier.
:
: Comprende?

Very little danger. I expect that you know very little about
DFing. Much of it can be done from a distance. Even the
last bit of triangulation can be done in a police car with the
ham as a passenger. It would only take a two to three teams.
Once you have a good ideal of where the transmitter is (within
a football field area), the cops can move in to do the search.
Hams would not have any contact at all.

The same technique would be used in the military was involved.
The cops would do all the close in work.

: >
:
: So where do you plan to wear "the mark" ???

First, I do not plan to be here when the "mark"
is issued. And the mark of the beast is of a spiritual
nature, not physical. It has to be in order to have the
effect of blocking the new birth. In fact those who
are "born again" in the tribulation will not be able to
receive the "mark".

Second, the tribulation only effects Europe (the ten
nations of the restored Roman Empire). My guess
is that most of the world will be depopulated by the
Gathering Together (Rapture). What folks are left
in the US will be at a survivalist level. No fuel, no
food, nothing. However, the US will be a place
of escape for those in Europe, if they can make it
here.

It does rather look like we are seeing the beginnings
of a "Great Harvest" as more and more Americans
come back to church. And Asia and Africa already
have huge church growth. So does South America.

But for now, either working in government, having money,
political power or political connections seems to keep
the worst of our current "neo-Victorian Age" at bay.

1353. FS/trade: Bearcat BC-101 scanner

Newsgroup: rec.radio.scanner
Date: 2001-03-26 00:44:39 UTC
From: Don Bertone <dbertone@flash.net>
Message-ID: <Xhwv6.1232$NJ6.230967340@newssvr10-int.news.prodigy.com>
Source record: 67988

This is the FIRST user programmable scanner ever made that allows you to program using the channel select switches as dip switches when in the program mode.

16 channels of blinking light glory in real good shape with original manual and software to compute the switch settings when programming.

This was the first true programmable scanner that only need to use it's own switches. There was another before this but it used pieces of metal that you broke bits off of and then inserted into the scanner. Sort of like the old IBM punchcard method. Once you used up the metal, that's it. Maybe back then it didn't matter but now you are in trouble. This scanner is truly programmable over and over.

$150 or a trade for something. I don't have anything in mind so make your deal.

Okay, let's suppose that your teenage daughter is raped. An ambualance has to be dispacthed, *with info about what to expect.* Police have to dispacthed, with info. After the police arrive, suspect descriptions have to be *broadcast,* with details about what they are wanted for. All of that, contributes to why too many victims don't want to call police/prosecute. There are *sick* bastards out there, ready to prey on those victims. OTOH, there could be more people looking for the perpetrator, so they _can_ be prosecuted. I don't have any answer, much less and easy one.

I know of acase, many years ago, where a "wireless phone" was used a
similar way. All you have to do is read Usenet, to know what sick
bastards are out there. And that's the ones with money to connect, and
stupid enough to show themselves. Ted Bundy, was just such, and smart
enough to not be caught right away. Who knows how many are out there
we _don't_ know about, because they haven't screwed up enough?

First you tell us to stop being paranoid. You immediately follow that
advice with the exact reason Americans should be terrified.

Your comment about the military having full law enforcement powers over
American citizens was excessive as well. There are serious limitations on
the circumstances under which those powers can be excercised. They cannot
do domestic policing, and MPs have virtually no authority over civilians
outside military reservations.

We've making available FREE display ads to be placed in the Scanner Digest Newsletter. That's right! Just contact us and we'll give you the mechanical requirements needed for a FREE display ad. Police, Fire, EMS is just the tip of the various topics that we cover in our bi-monthly publication. Written in a casual digest-format publication with over 50 pages of frequencies, photos, and descriptions of various communication systems. It's NOT A FREQUENCY DUMP but a newsletter that provides insight to the areas covered by those who really know. Many of our column writers are public safety personnel or happen to work in the radio communication industry.

This offer is on a first-come first-served basis and our only requirement is that your display ad be related to the scanning hobby. Radio equipment sales, accessories, modification services, computer related add-on devices, publications, etc. is just a small example of the type of ads that we'll accept. We reserve the right to limit any item that we deem illegal or inappropriate for our readers.

Whether you have a small business that sells to the scanner hobbyist or whether your part of an organization that would like to get the word out about your group, your invited to take us up on this offer. We can list your events, meetings, announcements, hamfests, etc.

We will make provisions to list your group's web site or whatever information that you would like to convey to our 400+ readers. We're a small regional scanner publication that's been growing strong and approaching our 3rd year. Scanner Digest attempts to provide regional scanner coverage to those areas within the Northeast Corridor from Maine to Virginia. We're also including regional scanner columns from areas outside our main coverage area every month as we grow to cover other areas.

If your curious about the Scanner Digest Newsletter, you can send $2.00 for a sample newsletter. Subscription information is included in each issue. Those who place ads within the Scanner Digest will naturally get their newsletter on a complimentary basis. There's limited space available so your encouraged to act quickly.

Please write or email for details about this offer!

Actually, war ships can halt and board *ANY* vessel on the high seas
to inspect their paperwork and cargo.

It's all entirely legal.

This came up in the USS Pueblo (unmarked electronic eavesdropping trawler) debacle.

The ship's crew on board were told to comply with ANY routine boarding
operation by foreign naval personnel. The ship's spooks were told to
treat any boarding as an imminent emergency, and to get rid of all of
their collected data, and to attack all of their equipment using certain,
precise methods which were specifically designed to *NOT* break it
(such as using sledgehammers against equipment with very strong chassis
rather than thermite grenade which would melt right through), so as
to "deliver" a bugged decoding teletype machine to the Chinese sphere

of influence...thus, allowing the Chinese to think that the were getting
hot info by listening into US intelligence traffic...when it was actually
all a set up to see if the Chinese would give the information to Moscow
(because we could read Moscow's "mail")

The military *IS* allowed to conduct contraband searches...in fact
on the high seas, they *ARE* the law.

Not only that, but DF'ing works BEST when the initial work is done
from several widely seperated points, to more accurately pinpoint
the initial football-field sized patch of groudn to search.

In that respect, the hams never even have to leave the house.

> The same technique would be used in the military was involved.
> The cops would do all the close in work.

>with this scanner?

Well the Pro-94 is really the BC-245xlt with a 1000 Channel modification, the
245 has 300 channels. I owned a 245 for a year and was very happy with it.

> I just took my Pro-92 back to the shack, it could not

>the Pro-92.

No, it is a good trunk tracker, however you should replace the supplied the
antenna with a good quality one.

> The Pro-94 is appealing because of the 1000 channel capability,
>and the 1.2 ghz also, but it does not display text in place of group id's.
>How happy are any of you with this scanner. Thanks for all your help

Get the Uniden BC-245xlt or if you can afford it the new BC-780xlt
which has alpha tags and many great features.

See http://www.strongsignals.net for information on scanners.

Here is a second vote for the Motorola speakers. I bought a couple of used ones on eBay awhile back for a very good price. I own a restored vintage fire engine that has an open cab and I needed something so I could hear the 2-way radio and scanner over the engine and road noise while driving on the highway, and they work great. They show up for sale on eBay on a regular basis (the black ones are more attractive than the beige ones).

Sorry, but I feel that the biggest mistake we have made in
the US is pushing "professionalism", ie fulltime careerism.

The US military reserves have shown that part timers can be
as good, if not better, than those whose income is totally dependant
on active service. Every police and fire department should
have, by law, a reserve force. A reserve force should be
used to screen, train and help select those who might be hired
fulltime. By this I mean that those wanting to be police or fire
would join as a part timer, be trained then work along side the
fulltimers. In time there would be enough evaluations that everyone
would know if this was a person who could make it as a fulltimer.
Then there would be more training. Also, most police and fire
officers leave within five years of joining. A reserve force would
be a great way to retain trained and experienced officers.

In other words, it would be a "militia" of type. Just like the National
Guard. But volunteers do have a place in law enforcement.

: >offices that are being filled by reservists or retired military.
:
: First you tell us to stop being paranoid. You immediately follow that
: advice with the exact reason Americans should be terrified.
:
: Your comment about the military having full law enforcement powers over
: American citizens was excessive as well. There are serious limitations on
: the circumstances under which those powers can be excercised. They cannot
: do domestic policing, and MPs have virtually no authority over civilians
: outside military reservations.

Only a matter of laws. The Army was there long before the US Marshals
or the FBI doing federal law enforcement. And the Army is being given more
authority (a weaking of the PCA) with respect to domestic terrorism and
drug enforcement. Also look at the new Homeland Defense plans. The
National Guard has a huge mission.

: > First, I do not plan to be here when the "mark"

: > here.
:
: If you had told us up front that you were a radical fundamentalist, it
would
: have saved a lot of bandwidth. No rational discussion is possible, and I
: don't have time to exchange wild rants.

Since I am not a protestant, especially a Baptist, I can not be a "fundamentalist". And what I described as an ecclesiology that is accepted by most throughout Christianity. The fundamentalists are more likely to believe that everyone will suffer through the Tribulation.
(A smaller camp of thought.)

As far as my beliefs, well I practiced Orthodox Judaism in the '70s, have studied under an number of scholars with respect to Christianity and learned a great deal about Islam (enough to respect them) while living in Saudi. The study of religion is sort of a hobby.

: Ugh!
:
: Sounds like any of a number of socialist police states.

Or France where the police work under the control of
the military. It is nothing to see a police officer with two
soldiers on foot patrol. And all of them have their weapons
chained to their waist to stop someone from stealing the
weapons if they are killed.

: Dave,
: Don't know about repeaters or drug smugglers, but I do personally know
: of an instance within the past several years where large scale marijuana
: growers purchased Icom 2 meter handhelds and used them on a simplex
: frequency for their operations. Local hams ran across them and after
: hearing the coms, advised local law enforcement. Arrests (on drug
charges)
: and seizure of the equipment came very quickly. None of the participants
: were licensed hams. The Icoms were sold at a Sheriff's sale and some
local
: hams got some nice handhelds are a good price. So, here is a documented
: case of unlicensed persons using 2 meter radios to break the law.
: I'd bet it's not an isolated case...
:
: 73,
: David K5DEL

Just look at the 10m/CB problems. The Indiana State Police
now stop people because they have too many antennas on their
cars. Drug traffickers are using a chase vehicle with scanners and
either CBs or ham equipment. The scanners listen for the cops
and the two way radios are used to warn off the "mules". Also
the chase vehicle has the weapons to fight off rival gangs.

We had a discussion on this within the NGs are few months ago.

: This is religious racist bullshit!

How so, Matty boy? Baby Boomers are increasingly
going back to church, especially to evangelical churchs
like the Assemblies of God. And the AG church, which
John Ashcroft belongs to, is now the largest non catholic
church in the world. It has seen its growth in places like

South America, Asia and Africa.

Matty boy is just another feminized male in America. Part
of the neo Victorians. Wonder if he wears a Buster Brown
suit that his mommy bought him.

So foul-mouthed Buddy! Mamma's gonna wash that mouth out!
She doesn't like you staying up so late using her computer
either. The zone alarm configs you setup are way too easy
to breach. Won't matter anyways...

You know what's even funnier? I don't even know who
smhong@mindspring.com is!

Get a clue and get your stalkers straight.

I got a disk cone antenna from rat shack and hung it from a hook in
the ceiling. It's broad band, works well, and looks kinda cool.
I'm in a second floor apartment.

It's time to take a vacation from the newsgroups again.

I am getting excessively irritable and I am starting send rude comments to other users, so it's time to step back and relax for a while. I am turning into the kind of demagogue that I normally despise. I apologize for any insulting comments that I have made recently, especially to N9NWO and others in the threads about drug runners.

I'll be back when I can be more civil.

1403. icom R-2 or Yaseu -VR500

Newsgroup: rec.radio.scanner
Date: 2001-03-26 21:07:57 UTC
From: Elbert Clarke <elbertc@home.com>
Message-ID: <tabvbtg0utopcaebqm91td3rk980ecu15t@4ax.com>
Source record: 67939

Hello,

Thought about buying one or the other of these scanners........

Icom R2 or ten Yaseu-VR500

r2 has some decent reviews and so does the vr500. I did notice that
the icom unit can be programmed by computer while the yaseu cannot.

Anyone have any good / bad experience with either one? I've owned an
icom unit in the past and was not to thrilled with it. Don't want one
of these if they get overloaded every time a pager transmitter goes
off.

The r2 is cheaper but that does not mean its better........ Anyone
own one of these care to comment.

Seems like it would take forever to program the yaseu?

Thanks........

1408. Antenna Rec's

Newsgroup: rec.radio.scanner
Date: 2001-03-27 00:04:46 UTC
From: Scooter <scooter@skipland.zzn.com>
Message-ID: <vCQv6.76$8%6.1434@newsfeed.slurp.net>
Source record: 67945

I know this has probably been thrashed a hundred times, but sometimes new things develope. I'm installing my Pro 2067 in my car in dash. I'm removing my Pres. Lincoln for a receiver go figure. Anyway I was wondering what a good antenna would be for my app. Frequency range is 154-157, 454-462. Most of my programmed freqs are in the 454-462 range. Nothing here is trunked, and rarely do I listen to something different. What are my options, and what should I do. Not that it makes a difference, but I have the cables still installed from the old radio, and I still have the mount (3/8-18) on the trunk. I didn't feel like filling the hole yet. Thanks.

The problem is is that the witness could not be cross-examined. However, the videotape could be treated as an affadavit. (I'm not a lawyer, this is not expert advice).

Something for the few police who support gun control to think about. I could envision a frightened witness refusing to testify, even with "police protection," because he/she would be unable to protect him/herself 24/7. If I lived in DC and could not own a gun, I myself might decide "I don't want to get involved." Since I live in PA and could acquire my own "witness protection program" if I thought I was in danger, I'd be far more willing to take a chance and give my testimony.

I have had both radios and liked the Yaesu better. Both the Vr500 and the R-2 can be programed by the computer. The R-2 is rather hard to used because of not having a keypad.
Dwayne

1415. FA: YAESU VX-5R TRI BAND HT + ADMS1E Software Kit

Newsgroup: rec.radio.scanner
Date: 2001-03-27 02:04:44 UTC
From: "Paladin Music & Entertainemnt, Inc." <PaladinMusic@yahoo.com>
Message-ID: <99osj3$7kr$1@bob.news.rcn.net>
Source record: 67849
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.scanner

I have this unit up for auction at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1224750078&r=0&t=0&showTutorial=0&ed=986076487&indexURL=0&rd=1

I bought this radio less than a month ago for a trip to California but didn't use it because I forgot the power supply! LOL! Everything is in new condition, complete in the original box. The VX-5R still has the plastic LCD screen protector on the it.

This is a tri band: 6 meter, 2 meter and 440 mhz handie talkie with wide range scanning capabilities including Middle Wave, Short Wave, VHF, AIR, UHF and 800 mhz. The specific ranges covered are: 0.5 - 16 mhz, 47 - 729 mhz and 800 - 999 mhz (less cellular). Radio has been MARS-CAP modified for authorized users.

The supplied 7.2 V 1100 mAh Lithium-ion battery provides 5 watts out on 6M and 2M and 4.5 watts on 440 MHz. Features include: 16 digit 9 memory DTMF autodialer, CTCSS/DCS, 220 memories, aluminum die-cast case and 8 character alphanumeric display. The HT is very compact at 2.3 x 3.4 x 1.1 inches. The complete package includes the following:

YAESU VX-5R tri band transceiver / scanner.
YAESU AC adapter/charger - NC-72B/C/U.
YAESU rechargeable lithium-ion battery pack 7.2V 1100 mAh - FNB-58LI.
YAESU 3 band rubber duck antenna & extension.
YAESU operating manual.
YAESU original box and packing material.
YAESU ADMS-1E Programming Software.
YAESU ADMS-1E Programming Cable.
YAESU ADMS-1E User Manual.
Additional Software included: Easy VX-5 Editor, Ver 1.70

So why am I selling such a great radio? I want to put a tri-band mobile rig in the car since that is where I spend most of my time. Again, item is in mint condition, no marks no scratches, everything works fine, original box and packing plastics. I am the original owner. Winner pays fixed $3.50 shipping unless winner is international. Personal check, cashier's check or money order okay. NO PAYPAL! 73's and good luck!

I recall, that I once performed a "European" freq mode to mine to restore a portion of the Low VHF band. Well, turns out that mod ended up locking out the 49 MHz freq band. So I undid it. Maybe that mod was done to yours. ???

It's possible. 1.2ghz is half of 2.4ghz. Maybe there were some interim phones.

I don't know about you but here in Dallas/Ft. Worth Tx, I've never heard open communications about anything
that was remotely understandable except for accidents and disturbances.
Everything is coded around here. Like a code 7 is a dead person, and so on and that's just an example as I don't
have a chart of what the codes mean.
Also, the real personal stuff is sent over MDT that noone but law enforcement can see (except for illegal reception
by nerds).

UNRUMORING THE RUMOR MILL: ACCUSED SPY IS LICENSED RADIO AMATEUR

Over the past week ARNewsline has received a large number of phone calls and e-mails asking if a man named Robert Hanssen who recently arrested by the FBI and charged with spying is a ham. A story along these lines first appeared as a rumor in Internet news discussion groups. It remained a rumor until last week when Fred Maia's March 15th W5YI Report headlined a story as "Ham Charged With Spying For Russia." This item has not only sparked further debates on the Internet. It has also lead to many heated discussions on the air. This is because a Robert Hanssen, with the call sign K9QVL is listed on the FCC database to the same address in the Virginia suburbs south of Washington DC. ARNewsline(tm) asked reporter Paul Courson, WA3VJB to find out what is real and what is speculation. He has this report:

--

Hanssen, K9QVL, is shown on the database with a General Class license last renewed in 1997. At that time, he filed to an address in Vienna Virginia, where he was arrested in February and charged with espionage.

Hanssen, as widely reported, is accused of passing thousands of documents to Moscow in return for diamonds and cash worth more than a million dollars over a time span of more than a decade. Authorities have described the impact of his alleged activity as very grave.

A visit to his neighborhood March 2nd found NO antennas outside the residence to suggest Hanssen, the ham radio operator, was active on the airwaves. Video footage of family cars at the home in the days after his arrest also failed to show any ham-radio type antennas.

Interestingly, in the affidavit supporting the government's charges against him, Hanssen was quoted as telling his Russian handlers that he thought US authorities might have been on to him. The affidavit quoted Hanssen writing to his contacts that he believed he detected radio signal microbursts coming from his car.

What those microbursts might have been is anyone's guess. But Hanssen's familiarity with counter-espionage tricks of the trade, and his being a licensed ham radio operator, suggest he was well aware of any technical complications if the alleged spy case against him proves to be true.

Hanssen has been described by former colleagues as brilliant -- so intelligent that he had little patience with those around him who failed to immediately grasp his ideas. One former co-worker reportedly said he had the nickname of The Mortician because of the dark suits and intense personality

he displayed.

As government authorities removed various items from the Hanssen home in the days after his arrest, video footage showed a variety of computer terminals, monitors, printers and other such equipment. But the broadcast coverage did NOT show any ham radio gear like a Kenwood or Yaesu or other station equipment he might have had at his home to operate as K9QVL.

In Washington, Paul Courson WA3VJB, reporting for Newsline.

It will probably help some, but the results will ALWAYS be better if you
can get an antenna OUTSIDE of the house. That doesn't mean in the
attic, but actually OUTSIDE. Bite the bullet and run some coax. A
discone outside, with an antenna line going through the attic crawlspace
and down into the radio room, will give you markedly better performance
over even a mag-mount scanner antenna indoors.

From http://www.strongsignal.net
The ongoing problems of digital trunking.
Encryption will only make it worst.

Sunday March 25 07:20 AM EST
FDNY in a Radio Daze
By PATRICE O'SHAUGHNESSY and MAKI BECKER
The firefighters union accused department brass yesterday of trying to dupe employees and the public by saying the new radio system yanked last week after reports of malfunctions was used by two other major cities.

The Uniformed Firefighters Association - representing the city's 8,100 rank-and-file firefighters and fire marshals - demanded that Mayor Giuliani and the City Council investigate who authorized the digital radios as well as the claim they had been field-tested in Boston and Chicago.

"I think someone screwed up and someone has to be held accountable," union President Kevin Gallagher said at a hastily called news conference.

Steve MacDonald, a spokesman for the Boston Fire Department, told the Daily News yesterday, "We don't use digital, and we have never used digital."

The Chicago Fire Department declined to comment to The News. But union officials and WNBC-TV said Chicago representatives told them they did not use digital radios, either.

A senior adviser to Fire Commissioner Thomas Von Essen predicted heads would roll in the wake of the radio fiasco.

"Von Essen is incensed over the amount of misinformation that was given to him by certain of his staff, and there are going to be personnel changes," the adviser said.

So far, the city has shelled out $7 million for 2,700 new two-way digital radios.

The city switched to the new radios March 13. But within days, firefighters were reporting serious communication problems. On several occasions, calls that couldn't be picked up between firefighters working at the same fire somehow got transmitted to radios in other boroughs, the union said.

"It just caused mass confusion," said Rudy San Filippo, the union's Manhattan trustee.

On Monday, a Queens firefighter whose oxygen supply ran out in a smoke-filled basement made seven Mayday calls on his new digital radio that

union officials said couldn't be heard by his colleagues on the scene.

The next day, Von Essen ordered the new radios taken out of service and the old analog radios put back in.

Gallagher chastised the Fire Department brass for what he said were attempts to downplay the Queens incident.

"How dare the department question the use of a Mayday?" he asked.

Von Essen's adviser said yesterday that the firefighter would not have had a radio at all before the digital switchover and that he might not have been used to having one.

another bad rap for scanner hobbyists
and ham radio operators.

Gangs Go Hi-Tech to Silence Witnesses
Saturday, March 24, 2001 By Christopher Newton

WASHINGTON - On a street of closed blinds and downcast glances, neighbors remember Chrishanna Gladden's final days as the beginning of the silence.

The 20-year-old office worker was a familiar face, a lifelong resident of southeast Washington's most crime-ridden housing project. A place of violence and desperate want, where some hardened young mothers push crack for grocery money.

In 1996, two policemen rattled her screen door, asking about a neighborhood party that ended with gunshots and the death of her friend. She agreed to testify against those accused - three members of a drug gang called the K Street Crew. She was promised safety and set up in a small Holiday Inn across town.

It was not enough.

Days before the trial, gang members used a scrap of information, the Internet and police scanners to track Gladden down, prosecutors said. They allegedly ambushed her on a poorly lit street and shot her.

Gladden was one of seven witnesses killed in a three-year period, each before they had a chance to testify against the gang.

Investigators in some of the nation's largest urban neighborhoods say the case, now on trial in federal court, is part of a phenomenon that is slowly choking their efforts to police the streets.

They say gang members are becoming sophisticated in the use of public records and technology to wage war against witnesses and thwart local witness protection programs. Gangs seem more relentless, too, in using conventional methods.

"It's getting to the point where I struggle with what to tell people who are thinking about whether they should testify," said Sgt. Ray Rodriguez, a gang unit specialist in East Los Angeles.

The result, often, is silence.

In the 1950s and 1960s, it was the mafia that confounded police with inside connections, rooting out witnesses and jurors. Their method was simple: bribe police for information.

Now, police say street criminals have perfected ways of hunting witnesses that are less dependent upon inside sources.

Nationally, the Justice Department estimates witness intimidation has been growing since 1990 and is now a factor in about two-thirds of violent crimes committed in some gang-dominated neighborhoods.

The prey: residents of their own neighborhoods.

"They use license plate numbers, whatever scraps of paper they can to get an address," said Peter Zeidenberg, an assistant U.S. attorney who is trying seven members of the K Street Crew for the murder of Gladden and six other witnesses. "They were ruthless, they were sophisticated and they were efficient."

Much of the case relies upon the statements of those who never made it to the trial.

The hunt for Gladden began with a phone number on a scrap of paper that gang members somehow found, according to prosecutors.

Prosecutors say gang members punched the number into an Internet database and matched it with addresses near their neighborhood. Many online services let people get personal information on someone by using only a name, phone number or address.

With the address in hand, getting a name was easy.

Gang members intimidated people in her neighborhood, mapped out her movements, shadowed her friends across town and bought radio scanners to monitor conversations of officers patrolling the neighborhood, investigators say.

The trail led to Gladden. She was gunned down while running errands with friends.

According to court records, the K Street Crew also found witnesses by cross referencing bits of information with voter registration cards and marriage licenses.

Gang members are using public resources and technology in other places as well.

In Los Angeles, assistant district attorney Jennifer Snyder says gang members recently took a tidbit of information about a witness and then used house and car titles to pinpoint the witness' home.

Just five years ago, such a search would have taken weeks and some amount of record searching know-how. Today, the title office operates under a CD-ROM system, which can provide computerized records in seconds.

"Technology is part of the language of youth," said Snyder, who speaks at seminars about witness protection. "They have access to public information at school and at the library. They've made the link between technology and crime and we have to respond."

In Philadelphia, gang members have combed through police reports to extract witness names, which sometimes are included. They also use e-mail to stay in contact with their franchises in nearby towns, trading descriptions of witnesses they believe have been moved by police.

Philadelphia officials recently offered $50,000 to entice witnesses to come forward after a gang shootout left seven dead. Those who knew the most did not step up, police say.

"It is the reputation for intimidation that is keeping people quiet," said Lynne Abraham, Philadelphia district attorney. "It happens so much that it has become a part of our neighborhoods."

And witness intimidation in high profile cases adds to the fear, regardless of how the witnesses were found.

An 8-year-old boy was murdered in his Bridgeport, Conn., home in 1999 after agreeing to testify against an alleged drug dealer.

Four witnesses to the killing of a Chicago police officer reversed their testimony on the stand in February, leading to a mistrial.

With every death, with every incident of changed testimony, the silence spreads.

In East Los Angeles, Rodriguez the detective has a hard time making "the sell."

Walking toward a potential witness' home, he tallies the reasons why someone might choose to take the stand.

Civic duty. Social justice. Compassion for the victim's family.

He doesn't push as hard as he used to when told, "I didn't see anything, I don't know anything."

"How can you guarantee safety when every night there is a new story about a witness killed before a trial?" Rodriguez asks.

Of the six cases on Rodriguez's desk, only three contain witness testimony. The rest rely on police testimony and circumstantial evidence, and Rodriguez says they may be rejected by the district attorney for lack of evidence.

"You do what you can to make them believe that there is some inherent good in not being silent," Rodriguez said of potential witnesses. "You hope they believe in participating in the fight for their community. But at the same time you don't lie - you don't try to tell them there isn't a very real danger."

He laments that witness protection, offering people many nights away from family in a cheap hotel room, does little to entice people to testify.

"The problem with witness protection is that, at some point, the person wants to go home," Rodriguez said. "Gangs have long memories and just because the case is over, doesn't mean the danger for the witness is gone."

Witness murders help create neighborhoods of frightened people who won't talk - sometimes, not even to each other.

Gladden's housing project is one.

Along a street that shares nothing except a name with Washington's K Street power corridor in another part of town, residents spend as much time as they can inside their homes.

Outside, gang members and dealers posture on the corner and perch atop cars. Some smoke marijuana. Many of them sell it.

Not a single window has opened blinds. Several homes have signs hanging on the doors with messages such as "Don't smoke, no thanks."

"They are vicious killers," said Katherine Jackson, a single mother of three children. "And it just works better to keep to yourself and not talk about anything you see. It didn't always used to be that way."

Once, a street sensibility allowed mothers to feel safe about letting children play outside even with drug dealers around. "You didn't hurt your own," said Lamesha Davenport, another resident.

But that sensibility has been shattered.

The gang members revel in the silence.

"We take care of this hood," said Jerome, a 17-year-old selling drugs in the dusty courtyard. Jerome, who would not give his last name, says he's proud to be a member of the K Street Crew.

"We are better able to protect each other than the police," he says. "The police try to play us off each other and we don't take that."

Actually the Fundamental Baptists believe that any saved christians will be raptured out, to Heaven, at the beginning of the seven year tribulation period, during which the false christ will reign. 3 1/2 years of false peace, and 3 1/2 years of WAR. We believe the Bible is the inerrant Word of God, and it should be taken literally. Thats the fundamentalists beliefs anyhow.

Anyone not saved, or born again, after hearing the Gospel, will be eternally damned once the Rapture happens. The only people born again during the tribulation will be people that have never heard the Gospel or the Word of God. We also believe the mark to be very physical, having been said in the Bible. It will be required to purchase anything during the Tribulation period, food, clothing, water, etc... I would put it this way. The Bible says do one thing, but most do another. If I were a gambling man, I would go out and party until I died, but if I were wrong, the price is eternal pain and suffering. However if I stick to the Bible, and stay with God, and I am wrong, then nothing happens, I just die, but if I am right, then I am rewarded with eternal life.

Rick,

It isn't hard to make your own interface for a few pounds if you have basic skills with a soldering iron. You would need to buy an OS8200 cable from AOR/Javiation/Lowe or whichever AOR dealer you prefer to deal with. Total cost would be under £20 and you can make the interface far more flexible than commercial units. There are plans on several websites

If you'd rather purchase an interface cable then I'd recommend the JAV-232 from Javiation as it is more flexible and adaptable to other radios.

Tigger

Yup...it's superior allright! I like the fine Chinese craftsmanship of the southern regions. The northern region made Pro-92 is put together by prison labor pools that do not pay as much attention to detail like the BC245 which uses the orphan labor pool. The child labor pools are much stricter and the smaller hands of the workers ensure less damage to pc boards.

Regarding needing the bracket for the 760 ...

You might be better-off with a universal mounting bracket, available from Radio Shack and many other sources.

The original bracket is nice, but the screw holes are extra-large ... a pair of rubber bushings and plastic collars came with the original bracket knurled screws. They wear out over time ... although they didn't scratch the scanner's sides.

I guess that I am running into hardshell or other non standard
Baptists. They are very focused on the Beast (and not focused
on God), worry about surviving the Tribulation. That is not standard
beliefs that most Christians have been taught. And from what I
understand, even the Catholic church believes much as you do.

But look around us. There are a lot of fundamentalist type Christians
here on the NGs who are very fearful of government, see the "Beast"
in everything. It is like they do not trust God, or something.

That was why I made my comments. Especially after the guy made
the smart remark as to "where I was going to wear the mark". Sorry
but too many gun owners, ham radio operators and such have these
types of fears. False teaching, I guess.

The help is for a BC780XLT. The system is a Type 2 800. I have programmed the frequencies pressed on TRUNK until is beeped twice after each frequency. I have also programmed IDs in three scan lists for different troops. All three troops use the same frequencies. Here is the problem. while scanning, I hear nothing or see nothing if TRUNK is showing in the display. If I remove TRUNK in the display, scanning stops on the frequency and, then I am able to hear conversation between the dispatcher and patrols. That is all I hear. What didn't I do correctly? TIA

FS: Yaesu VR-120 hand held receiver. 640 memory channels
comes with box, manual, antenna and belt clip. This is
a wide range communications receiver. Asking $150 shipped
from NJ. Hate to sel, but must to help raise cash for another
radio purchase.

1452. Programming trunked freq's problem

Newsgroup: rec.radio.scanner

Source record: 67887

By using a BC 870 xlt I'm trying to monitor a trunked setup however, I am not able to receive anything.
I have believe everything is set up correctly.

All channels programmed in order (as recieved from various pages which all match)

Scan is set to trunked. (Been toggling back and forth between wide and narrow)

Set to Scan search

Confused

PS I'm in range of two of the repeaters so not hearing conventionaly isn't an issue

Kenwood RZ-1

Nice scanner from the 80's. No longer available over the usual supply chain
but cheap to get as a vintage scanner. Covers the range from approx. 500kHz up
to 920MHz. I am using several of them since more than 10 years and I am very
satisfied.

Regards
Howard

the only thing you can really do is try another sanner. sounds to me as a image of the 900Mhz. my yaesu FT-8000r did the same thing around that frequency. when you hear that persom on 1247.2875 scann the 900 band. That frequency step looks like it too. Not many hams have the 1 gig radios yet.

I know what you mean and I did get a bracket for this scanner and actually drilled 2 new, smaller holes in it and took some rubber bushings to help keep it nice and secure. Work great, plus where I needed to mount it in my truck, I didn't need that big gap in between the bracket and the top of the scanner, so making new holes made it fit nicely where I mounted it. Thanks again for the reply.

Re-enter your frequencies. After all are entered press and hold the TRUNK button for two seconds, you will hear 2 beeps and either a M or E right will appear under the channel number on the top left side of your display, press SEARCH. Another possible problem might be the data channel. A lot of departments change their data channels from time to time. Look up the frequencies assigned and check for the data channel and add that to your entered freq's. If you are lucky they will add it to the first slot. Sometimes the BC870XLT can be tricky to program, but it is a very good monitor.

Ya...no shit...What a bunch of bozo's.

Most PD's in the first world counties and states deal with this request a lot. There are procedures in place and the police in California seem to respect a FOIA request in a proper and timely manner.
I have filed probably 20 or so...
One department asked for a 2 page form,another 5 questions on a 3x5 card...and another took a request a very polite request over the phone and provided a free copy in about 18 hours from the time of the request.

Message-ID: <3ac0f875.13839500@news.earthlink.net>
Source record: 67801

Has anyone had any experience using the "through-the-window" antennas that mount on either side of an automobile window. I cannot find a convienent way to get a cable into the cab of my new truck and a friend recommended the "through-the-window" antennas.

If the description is not clear, I am referring to the antennas that look like cell phone antennas. There is an outside mount and an inside mount, both of which glue to the window. Somehow, the antenna passes signals through the glass.

Thanks.

Yes, a similar case happened recently when they finally pulled over a suspected drug dealer after following him around for over 3 HOURS. The recording was used to show the police were engaged in harassment as well as unreasonable search.

The car involved was driven by an off duty officer who "accidentally" (except it was set up over the police radio) cut off the other driver causing him to "brake suddenly" which the police used as an excuse to pull him over, and of course the drug sniffing K-9 just "happened" to be in the area and the dog was "allowed" to wander by the car.

Needless to say, the dog did react, but NO drugs were discovered. He sued to the tune of $400,000.

The town is now looking at a trunked 800Mhz system because normal scanners won't track a conversation which jumps from channel to channel.....except of course the NEW scanners which are designed to do exactly this...

Hugo, they'd still do it, because it would create deterrence for the next
witness thinking about talking to the cops.

Most of those gangs are really early forms of organized crime-- what the Mafia was in the 20's and 30's, having outgrown their streetgang roots.

And because they have huge amounts of money, they can afford technology and they can afford to learn how to use it effectively, just like the Mafiosi did.

And, while that article discounts purchasing inside information, the fact
of the matter is that the amount of cash they've got is more than enough to entice crooked cops to divulge confidential information. Policework is becoming more and more corrupt as time goes on, and the probability of being able to find a corrupt cop increases as things degenerate. And the gang bangers, having more than a little insight into the nature of human vice from close contact with their customers, are as competent at entrapment and recruitment as the old KGB was. Money and ruthlessness make lots of things possible, and suborning cops is one of them. The Ramparts situation is just the tip of the iceburg.

And if you think that the gangs are bad now, give em another 20 years to send their little brothers to college like the Mafiosi did, and see just how sophisticated they become.

They're not stupid to begin with and with time and experience they'll only get smarter.

You guys are assuming that the gangs are really gangs when they're not. They've outgrown that. They retain some of the trappings from their old streetgang days, but they're really crime syndicates like the Mafia was in the 20's and 30's. And because of that, those tapes won't mean a thing because they'll still kill the witnesses to make a point to anyone else who might want to consider testifying.

Yes, a month after installing it the antenna fell off. The reception for
scanning is horrible.

> Sorry ...no digital scanners....even in the near future

Sorry, digital (APCO 25) is not a mystery. All that is needed is a C4FM demodulator (available!) and a IMBE Vocoder (available!)

OK, it might not be as easy as just hooking these 2 devices up together, but the basic building blocks and technical info are available.

A Digital scanner is not too far off!!

Mike

since changing my yupi 9000 MK1 for a MK2, I have noticed that when scanning I can hear faint scratchy noises even though the squelch is turned up.

I get them not only when scanning but also when I stop on certain frequencies.

Is this a fault with the scanner or is it normal? I never heard this before with my previous scanners.

Chris

Hi folks,

Just wondering if there are any recommendations for a good two-way install shop in Brooklyn or Queens (or thereabouts). I bought a new remote-head Yaesu FT-90R recently, and I'd like to find someone who knows how to do neat, clean installs in high-end cars.

While I could do the job myself, it would likely end up quite messy. My installs always work well, but I've always been a bit of a klutz around cars, and especially working under the dash of modern vehicles--no thanks <grin>.

Any help in the next couple of days would be tremendously appreciated as I was hoping to take a quick vacation this weekend. If replying by e-mail please reply only to the address in my .sig and not the reply-to address.

Thanks again.

Cheers, |The Second Edition of my book

I love it.
In an attempt to keep the public from monitoring a service that they pay for, those in charge are tring a new system that smells a lot like "vaporware". A product that never quite seams to work. That is always "going to be fixed".
I always try to bass my comms on KISS.
Keep it simple, stupid.
Complex system are pie in the sky fantasies.
The evil empires (Motorola{AKA the Batwing}/GE-Eriksonp-etal) having sold all the conventional comm system that the world really needed, and faced with a saturated market, came up with fantasticly expense and complex ssytems to help their lagging sales.
And us the tax paying sod gets screwed by our governments paying large amountsof money for systems that just do not work.
Back in Lexington the US MArshall service had "secures" radios. Sadly the battery drain was so bad that thye had ot run in the clear to get any battery life on thier HTs. I loved it.

1484. Weird Signal NOW -- 154.9200 MHz CLEMARS in So California

Newsgroup: rec.radio.scanner
Date: 2001-03-28 01:31:18 UTC
From: brian@pipeline.com
Message-ID: <a0CMEp1043fo0@pipeline.com>

Cross-posted to: rec.radio.scanner,alt.radio.scanner

If anyone catches this message within the next minutes/hours, check out CLEMARS 154.920 MHz anywhere in the L.A. area. A very bizzare "jamming" signal has been on the frequency for the last hour. It's full scale in the San Gabriel Valley (good signal without any coax/wick antenna on my PRO-2006), and a friend all the way in Hemet reports it's audible out there.

Anyone ever heard this kind of a signal before? Has a very bizzare oscillating "darth vader" kind of strobing sound spaced by about 1 1/2 seconds.

I installed Erricsons with RCMP in B division, that system included the M-rk's ORION's and Mark III's. The ht's had a battery life of, oh, about a week with a 10% T/R ratio. That is common place for most peace officers.

The EDACS system worked fine, no problems (less over heating of repeater stations with indoor generators)

So, I don't really see why you guys down south would have such trouble ...

To eliminate most of the incentive to murder a witness, she should be videotaped the first time she talks to police, and on every later occasion she says something new. If she should die before the trial, her testimony on the videotapes should be admissible as evidence.

You must not have cleaned the glass off as the instructions that
came with the antenna. I have been using this style antenna for
years and have not had one fall off.

Just remember that you need to get the correct antenna for the
frequency range your going to be using. Have 100 watt radios
using them all the time.

Maybe you bought one of the cheaper types that are available in
many of the crap shack type places. A good glass mount antenna
is going to run better than $30 or $40 at least.

Oh, good grief. Your defense of legalizing drugs is to point to another dangerious drug - the "that kills people so we should allow drugs to kill people" defense. Sorry, but that is hardly going to convince me to support the legalization of drugs.

To whomever wrote this - pull your hat down tight and hang on, because this discussion has just gotten started. Who know where this discussion will go or where it will end up. But it is almost certain to be one heck of a ride along the way (the religion issue is good for a few dozen posts all by itself).

First of all, I don't have so many "druggie" friends, but that also doesn't make me blind to the ones who are. And perhaps if you weren't so busy defending drug use, you might be able to honestly see what is right in front of your nose also.

And the alcohol and nicotine defense (those kill so we should legalize drugs so they can kill also) is absolute BS.

It hasn't been discredited by any "science" that I would respect, because that goes directly against what I've seen with my own eyes.

First of all, I'm "wound far too tight" because I've seen far too many people like yourself trying to start religious debates in these newsgroups. To be honest, I'm getting real tired of hearing it.

Second, where did you come up with this "your" religion bullcrap? I have never said that I was religious, or what religion I might belong to if I were. So it is "the height of arrogance to assume" that just because I don't happen to agree with you, you have the right to assign me a religion.

And, finally, I just don't buy your claimed ignorance about "the mark." Like I said, it has been featured in popular movies, music, and literature, around the world for many years. So, unless you've hid out in a cave for most of your life (no movies, television, music, or books), it would be almost impossible for you to not have seen a reference to this (not once, but a great many times).

Not that time. I was the only person, with any connection to the coast guard, that was involved. And I was there only because I was doing some public affairs stuff at the operations center and someone in the Navy liked my photographs (or their photographer was busy elsewhere, so they were desperate). Nope, while I'm sure the CG had some involvement somewhere (how else did the Navy learn about me), there were no CG personnel directly involved on that vessel.

The REAL mark of ignorance is Julia Roberts. Stop yer bickering and take time to chortle at the whole outlook.
The next mark of ignorance is Hillary Klinton....but that goes without saying.
At least Julia Roberts has breasts that can be seen and legs that are not akin to sawed-off telephone poles. She is, however, just as left-winged and equally as doltish.

I have used a Radio Shck glass mount antenna for about two months now. It has rained a lot since then and it is still holding strong. It improved reception a lot. Just be sure to get the two components alligned correctly. If they are off-center, reception will be reduced, even worsened.

You're absolutely right. Coast Guard personnel get military ID cards (the same as all other military personnel), access to all military facilities, and access to all military benefits (shopping facilities, medical facilities, on-base banking, credit unions, etc). In addition, they get paid on the same pay scale as other military personnel (with the addition of hazardious duty pay). As stated earlier, during times of war, the Coast Guard falls under the Navy.

Alcohol is a legal drug as is nicotine. If you are so taken by the damage drugs have done to your friends and family you would feel the same about these two and the horrors they have put famlies through and the many deaths they have caused. The numbers are astronomical compared to illegal drugs.

OTOH if it's just a legal issue you need not bring up the family and tragedy side, it has nothing to do with the legal issue.

> And the alcohol and nicotine defense (those kill so we should legalize
> drugs so they can kill also) is absolute BS.

Then you should be in favor of banning the more harmful legal drugs, alcohol and nicotine, right?

I think your flip to a moral stance caused it. It is hard to tell if you are taking a moral or a legal stance on the issue. Which is it?

Nice idea, but not workable. A defendant has the right to face his
accusers. Most jurisdictions do not allow depositions or video tape of dead
witnesses.

The highly organized ones already have gone that way. The others are
in a position of either adapt or get eaten.

I couldn't care less about religion and have no desire to debate it here but even if I did, the fact that you're "getting real tired of hearing it" would be of exactly zero concern to me.

> And, finally, I just don't buy your claimed ignorance about "the mark."

Just because someone doesn't immerse themselves in the garbage that currently passes for popular media hardly means they live in a cave. And I think you're being disingenuous when you claim that someone would have to forego all movies, television and books in order to be ignorant of this beast-mark concept. Is it your position that every single film produced by Hollywood makes reference to the Christian devil's mark? The same for every TV show aired and every book published? I personally read mostly biographies and historical novels and watch the History and Discovery channels almost exclusively. I have yet to come across any Christian devil mark themes evident

in those media. As for movies, I have no time for them.

And finally, my concern for whether you "buy" my claim or not rivals my concern for what you're getting tired of hearing.

That incentive would remain, but the more important incentive (beating the original murder or mayhem rap) would be gone. You assume that criminals, like soldiers in disciplined armies, "take the long view," and will make personal sacrifices on ideological grounds. That may be true for some of the best-organized gangs, but not for many neighborhood thugs who currently murder witnesses.

There is a Sixth Amendment issue, as you noted. Nevertheless, it is
worth examining whether the law might be modified, perhaps even
without the need to modify the Sixth Amendment.
(1) The accused and/or his lawyer, could be offered a videotaped
Sixth-Amendment chance to "confront" the witness during the original
"deposition" or immediately thereafter.
(2) Possibly, courts might rule that a defendent who murders a
witness has waived his Sixth Amendment right to cross-examine said
witness.
